PREFACE

Purpose

The purpose of this document is to provide customers with a description of the Optiq order entry conformance script, with scenarios for connectivity, functional data conformance and high availability tests for Euronext Cash markets.

Target Audience

This document is particularly relevant to clients that will need to perform mandatory conformance tests on Optiq Cash order entry, i.e. :

- Member developers;
- Technology providers (Independent Software Vendors and Application Service Providers ASPs);
- Liquidity Provider trading members using an ISV/ASP provider solution.

What's new?

The following lists only the most recent modification made to this revision/version.

REVISION NO./ VERSION NO.	DATE	AUTHOR	CHANGE DESCRIPTION
1.5	27 December 2018	Euronext	Including scenarios for submission of Large In Scale Orders
1.6	13 January 2019	Euronext	Including scenarios for submission of RFQ model on COB
1.7	14 April 2020	Euronext	Review
1.8	15 February 2021	Euronext	Block MTF message update (WFL)
1.9	11 February 2022	Euronext	Removal of collar breach confirmation on SBE and Confirm Flag on FIX protocol; removed GTT Test case
1.9.1	26 September 2022	Euronext	Added RiskGuard Controls
1.9.2	2 January 2023	Euronext	Review

Associated Documents

The following lists the associated technical documents, which either should be read in conjunction with this document or which provide other relevant information for the user:

- Technical specifications
 - Euronext Cash Market – Optiq Kinematics Specifications
 - Euronext Cash Markets – Optiq OEG Client Specifications – SBE Interface
 - Euronext Cash Markets – Optiq OEG Client Specifications – FIX 5.0 Interface
 - Euronext Cash Markets – Optiq MDG Client Specifications
 - Euronext Cash Markets - Optiq & TCS Error List
 - Euronext Cash Markets - Optiq OEG Connectivity Configuration specifications
 - Euronext Cash and Derivatives Markets - Optiq File Specifications
 - Euronext Cash Markets – Optiq High Availability and Business Continuity

- Technical Inputs:
 - Euronext Cash Markets – Optiq OEG SBE Template
 - Euronext Cash Markets – Optiq MDG SBE Template

CONTACT

Please find below the Optiq Migration contact details, which has been established to ensure customer readiness by:

- sending information to customers
- answering customers' questions
- assisting customers in their testing and validation on the EUA environment
- providing follow-up on customer conformance testing
- assessing customers' state of readiness with regards to technical changes

Optiq Migration team

Tel: +39 02 4541 1399, press 1

Email: optiqmigration@euronext.com

TEST SCENARIO EXCEPTION POLICY

Customers only need to complete the test cases relating to the functionality that they will use on the Live Services. If a customer's application does not support the functionality described in a particular test scenario and they do not intend to complete the scenario during the test, this must be agreed before the start of the certification test.

NON-CONFORMANT BEHAVIOR ON THE LIVE SERVICE

Any non-conformant behaviour by a customer's software application on the Live Services may lead to the software application being disconnected and not re-connected until it has been re-certified and the non-conformant behaviour corrected.

CONFORMANCE TEST GUIDELINES

The Certification Process is an integral part of the Certification Programme Mandatory testing will be required for all applications that wish to connect to the production environment and mandatory functions will need to be tested in order to confirm conformant behaviour.

Customers should consider their software application's 'production ready' before attempting the test. Customers should also read and familiarize themselves with this document and the Market and Product Specific Testing documents..

Before Taking the Test

Before taking their conformance tests, Clients are required to thoroughly test the new or upgraded trading application's interaction, basic functionalities and connectivity on the Euronext External User Acceptance (EUA) platform by themselves.

Prior to conforming their software solutions, customers are required to have completed the following tasks:

1. Connect to the p-EUA environment using the connectivity guidelines document for support.
2. Develop, test and validate their software solution, using the specifications for support
3. Confirm successful connectivity to the new Exchange File Server (EFS) to access Standing Data Files
4. Request an appointment for the coordinate test part via the Connect portal

Customers should identify all test scenarios supported by their application and complete the full set of uncoordinated test cycles before booking through the webform a slot to complete the coordinated test cases with Optiq migration analyst.

Customers are invited to book coordinated conformance test part with an Optiq analyst using the following form on the Connect portal

<https://connect2.euronext.com/en/form/conformance-test-booking-bit>

Scheduling an appointment with a Optiq Migration Analyst needs to be done at least two working days in advance via email. Conformance tests can take place at the following times:

Day	Time (CET)
Monday	9 am – 5 pm
Tuesday	9 am – 5 pm
Wednesday	2 pm – 5 pm
Thursday	9 am – 5 pm
Friday	9 am – 5 pm

No conformance test will take place on Wednesday morning as the p-EUA platform is closed for maintenance until 13:00 CET

Optiq Migration analyst will confirm to the customers a time slot available and provide Optiq Certification Test Report.

Customers must identify the test scenarios supported by their application, by ticking the relevant boxes on the Optiq Certification Test Report and point out the test results providing all the details for each of the uncoordinated test cases by filling in the "Customer Comments" field available.

Optiq Certification Test Report must be sent to optiqmigration mailbox before the assisted slot assigned for coordinated test cases.

All test cases (both uncoordinated test cases and coordinated test cases performed with an Optiq migration analyst) must be completed within the same day.

Customers must perform all of the steps in each of the test scenarios and record the results in the relevant sections of the Optiq Certification Test Report

When documenting the test results, customers should include all information as requested in each of the steps, such as Order IDs, QuoteMsg IDs and Security IDs.

If the result does not match the expected result, the customer should still record it in the relevant section of the certification test report and in the comments section including the following:

- Order IDs/ QuoteMsg IDs (if any)
- Instrument ID
- Time of the order/quote/operation submission/execution

Unless a log off or disconnect request is specified in the test case the customer should complete all test cases without logging off or disconnecting. If there are any unexpected log offs or disconnects, these should be documented in the comments section of the certification test report.

When conformance tests do not require an appointment with an Optiq Analyst, Clients are required to:

- Test their application by following dedicated test script and
- Provide the results of the tests to Optiq migration team, usually through a web form on the Client’s Connect interface.

To help rationalize the testing, the conformance test is split into three type: Full, Light and Functional Test

- “Full Conformance test” offers a style test that examines all functional and technical aspects available for the platform/market the client is conforming to. It will allow customers to validate the full scope of the Optiq order entry gateway (OEG), taking into account all message types that will be offered. This testing will be made available across all markets, and across all product types.
- “Light Conformance test” is offered only to existing customers that had passed already a full conformance tests and wish to implement new functionalities for a particular platform/market. During light conformance testing, only limited functional messages are tested
- “Functional test”: Software already certified and no developments made, Clients must be filled out the dedicated webform and tested all functional messages used in production environment. Functional test webform is available at the following link [BITA Optiq Migration Functional test webform | Connect \(euronext.com\)](https://euronext.com)

The table below details the different types of members and the kind of Conformance Required

	Full functional conformance	Light functional conformance	Functional test
Condition	New software / software not certified yet	Software already certified but new functionalities developed	Software already certified and no developments made
Approach	With an Optiq analyst, needs to be booked through webform	With an Optiq analyst (if there are any coordinated test), needs to be booked through webform	Offline/self-certification
Confirmation	Confirmation provided by Optiq Migration team Certification Excel report to be filled out with client with all details about uncoordinated test cases Optiq Analyst will provide feedback to the Client with Conformance process result.	Confirmation provided by Optiq Migration Team Certification Excel report filled out by Clients with all details about uncoordinated test cases Optiq Analyst will provide feedback to the Client with Conformance process result.	Online webform
Scope	All message types offered in OEG / all features that are supported	Limited number of functional messages, only features that were developed	Limited number of functional messages

During the Test

During the conformance test, the Optiq analyst will guide and support customers through the different coordinated test cases.

Customers should save a copy of the test report as they will be required to use it during the test to record their test results.

Customers should record the test results on Optiq Certification Test Report will be the conformance scripts.

If the customer faces issues during the conformance test that are related to their development of the software, the Optiq analyst will end the conformance test and ask the customer to make a new conformance appointment once the software is developed and tested again

After the Test

Following the conformance test, the Optiq Analyst will review the results of each test script to ensure that the test steps within each test script have been completed correctly and match the anticipated results. Once these two requirements are complete, the Optiq Analyst will provide feedback to the Client. If the test is successful, the Client will receive a certificate including the results of the conformance test and certifying the test was successfully completed. If the test is unsuccessful, the Client will receive feedback on where the test failed and why. The Client will be expected to make the necessary changes to its trading application and to pass the failed part of the conformance test again. The Client may directly liaise with the Optiq Analyst if there is a perception that the issue causing the failure is linked to the conditions of the test environment.

The following items are checked:

- The functional behaviour and message sequencing in each scenario
- If the session was maintained for the entire period or if it dropped
- If any errors were produced over the time period

SCOPE OF MESSAGES AND FUNCTIONALITIES

The following table describe each Optiq Segment tag. Each tag will be then used for each message to specify on which Optiq Segment this message applies to. If there is no tag, the test applies to all segments.

Optiq Segment	Tag
Equities	EQ
Funds	FUND
Fixed Income	FRM
Warrants and Certificates	SP
Irish Bonds and Funds	IBF
Block	BLK
Drop Copy	DC

1. MDG Lite

1.1 MDG Lite - Logon

TEST CASE ID	1.1
REQUIRED MDG Login messages	Logon (1)
MANDATORY	Yes for MDG Lite customers
ASSISTED	No

Customer need to confirm that MDG Logon works properly

Instruction

Clients initiate a TCP/IP session to the MDG Lite Gateway, and then initiate a logon by sending the MDG Logon (1) message.

The Logon (1) message must be the first message sent by the client otherwise the MDG Lite Gateway will drop the connection. The MDG Logon message includes a repeating group through which the client can specify a combination of MDG Lite feeds which intends to receive.

Success Criteria

Customer confirm that logon works properly and they receiving market data

2. SOFTWARE IDENTIFICATION

2.1 IN HOUSE SOLUTION IDENTIFICATION

TEST CASE ID	2.1
REQUIRED SBE MESSAGES	Logon (100) Software provider
REQUIRED FIX MESSAGES	Logon (A) SoftwareProvider (21050)
MANDATORY	Optional
ASSISTED	No

The approach consists of populating a dedicated field called “Software Provider” that exists in both SBE and FIX OEG messages as follows:

For an In house solution : To identify as being in house and provide transparency of versioning.

Instruction for SBE

The customer submits a Logon (100) message , making sure the field Software Provider will be filled using 8 characters in total, the three first Digits must be filled with Zeros and the remaining 5 characters must contain the versioning of your API solution.

0	0	0	Y	Y	Y	Y	Y
---	---	---	---	---	---	---	---

Success Criteria for SBE

The Optiq Analyst confirms a successful login.

A Logon Ack (101) message is sent by OEG providing the Exchange ID and the last message received from the client.

Instruction for FIX

The customer submits a Logon (A) message , making sure the field Software Provider (21050) field will be filled using 8 characters in total, the three first Digits must be filled with Zeros and the remaining 5 characters must contain the versioning of your API solution.

0	0	0	Y	Y	Y	Y	Y
---	---	---	---	---	---	---	---

Success Criteria for FIX

The Optiq Analyst confirms a successful login.

A Logon Ack (A) message is sent by OEG providing the Exchange ID and the last message received from the client.

2.2 ISV SOLUTION IDENTIFICATION EQ FUND FRM SP **BLK**

TEST CASE ID	2.2
REQUIRED SBE MESSAGES	Logon (100) Software provider
REQUIRED FIX MESSAGES	Logon (A) SoftwareProvider (21050)
MANDATORY	Optional
ASSISTED	No

For an ISV solution: To identify the ISV provider and provide transparency of versioning.

The approach consists of populating a dedicated field called “Software Provider” that exists in both SBE and FIX OEG messages as follows:

Instruction for SBE

The customer submits a Logon (100) message , making sure the field Software Provider will be filled using 8 characters in total, the three first Digits must be filled with the appropriated prefix assigned by the Exchange and the remaining 5 characters must contain the versioning of your API solution.

X	X	X	Y	Y	Y	Y	Y
---	---	---	---	---	---	---	---

Success Criteria for SBE

The Optiq Analyst confirms a successful login.

A Logon Ack (101) message is sent by OEG providing the Exchange ID and the last message received from the client.

Instruction for FIX

The customer submits a Logon (A) message , making sure the field Software Provider will be filled using 8 characters in total, the three first Digits must be filled with the appropriated prefix and the remaining 5 characters must contain the versioning of your API solution.

X	X	X	Y	Y	Y	Y	Y
---	---	---	---	---	---	---	---

Success Criteria for FIX

The Optiq Analyst confirms a successful login.

A Logon Ack (A) message is sent by OEG providing the Exchange ID and the last message received from the client.

3. ALGO IDENTIFICATION

3.1 ISV ALGO IDENTIFICATION EO FUND FRM SP BLK IBF

TEST CASE ID	3.1
REQUIRED SBE MESSAGES	New Order (01); Ack (03)
REQUIRED FIX MESSAGES	NewOrderSingle (D); ExecutionReport (8)
MANDATORY	Yes for ISV solutions
ASSISTED	No

Approach

The Algo Short code assignment will be managed as follows

- The negative range of short codes are allocated for ISV Algos.
- In order to avoid conflicts between multiple ISV, each ISV will be given a dedicated range to use for Algo Short code assignment .
- Once defined, the Algo Short Code should be transmitted by the ISV to the clients behind.

For an ISV solution: A dedicated prefix will be sent from Euronext CAS service XXX to Each ISV.

ISV prefix range from -001 to -213 as per 4 bytes decimal digit representation format (- 2,147,483,646 ...- 1).

ISV must assign his Algo ID short codes in the following negative range where XXX is the ISV prefix :

Instruction for SBE

The customer submits valid and correctly formatted New Order (01) message, making sure the field ClientIdentificationShortCode will be filled using the appropriated ISV prefix assigned by the Exchange

-	X	X	X	0	0	0	0	0	0	0
---	---	---	---	---	---	---	---	---	---	---

-	X	X	X	9	9	9	9	9	9	9
---	---	---	---	---	---	---	---	---	---	---

Success Criteria for SBE

The Optiq Analyst confirms a successful new Order message, and validate the ClientIdentificationShortCode Field was populated.

Instruction for FIX

The customer submits valid and correctly formatted New Order (D) message, making sure the field ClientIdentificationShortCode will be filled using the appropriated ISV prefix assigned by the Exchange

-	X	X	X	0	0	0	0	0	0	0
---	---	---	---	---	---	---	---	---	---	---

-	X	X	X	9	9	9	9	9	9	9
---	---	---	---	---	---	---	---	---	---	---

Success Criteria for FIX

The Optiq Analyst confirms a successful new Order message, and validate the ClientIdentificationShortCode Field was populated

4. CLIENT ORDER ID MANAGEMENT

4.1 NEW ORDER

TEST CASE ID	4.1
REQUIRED SBE MESSAGES	New Order (01);
REQUIRED FIX MESSAGES	NewOrderSingle (D);
MANDATORY	Yes
ASSISTED	No

Depending on the nature of the client access, the *Client Order ID* must respect some constraints as described below.

Moreover it is recommended that clients implement their own configurable prefix in order to allow firms to integrate several application instances easily and ensure *Client Order ID* uniqueness across all the firm orders.

Regular Access: when a firm contracts its own and exclusive order entry access means directly with Euronext, the Firm Trading Solution type is Regular Access (or sometimes Direct Access) :

- **Regular “In House” Accesses** (i.e. non via ISV nor using Service Bureau) : Must specify a ClOrdID value in the positive number range.
- **Regular Accesses via ISV** without use of Service Bureau:
 - The ISV must specify a ClOrdID value in the negative number range with the unique 3-digit number prefix assigned by the exchange. Numerically it means that clients are restricted to a range from -XXX0000000000000000 to -XXX9999999999999999, where XXX is their ISV ID.
 - The correct use of the ISV ID and range is checked by the exchange during the conformance test, however afterwards the OEG will not perform any checks of the correct assignment of the ID or range in the inbound application message.
 - A dedicated prefix will be sent from Euronext CAS service XXX to Each ISV.

Service Bureau Access: when a third-party customer, which may, among others, refer to a Service Bureau, contracts order entry access means with Euronext to act as an order carrier on behalf of several firms, the Firm Trading Solution type is Service Bureau Access.

- The Service bureau must specify a ClOrdID value in the negative number range with the unique 3-digit number prefix assigned by the exchange. Numerically it means that clients are restricted to a range from -XXX0000000000000000 to -XXX9999999999999999, where XXX is their Service Bureau ID.
- The Service Bureau ID is provided by the Euronext CAS service and is checked during the conformance test and is also checked and enforced at the OEG level for each inbound application message.
- **Instructions for SBE and FIX:** Customer sends order with valid prefix in the client order id field.
- **Success Criteria for SBE and FIX:** Optiq Analyst confirms that field Client Order Id / ClOrdID (tag 11) has the correct prefix
 - a. Optiq Analyst confirms ClOrdID has a negative value
 - b. Optiq Analyst confirms ClOrdID has the correct prefix

5. ADMINISTRATION MESSAGES

5.1 LOGON

TEST CASE ID	5.1
REQUIRED SBE MESSAGES	Logon (100)
REQUIRED FIX MESSAGES	Logon (A)
MANDATORY	Yes
ASSISTED	No

Instruction for SBE

The customer submits a valid and correctly formatted Logon message to log into their OEG session with the following fields for **SBE**:

- Logical Access ID
- OE Partition ID
- Last Message Sequence Number: For the first connection of the day it should be set to zero (0). However, it will be the Sequence Number of the last message received by the client from the Exchange on a specific OE session.
- Software Provider (Mandatory for customers using a software Provider)
- Queuing Indicator set to 0 or Queuing Indicator set to 1

Success Criteria SBE

The Optiq Analyst confirms a successful login, this consists of a logon and then a logon confirmation.

A Logon Ack (101) message is sent by OEG providing the Exchange ID and the last message received from the client.

Instruction for FIX

The customer submits a valid and correctly formatted Logon message to log into their OEG session with the following fields for **FIX**:

- LogicalAccessID (21021)
- OEPartitionID (21019)
- NextExpectedMsgSeqNum (789): for the first connection of the day it must be 1. However it will be the sequence number of the last message received by the client from Exchange on a specific OEG session.
- SoftwareProvider (21050) – (Mandatory for customers using a software Provider)
- QueueingIndicator (21020) =0 or Logon with QueueingIndicator (21020)=1
- DefaultApplVerID (1137)= 9
- EncryptMethod (98)= 0

Success Criteria for FIX

The Optiq Analyst confirms a successful login. A Logon (A) message is sent back by OEG with the sequence number of the last message received from the client.

5.2 LOGON REJECT

TEST CASE ID	5.2
REQUIRED SBE MESSAGES	Logon Reject (102)
REQUIRED FIX MESSAGES	Reject (3)
MANDATORY	Yes
ASSISTED	No

Instructions for SBE:

- 1- The customer initiates an OEG session with a wrong Logical Access ID
- 2- The customer initiates an OEG session with Queueing Indicator not sent / set
- 3- The customer try to logon with a LogicalAccessID which is already connected.
- 4- The customer try to logon with a LastSequenceNumber much higher than last sent by OEG.

Success Criteria for SBE:

- 1- Logon is rejected with Logon Reject Code= 1 (Unknown Connection Identifier)
- 2- Logon is rejected with Logon Reject Code= 7 (Invalid Logon format)
- 3- Logon is rejected with Logon Reject Code= 4 (Client session already logged on)
- 4- Logon is rejected with Logon Reject Code= 3 (Invalid sequence number) and Last Sequence Number field set to a given value. Then client sends his next logon where LastSequenceNumber is populated with a sequence number less or equal to this given value and he is able to logon successfully.

Instructions for FIX:

- 1- The customer initiates an OEG session with invalid Tag number .
- 2- The customer initiates an OEG session with required Tag missing
- 3- The customer initiates an OEG session with Tag NextExpectedMsgSeqNum (789) much higher than last sent by OEG

Success Criteria for FIX:

- 1- Logon is rejected with session reject reason= 0 (Invalid Tag number)
- 2- Logon is rejected with session reject reason= 1 (Required Tag is missing)
- 3- Logon is rejected with session reject reason= 10 (ReceivedNextExpectedMsgSeqNum(789) is too high) and LastMsgSeqNumProcessed (369) field set to a given value. Then client sends his next logon where the field NextExpectedMsgSeqNum (789) is populated with a sequence number less or equal to this given value and he is able to logon successfully.

5.3 HEARTBEAT EQ FUND FRM SP BLK

TEST CASE ID	5.3
REQUIRED SBE MESSAGES	HeartBeat (106)
REQUIRED FIX MESSAGES	HeartBeat (0)
MANDATORY	Yes
ASSISTED	No

Instructions for SBE: the customer should confirm the Template ID, Schema ID values sent are the same as in their Logon (100) message, and corresponds to the SBE template in use.

Success Criteria for SBE: the customer confirms regular Heartbeats are received according to the “Delay of Inactivity” defined by the exchange for the Optiq segment.

Instructions for FIX: The customer should confirm the HeartBlnt (Tag 108) setting is the same as in their Logon (A) message, and corresponds to the value defined by the exchange for the Optiq segment.

Success Criteria for FIX: The customer confirms regular Heartbeats are received according to the HeartBlnt setting defined by the exchange for the Optiq segment.

5.4 RESEND REQUEST EQ FUND FRM SP BLK

TEST CASE ID	5.4
REQUIRED SBE MESSAGES	N/A
REQUIRED FIX MESSAGES	ResendRequest (2)
MANDATORY	Yes, for FIX protocol only
ASSISTED	No

Instruction: the customer submits a valid and correctly formatted Resend Request (2) message with a nominated Begin and End Seq number.

Success Criteria: the Exchange resends messages, the customer confirms successful receipt of messages.

5.5 SEQUENCE RESET EQ FUND FRM SP BLK

TEST CASE ID	5.5
REQUIRED SBE MESSAGES	N/A
REQUIRED FIX MESSAGES	SequenceReset (4)
MANDATORY	Yes, for FIX protocol only
ASSISTED	No

Instruction: If possible, the customer submits a valid and correctly formatted Sequence Reset (4) by setting GapFillFlag (Tag 123) to 'Y' . The value in the NewSeqNo (Tag 36) will always represent the MsgSeqNum of the next message that by the Market.

Success Criteria: OPTIQ confirms successful receipt of a valid and correctly formatted Sequence Reset (4).

5.6 TEST REQUEST EQ FUND FRM SP BLK

TEST CASE ID	5.6
REQUIRED SBE MESSAGES	TestRequest (107)
REQUIRED FIX MESSAGES	TestRequest (1)
MANDATORY	Yes
ASSISTED	No

Instruction for SBE: the customer submits a Test Request (107) message .

Success Criteria for SBE the Exchange receives the Test Request. The Exchange will automatically reply with a HeartBeat (106) message. The customer confirms receipt of Heartbeat.

Instruction for FIX: the customer submits a Test Request (1) message.

Success Criteria for FIX: the Exchange receives the Test Request. The Exchange will automatically reply with a HeartBeat (0) message. The customer confirms receipt of Heartbeat with the expected TestReqID (Tag 112).

5.7 LOGOUT EQ FUND FRM SP BLK

TEST CASE ID	5.7
REQUIRED SBE MESSAGES	Logout (103)
REQUIRED FIX MESSAGES	Logout (5)
MANDATORY	Yes
ASSISTED	No

Instructions for SBE:

- a. The customer submits a valid and correctly formatted Logout (103) message to log out the OEG session, with field Log Out Reason Code = 0
- b. The customer tries to logon with a LogicalAccessID which is already connected.

Success Criteria for SBE:

- a. The customer submits a valid and correctly formatted Logout (103) message to log out the OEG session.
Optiq Analyst confirms the customer is successfully logged out.
- b. SessionStatus =103 (Client session already logged on).

Instructions for FIX:

- a. The customer submits a valid and correctly formatted Logout (5) message to log out the OEG session, with SessionStatus (tag 1409) set to 100 (Regular Logout by client).
- b. The customer tries to logon with a LogicalAccessID which is already connected.

Success Criteria for FIX:

- a. The customer confirms receipt of a valid Logout (5) message with SessionStatus=4 (Session logout complete). Optiq Analyst confirms the customer is successfully logged out.
- b. The customer confirms receipt of a valid logout (5) message with SessionStatus =103 (Client session already logged on).

6. SUBMISSION OF APPLICATION MESSAGES

6.1 NEW ORDER

TEST CASE ID	6.1
REQUIRED SBE MESSAGES	New Order (01); Ack (03)
REQUIRED FIX MESSAGES	NewOrderSingle (D); ExecutionReport (8)
MANDATORY	Yes
ASSISTED	No

Instructions for SBE: the customer submits valid and correctly formatted new BUY order message, with all mandatory and conditional MIFID II fields properly populated.

Success Criteria for SBE: the customer confirms the receipt and correct interpretation of an Ack (03) message for BUY order with Ack Type= 0 (New Order Ack) without new MIFID II fields.

Instructions for FIX: the Customer submits valid and correctly formatted BUY new order messages, with all mandatory and conditional MIFID II fields properly populated.

Success Criteria for FIX: the customer confirms the receipt and correct interpretation of an Execution Report (8) message for BUY order with ExecType (Tag 150) = 0 (New) and OrdStatus (Tag 39) = 0 (New) .

6.2 TRADE – FULL EXECUTION

TEST CASE ID	6.2
REQUIRED SBE MESSAGES	New Order (01); Fill (04)
REQUIRED FIX MESSAGES	NewOrderSingle (D); Execution Report (8)
MANDATORY	Yes
ASSISTED	Yes

Instructions for SBE: the customer submits valid and correctly formatted new SELL order message. An Optiq analyst will match the order entered by the client in order to generate a Full execution.

Success Criteria for SBE: the customer confirms the receipt and correct interpretation of the Fill (04) message.

Instruction for FIX: the customer submits valid and correctly formatted new SELL order message. An Optiq analyst will match the order entered by the client in order to generate a Full execution.

Success Criteria for FIX: the customer confirms the receipt and correct interpretation of an Execution report (8) message with ExecType=2 (Filled).

6.3 TRADE – PARTIAL EXECUTION

TEST CASE ID	6.3
REQUIRED SBE MESSAGES	New Order (01); Fill (04)
REQUIRED FIX MESSAGES	NewOrderSingle (D); Execution Report (8)
MANDATORY	Yes
ASSISTED	Yes

Instructions for SBE: the customer submits valid and correctly formatted new SELL order message. An Optiq analyst will match the order entered by the client in order to generate a Partial execution.

Success Criteria for SBE: the customer confirms the receipt and correct interpretation of the Fill (04) message.

Instruction for FIX: the customer submits valid and correctly formatted new SELL order message. An Optiq analyst will match the order entered by the client in order to generate a Partial execution.

Success Criteria for FIX: the customer confirms the receipt and correct interpretation of an Execution report (8) message with ExecType=1 (Partially Filled).

6.4 ORDER CANCEL

TEST CASE ID	6.4
REQUIRED SBE MESSAGES	Cancel Request (12)
REQUIRED FIX MESSAGES	OrderCancelRequest (F)
MANDATORY	Yes
ASSISTED	No

Instruction for SBE: the customer submits a valid and correctly formatted Cancel Request (12) message, with Buy or Sell side.

	ExecutionWithinFirmCode	N/A		TargetPartyID (21095)
	ClientIdentificationShortCode	N/A		TargetClientShortCode
Unsuspend	Firm	N/A	The authorizations for trading, of a given Firm, Logical Access, Trader or Algorithm (identified via the short codes), have been restored	TargetFirmID (21098)
	Logical Access	N/A		TargetLogicalAccessID
	ExecutionWithinFirmCode	N/A		TargetPartyID (21095)
	ClientIdentificationShortCode	N/A		TargetClientShortCode
Block	Firm	Instrument	Access of a given Firm, Logical Access, Trader or Algorithm (identified via the short codes) to a given Instrument has been blocked. Cancellation of the remaining open orders in the identified Instrument may be triggered depending on the setting specified in field Purge (21100).	TargetFirmID (21098)
	Logical Access	Instrument		TargetLogicalAccessID
	ExecutionWithinFirmCode	Instrument		TargetPartyID (21095)
	ClientIdentificationShortCode	Instrument		TargetClientShortCode
Unblock	Firm	Instrument	The authorizations for trading, of a given Firm, Logical Access, Trader or Algorithm (identified via the short codes), on a given Instrument has been unblocked (or restored)	TargetFirmID (21098)
	Logical Access	Instrument		TargetLogicalAccessID
	ExecutionWithinFirmCode	Instrument		TargetPartyID (21095)
	ClientIdentificationShortCode	Instrument		TargetClientShortCode
Order Amount Limit	Firm	Instrument	Order Amount Limit control has been Activated or Deactivated for a given Firm on a given Instrument. When activated, this limit is verified for each individual order message and not as cumulative value for all submitted orders. Activation or Deactivation is specified in the OSLFlag (21101).	TargetFirmID (21098)
	Logical Access			
	ExecutionWithinFirmCode			
	ClientIdentificationShortCode			

Success Criteria for FIX: the customer confirms the receipt and correct interpretation of an **ERGCommandAck (U69)** message with AckStatus (5711) set to '0' (Accept).

Instructions for FIX: the Customer submits valid and correctly formatted **GetRiskControls** messages, with all applicable fields properly populated.

	Granularity	Description	Identifier field provided
Get Risk Controls	Firm	Returns Risk Control Details per given granularity	TargetFirmID (21098)
	Logical Access		TargetFirmID (21098) and TargetLogicalAccessID
	ExecutionWithinFirmShortCode		TargetFirmID (21098) and TargetPartyID (21095)
	ClientIdentificationShortCode		TargetFirmID (21098) and TargetClientShortCode

Success Criteria for FIX: Receive **RiskControlDetails (U71)** message containing available details of the controls currently setup by that risk manager and the AckStatus (5711) is set to '0' (Accept)

Note: The user notification message sent to risk controlled entities as result of a **ERGCommandAck** are not in scope of this conformance. That message is mentioned elsewhere in this document.

7.36 NEW ORDER - IPO

TEST CASE ID	7.36
REQUIRED SBE MESSAGES	New Order (01);
REQUIRED FIX MESSAGES	NewOrderSingle (D);
MANDATORY	No
ASSISTED	No

Instructions for SBE and FIX: Customer configured as a Trading Member (Non Assigned Broker Firm) sends a private **NewOrder (01)** (FIX D) message to enter a new Buy order with a quantity of 1,000 on a IPO instrument*

Success Criteria for SBE and FIX: Optiq Analyst confirms that order is properly received and if OEG sends back a private **Ack (03)** (FIX 8) message to confirm the successful receipt and technical processing of the order.

The Cumulative **Bid Quantity** is calculated and sent to all the **Assigned Brokers** linked to the Issuing instrument thru a private **RFQ Matching Status (36)** (FIX U36) message, so that they are always aware of the state of the demand.

***Note:** in order to execute this test case, customer should ask to Optiq migration team confirmation that an IPO instrument is properly configured in pEUA environment.

7.37 NEW ORDER – OPA/TAKEOVER

TEST CASE ID	7.37
REQUIRED SBE MESSAGES	New Order (01); Order Type = 1 (Market); Time In Force = 1 (Good Till Cancel)
REQUIRED FIX MESSAGES	NewOrderSingle (D); OrdType (Tag 40) = 1 (Market); TimeInForce (Tag 59) = 1 (Good Till Cancel (GTC))
MANDATORY	No
ASSISTED	No

Instructions for SBE and FIX: Customer configured as a Trading Member (Non Assigned Broker Firm) sends a NewOrder (01) (FIX D) message to enter a new SELL private market Good Till Cancel Order on an OPA instrument*

Success Criteria for SBE and FIX: Optiq Analyst confirms that order is properly received and if OEG sends back a private Ack (03) (FIX 8) message to confirm the successful receipt and technical processing of the order.

**Note: in order to execute this test case, customer should ask to Optiq migration team confirmation that an OPA instrument is properly configured in Next EUA (pEUA) environment.*

8. SUBMISSION OF APPLICATION MESSAGES ON TCS

8.1 TRADE OUTSIDE THE BOOK

TEST CASE ID	8.1
REQUIRED SBE MESSAGES	Declaration Entry (40); Notice (42)
REQUIRED FIX MESSAGES	TradeCaptureReport (AE); TradeCaptureReportAck (AR)
MANDATORY	No
ASSISTED	Yes

Instructions for SBE:

- 1- the customer submits valid and correctly formatted Declaration Entry (40) buy or Sell, with operation type =1 (Declaration of a trade outside the book).
- 2- OPTIQ Analyst will confirm by sending a declaration Entry Buy or Sell.

Success Criteria for SBE:

- 1- DeclarationEntryAck (41) message for BUY or Sell order with Order Type= 1 (Declaration of a trade outside the book).
 - a) OPTIQ analyst will get Declaration Notice (42) message with Declaration Status= 1 (New Waiting for Counterparty Confirmation)
- 2- The customer confirms the receipt of Declaration Notice (42) message with Status = 2 (Confirmed by Counterparty) and then another Declaration Notice with Status = 7 (Filled).

Instructions for FIX:

- 1- the Customer submits valid and correctly formatted BUY or Sell TradeCaptureReport (AE) message TrdType= 1001, with all mandatory and conditional MIFID II fields properly populated.
- 2- OPTIQ Analyst will confirm by sending a declaration Entry Buy or Sell.

Success Criteria for FIX:

- 1- TradeCaptureReportAck (AR) message with TrdRptStatus (Tag 939) = 4 (Pending New).
 - a) OPTIQ analyst will get TradeCaptureReportAck (AR) with TrdRptStatus= 4 (Pending New)
- 2- the customer confirms the receipt of TradeCaptureReportAck (AR) message with TrdRptStatus (Tag 939) = 19 (Filled) will be sent to the client.

8.2 CROSS DECLARATION

TEST CASE ID	8.2
REQUIRED SBE MESSAGES	Declaration Entry (40); DeclarationNotice (42)
REQUIRED FIX MESSAGES	TradeCaptureReport (AE); TradeCaptureReportAck (AR)
MANDATORY	No
ASSISTED	No

Instructions for SBE:

- 1- the customer submits valid and correctly formatted Declaration Entry (40) side=3 with operation type= 1 (Declaration of a trade outside the book).

Success Criteria for SBE:

Optiq CASH OEG Conformance : SBE and FIX Test Script

- 1- the customer confirms the receipt of DeclarationEntryAck (41) message with Operation type=1 (Declaration of a trade outside the book).
- 2- the customer confirms the receipt of two DeclarationNotice (42) with status =7 (Filled)

Instruction for FIX:

- 1- the customer submits valid and correctly formatted TradeCaptureReport (AR) Cross message, with all mandatory MIFID II fields.

Success Criteria for FIX:

- 1- the customer confirms the receipt of TradeCaptureReportAck (AR) message
- 2- the customer confirms the receipt of two TradeCaptureReportAck (AR) message with TrdRptStatus(939):Filled

8.3 DECLARATION WITH EXPIRATION ON TIME BASIS

TEST CASE ID	8.3
REQUIRED SBE MESSAGES	Declaration Entry (40); Ack (41); Notice (42)
REQUIRED FIX MESSAGES	TradeCaptureReport (AE); Ack (AR)
MANDATORY	Yes
ASSISTED	Yes

Instructions for SBE:

- 1- the customer submits valid and correctly formatted Declaration Entry (40) buy or Sell, with all mandatory and conditional MIFID II fields properly populated.
- 2- OPTIQ Analyst will not confirm the declaration.

Success Criteria for SBE:

- 1- the customer confirms the receipt of declaration entryAck (41) message for BUY/Sell order with Order Type= 1 (Declaration of a trade outside the book).
 - a) OPTIQ analyst will get Declaration Notice (42) message for BUY/Sell order with Declaration Status= 1 (New Waiting for Counterparty Confirmation).
 - b) After 15 minutes customer and OPTIQ will receive a declaration notice with status=9 (Expiration of a pending declaration).

Instruction for FIX:

- 1- the Customer submits valid and correctly formatted BUY or Sell TradeCaptureReport message, with all mandatory and conditional MIFID II fields properly populated.
- 2- OPTIQ Analyst will not confirm the declaration.

Success Criteria for FIX:

- 1- The customer confirms the receipt of TradeCaptureReportAck (AR) message with TrdRptStatus (Tag 939) = 4 (Pending New).
 - a) OPTIQ analyst will get TradeCaptureReportAck (AR) with TrdRptStatus= 4 (Pending New)
 - b) After 15 minutes customer confirms the receipt of TradeCaptureReportAck (AR) message with TrdRptStatus (Tag 939) = 14 (Expiration of a pending declaration) will be sent to the client.

8.4 DECLARATION REJECTED DUE TO A MISSING VALUE

TEST CASE ID	8.4
REQUIRED SBE MESSAGES	Declaration Entry (40); Reject (46)
REQUIRED FIX MESSAGES	TradeCaptureReport (AE); Reject (AR)
MANDATORY	No
ASSISTED	No

Instruction for SBE:

- 1- the customer submits a Declaration Entry (40) message Buy or Sell side with a mandatory value missing (ex: Symbol Index, EMM.)

Success criteria for SBE:

- 1- the customer confirms the receipt of DeclarationEntryReject (46) message with the reject code associated.

Instruction for FIX:

- 1- the customer submits a TradeCaptureReport (AE) message Buy or Sell side with a mandatory value missing (ex: Symbol Index, EMM.)

Success criteria for FIX:

- 1- The customer confirms the receipt of TradeCaptureReportAck (AR) message with TrdRptStatus (Tag 939) = 1 = (Rejected).

8.5 CANCELLATION OF A DECLARATION BEFORE MATCHING

TEST CASE ID	8.5
REQUIRED SBE MESSAGES	Declaration Entry (40); Ack (41); Notice (42); Cancel&Refusal (43)
REQUIRED FIX MESSAGES	TradeCaptureReport (AE); Ack (AR)
MANDATORY	No
ASSISTED	Yes

Instruction for SBE:

- 1- the customer submits valid and correctly formatted Declaration Entry (40) buy or Sell, with all mandatory and conditional MIFID II fields properly populated.
- 2- OPTIQ Analyst will not confirm the declaration.
- 3- The client will cancel the declaration by sending a Declaration Cancel and Refusal (43) with Action type = 1 (Declaration Cancellation Request).

Success Criteria for SBE:

- 1- the customer confirms the receipt of Declaration EntryAck (41) message with Operation Type= 1 (Declaration of a trade outside the book).
- 2- OPTIQ analyst will get Declaration Notice (42) message with Declaration Status= 1 (New Waiting for Counterparty Confirmation).
- 3- Both customer and OPTIQ analyst will receive a declaration notice (42) with status=5 (Cancelled) the customer have to confirm the receipt of the notice.

Instruction for FIX:

- 1- the Customer submits valid and correctly formatted BUY or Sell TradeCaptureReport (AE) message, with all mandatory and conditional MIFID II fields properly populated.
- 2- OPTIQ Analyst will not confirm the declaration.
- 3- the client will cancel the declaration by sending a TradeCaptureReport (AE) message with TradeReportTransType=1 (Cancel) and TradeReportType= 6 (Trade Report Cancel)

Success Criteria for FIX:

- 1- the customer confirms the receipt of TradeCaptureReportAck (AR) message for BUY/Sell order with TrdRptStatus (Tag 939) = 4 (Pending New).
- 2- OPTIQ analyst will get TradeCaptureReportAck (AR) with TrdRptStatus= 4 (Pending New)
- 3- the customer confirms the receipt of TradeCaptureReportAck (AR) message with TrdRptStatus (Tag 939) = 2 (Cancelled).

8.6 DECLARATION REFUSAL

TEST CASE ID	8.6
REQUIRED SBE MESSAGES	Declaration Entry (40); Ack (41); Notice (42); Cancel&Refusal (43)
REQUIRED FIX MESSAGES	TradeCaptureReport (AE); Ack (AR)
MANDATORY	No
ASSISTED	Yes

Instruction for SBE:

- 1- OPTIQ analyst submits valid and correctly formatted Declaration Entry (40) buy or Sell, with all mandatory and conditional MIFID II fields properly populated.
- 2- The client will cancel the declaration by sending a Declaration Cancel and Refusal (43) with Action type = 2 (Declaration Refusal).

Success Criteria for SBE:

- 1- the customer confirms the receipt of Declaration EntryAck (41) message with Operation Type= 1 (Declaration of a trade outside the book) and the Declaration Notice (42) with Status=1 (New Waiting for Counterparty Confirmation).
- 2- Both customer and OPTIQ analyst will receive a declaration notice (42) with status=3 (Refused by Counterparty) the customer have to confirm the receipt of the notice.

Instruction for FIX:

- 1- OPTIQ analyst submits valid and correctly formatted BUY or Sell TradeCaptureReport (AE) message with Operation Type=1 (Declaration of a trade outside the book), with all mandatory and conditional MIFID II fields properly populated.
- 2- the client will refuse the declaration by sending a TradeCaptureReport (AE) message with TradeReportTransType= 2 (Declaration Refusal) and TradeReportType= 6 (Trade Report Cancel)

Success Criteria for FIX:

- 1- the customer confirms the receipt of TradeCaptureReportAck (AR) message for BUY/Sell order with TrdRptStatus (Tag 939) = 4 (Pending New).
- 2- OPTIQ analyst will get TradeCaptureReportAck (AR) with TrdRptStatus= 4 (Pending New)
- 3- the customer confirms the receipt of TradeCaptureReportAck (AR) message with TrdRptStatus (Tag 939) = 2 (Cancelled).

8.7 CANCELLATION OF A MATCHED DECLARATION

TEST CASE ID	8.7
REQUIRED SBE MESSAGES	Declaration Entry (40); Ack (41); Notice (42)
REQUIRED FIX MESSAGES	TradeCaptureReport (AE); Ack (AR)
MANDATORY	No
ASSISTED	Yes

Instruction for SBE:

- 1- the customer submits valid and correctly formatted Declaration Entry (40) buy or Sell operation type=1.
- 2- OPTIQ Analyst confirms the declaration by entering a new Buy or Sell declaration.
- 3- the client will cancel the declaration by sending a Declaration Cancel and Refusal (43) with Action type = 1 (Declaration Cancellation Request).
- 4- The customer submits a DeclarationCandR (43) message with action type =3 (Trade Cancellation Request) to request the declaration cancellation.
- 5- OPTIQ analyst reply with a DeclarationCandR (43) message with Status =3 (Trade Cancellation Request)

Success Criteria for SBE:

- 1- the customer confirms the receipt of Declaration EntryAck (41) message with Operation Type= 1 (Declaration of a trade outside the book).
- 2- OPTIQ analyst will get Declaration Notice (42) message for BUY/Sell order with Declaration Status= 1 (New Waiting for Counterparty Confirmation)
- 3- the customer confirms the receipt of Declaration Notice (42) message with Status = 2 (Confirmed by Counterparty) and then another Declaration Notice with Status = 7 (Filled).
- 4- the customer confirms the receipt of DeclarationNotice (42) with Status = 4 (Pending Cancellation)
- 5- the customer confirms the receipt of a Notice with status 5 (Cancelled)

Instruction for FIX:

- 1- the Customer submits valid and correctly formatted BUY or Sell TradeCaptureReport (AE) message, with all mandatory and conditional MIFID II fields properly populated.
- 2- OPTIQ analyst will fill the declaration.
- 3- The customer submits a valid and correctly formatted TradeCaptureReport in order to cancel the Declaration
- 4- Optiq analyst will send a cancel message on the opposite side to reply.

Success Criteria for FIX:

- 1- customer confirms the receipt of TradeCaptureAck (AR)
- 2- customer confirms the receipt of tradeCaptureAck (AR) with TrdRptStatus(939):Verified and then another TradeCaptureAck (AR) with TrdRptStatus(939):Filled
- 3- customer confirms the receipt of TradeCaptureAck (AR) with TrdptStatus (939): pending Cancel.
- 4- The customer confirms the receipt of TradeCatureAck (AR) with TrdptStatgus (939): Cancel

8.8 FUND ORDER QUANTITY

TEST CASE ID	8.8
REQUIRED SBE MESSAGES	Declaration Entry (40); Ack (41); Notice (42)
REQUIRED FIX MESSAGES	TRadeCaptureReport (AE); TradeCaptureReportAck (AR)
MANDATORY	No
ASSISTED	Yes

Instructions for SBE:

- 1- the customer submits valid and correctly formatted Declaration Entry (40) with operation Type = 4 buy or Sell.
- 2- OPTIQ Analyst confirms the declaration by entering a new Buy or Sell declaration.

Success Criteria for SBE:

- 1- the customer confirms the receipt of Declaration EntryAck (41) message with Operation Type= 1 (Declaration of a trade outside the book).
- 2- OPTIQ analyst will get Declaration Notice (42) message with Declaration Status= 1 (New Waiting for Counterparty Confirmation)
- 3- the customer confirms the receipt of Declaration Notice (42) message with Status = 2 (Confirmed by Counterparty) and then another Declaration Notice with Status = 7 (Filled).

Instructions for FIX:

- 1- the customer submits a valid and correctly formatted buy or Sell Declaration Entry (AE) with Trade Type = 1002.
- 2- OPTIQ Analyst confirms the declaration by entering a new Buy or Sell declaration.

Success Criteria for FIX:

- 1- The customer confirms the receipt of TradeCaptureReportAck (AR) with PreMatchingIndicator (10042) = 1 (Not pre-matched)
- 2- The customer confirms the receipt of TradeCaptureReportAck (AR) with PreMatchingIndicator (10042) = 2 (Pre-matched for the next fixing)

8.9 FUND ORDER CASH AMOUNT

TEST CASE ID	8.9
REQUIRED SBE MESSAGES	Declaration Entry (40); Ack (41); Notice (42)
REQUIRED FIX MESSAGES	TRadeCaptureReport (AE); TradeCaptureReportAck (AR)
MANDATORY	No
ASSISTED	Yes

Instructions for SBE:

- 1- buy or Sell.
- 2- OPTIQ Analyst confirms the declaration by entering a new Buy or Sell declaration.

Success Criteria for SBE:

- 1- the customer confirms the receipt of Declaration EntryAck (41) message with Operation Type= 1 (Declaration of a trade outside the book).
- 2- OPTIQ analyst will get Declaration Notice (42) message with Declaration Status= 1 (New Waiting for Counterparty Confirmation)
- 3- the customer confirms the receipt of Declaration Notice (42) message with Status = 2 (Confirmed by Counterparty) and then another Declaration Notice with Status = 7 (Filled).

Instruction for FIX:

- 1- the customer submits a valid and correctly formatted buy or sell Declaration Entry (AE) with Trade Type = 1003 .
- 2- OPTIQ Analyst confirms the declaration by entering a new Buy or Sell declaration.

Success Criteria for FIX:

- 1- The customer confirms the receipt of TradeCaptureReportAck (AR) with PreMatchingIndicator (10042) = 1 (Not pre-matched)
- 2- The customer confirms the receipt of TradeCaptureReportAck (AR) with PreMatchingIndicator (10042) = 2 (Pre-matched for the next fixing)

8.10 VWAP TRANSACTION

TEST CASE ID	8.10
REQUIRED SBE MESSAGES	Declaration Entry (40); Ack (41); Notice (42)
REQUIRED FIX MESSAGES	TRadeCaptureReport (AE); TradeCaptureReportAck (AR)
MANDATORY	No
ASSISTED	Yes

Instruction for SBE:

- 1- the customer submits valid and correctly formatted Declaration Entry (40) with operation Type = 5 buy or Sell.
- 2- OPTIQ Analyst confirms the declaration by entering a new Buy or Sell declaration.

Success Criteria for SBE:

- 1- the customer confirms the receipt of Declaration EntryAck (41) message with Operation Type= 1 (Declaration of a trade outside the book).
- 2- OPTIQ analyst will get Declaration Notice (42) message with Declaration Status= 1 (New Waiting for Counterparty Confirmation)
- 3- the customer confirms the receipt of Declaration Notice (42) message with Status = 2 (Confirmed by Counterparty) and then another Declaration Notice with Status = 7 (Filled).

Instruction for FIX:

- 1- the customer submits a valid and correctly formatted buy or sell Declaration Entry (AE) with Trade Type = 51.
- 2- OPTIQ Analyst confirms the declaration by entering a new Buy or Sell declaration.

Success Criteria for FIX:

- 1- the customer confirms the receipt of TradeCaptureReportAck (AR).
- 2- the customer confirms the receipt of TradeCaptureReportAck (AR) with TrdRpStatus (939): Verified followed by another TradeCaptureReportAck (AR) with TrdRpStatus (939): Filled.

8.11 SECONDARY LISTING PLACE TRADE

TEST CASE ID	8.11
REQUIRED FIX MESSAGES	Declaration Entry (40); Ack (41); Notice (42)
REQUIRED SBE MESSAGES	TradeCaptureReport (AE); Ack (AR)
MANDATORY	No
ASSISTED	Yes

Instruction for SBE:

- a. the customer submits a Buy or SELL Declaration Operation Type =7 (Declaration of a trade on a secondary listing place) on an instrument which multi listed.
- b. OPTIQ Analyst confirms the declaration by entering a new Buy or Sell declaration.

Success Criteria for SBE:

- a. DeclarationEntryAck (41) message for BUY or Sell order with Order Type= 1 (Declaration of a trade outside the book).
- b. OPTIQ analyst will get Declaration Notice (42) message with Declaration Status= 1 (New Waiting for Counterparty Confirmation)
- c. The customer confirms the receipt of Declaration Notice (42) message with Status = 2 (Confirmed by Counterparty) and then another Declaration Notice with Status = 7 (Filled).

Instruction for FIX:

- 1- the Customer submits valid and correctly formatted BUY or Sell TradeCaptureReport (AE) message TrdType= 1001, with all mandatory and conditional MIFID II fields properly populated.
- 2- OPTIQ Analyst will confirm by sending a declaration Entry Buy or Sell.

Success Criteria for FIX:

- 1- the customer confirms the receipt of TradeCaptureReportAck (AR).
- 2- the customer confirms the receipt of TradeCaptureReportAck (AR) with TrdRpStatus (939): Verified followed by another TradeCaptureReportAck (AR) with TrdRpStatus (939): Filled.

8.12 FUND PRICE INPUT

TEST CASE ID	8.12
REQUIRED SBE MESSAGES	Fund Price Input (44)
REQUIRED FIX MESSAGES	FundPriceInput (U44)
MANDATORY	No
ASSISTED	No

Instruction for SBE:

- 1- the customer submits a correctly formatted Price Input message (44).

Success criteria for SBE:

- 1- the customer confirms the receipt of FundPriceinputAck (45) message with the reject code associated.

Instruction for FIX:

- 1- the customer submits a correctly formatted FundPriceInput (U44).

Success criteria for FIX:

- 1- the customer confirms the receipt of FundPriceinputAck (U45) message

9. SUBMISSION OF APPLICATION MESSAGES ON BLOCK

8.1 NEW CONDITIONAL ORDER

BLK

TEST CASE ID	9.1
REQUIRED SBE MESSAGES	New Order (01); Ack (03)
REQUIRED FIX MESSAGES	NewOrderSingle (D); ExecutionReport (8)
MANDATORY	Yes
ASSISTED	No

Instructions for SBE:

The customer submits valid and correctly formatted new BUY DAY order message, with all mandatory and conditional MIFID II fields properly populated with:

Execution Instruction: 6 Conditional Order =1
 Dark Execution Instruction: 0 Dark Indicator=1

Success Criteria for SBE: The customer confirms the receipt and correct interpretation of an Ack (03) message for BUY order with Ack Type= 0 (New Order Ack) and Ack Phase =2 (Call Phase) without new MIFID II fields.

Instructions for FIX: The Customer submits valid and correctly formatted BUY DAY new order messages, with all mandatory and conditional MIFID II fields properly populated with:

ConditionalOrderFlag: Conditional Order =1
 Dark Execution Instruction: 0 Dark Indicator=1

Success Criteria for FIX: The customer confirms the receipt and correct interpretation of an Execution Report (8) message for BUY order with:

ExecType (Tag 150) = 0 (New)
 OrdStatus (Tag 39) = 0 (New) .
 ConditionalOrderFlag: Conditional Order =1
 Dark Execution Instruction: 0 Dark Indicator=1

Supported and Tested Successfully:

9.2 CONFIRM NEW CONDITIONAL ORDER BLK

TEST CASE ID	9.2
REQUIRED SBE MESSAGES	New Order (01); Ack (03)
REQUIRED FIX MESSAGES	NewOrderSingle (D); ExecutionReport (8)
MANDATORY	Yes
ASSISTED	No

Instructions for SBE:

1. The customer submits valid and correctly formatted new BUY DAY order message, with all mandatory and conditional MIFID II fields properly populated with:

Execution Instruction: 6 Conditional Order =1
Dark Execution Instruction: 0 Dark Indicator=1

2. To confirm his initial order customer submits valid and correctly formatted new BUY DAY order message with same quantity and same price, with all mandatory and conditional MIFID II fields properly populated with:

Execution Instruction: 6 Conditional Order =0
Dark Execution Instruction: 0 Dark Indicator=1

Success Criteria for SBE: The customer confirms the receipt and correct interpretation of an Ack (03) message for BUY order with Ack Type= 0 (New Order Ack) and Ack Phase =8 (Random Uncrossing Phase) without new MIFID II fields.

Instructions for FIX:

1. The Customer submits valid and correctly formatted BUY DAY new order messages, with all mandatory and conditional MIFID II fields properly populated with:

ConditionalOrderFlag: Conditional Order =1
Dark Execution Instruction: 0 Dark Indicator=1

2. To confirm his initial order customer submits valid and correctly formatted new BUY DAY order message with same quantity and same price, with all mandatory and conditional MIFID II fields properly populated with:

ConditionalOrderFlag: Conditional Order =0
Dark Execution Instruction: 0 Dark Indicator=1

Success Criteria for FIX: The customer confirms the receipt and correct interpretation of an Execution Report (8) message for BUY order with:

ExecType (Tag 150) = 0 (New)
OrdStatus (Tag 39) = 0 (New) .
ConditionalOrderFlag: Conditional Order =0
Dark Execution Instruction: 0 Dark Indicator=1

Supported and Tested Successfully:

9.3 NEW FIRM ORDER BLK

TEST CASE ID	9.3
REQUIRED SBE MESSAGES	New Order (01); Ack (03)
REQUIRED FIX MESSAGES	NewOrderSingle (D); ExecutionReport (8)
MANDATORY	Yes
ASSISTED	No

Instructions for SBE: the customer submits valid and correctly formatted new BUY DAY order message, with all mandatory and conditional MIFID II fields properly populated with:

Execution Instruction: 6 Conditional Order =0
 Dark Execution Instruction: 0 Dark Indicator=1

Success Criteria for SBE: The customer confirms the receipt and correct interpretation of an Ack (03) message for BUY order with Ack Type= 0 (New Order Ack) and Ack Phase =8 (Random Uncrossing Phase Phase) without new MIFID II fields.

Instructions for FIX: The Customer submits valid and correctly formatted BUY DAY new order messages, with all mandatory and conditional MIFID II fields properly populated with:

ConditionalOrderFlag: Conditional Order =0
 Dark Execution Instruction: 0 Dark Indicator=1

Success Criteria for FIX: The customer confirms the receipt and correct interpretation of an Execution Report (8) message for BUY DAY order with:

ExecType (Tag 150) = 0 (New)
 OrdStatus (Tag 39) = 0 (New) .
 ConditionalOrderFlag: Conditional Order =0
 Dark Execution Instruction: 0 Dark Indicator=1

Supported and Tested Successfully:

9.4 NEW CONDITIONAL PRIMARY PEG ORDER BLK

TEST CASE ID	9.4
REQUIRED SBE MESSAGES	New Order (01); Ack (03)
REQUIRED FIX MESSAGES	NewOrderSingle (D); ExecutionReport (8)

3 Sweep Order Indicator =1 sweep order between Lit and hidden pool activated

2. OPTIQ analyst answers to the RFQ with a new order message(01) by setting the field RFQAnswerIndicator (tag 21037) to 1
3. The customer don't confirm this RFQ

Success Criteria for FIX:

1. The customer confirms the receipt and correct interpretation of an Execution report(8) message with Exec Type= RFQ Ack(j) .
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (36) for any side involved.
OPTIQ analyst confirms the RFQ Notification (35) message was routed to the respective Liquidity provider (s)
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (U36) for any side involved with potential matching quantity, price and the number of LP.
2. OPTIQ analyst confirms the RFQ LP Matching status message (U37) was routed to the respective Liquidity provider (s)
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (U36) for any side involved with potential matching quantity, price and the number of LP.
3. 180 seconds after the Quote Request (R) message has been submitted, The customer confirms the

receipt and correct interpretation of Execution report message (08) for any side involved with kill reason RFQ expired

4. OPTIQ analyst confirms the Execution report message (08) was routed to the respective Liquidity provider (s) with kill reason RFQ expired

11.4 RFQ FULLY MATCHED FUND

TEST CASE ID	11.4
REQUIRED SBE MESSAGES	Quote Request (10); RFQ Notification (35) ; RFQMatchingStatus (36); Ack(03); RFQ LP Matching status message (37); New Order(01)
REQUIRED FIX MESSAGES	Quote Request (R); RFQ Notification (U35) ; RFQMatchingStatus (U36) ;Execution report(08); RFQ LP Matching status message (U37); New Order(01)
MANDATORY	Yes
ASSISTED	No

Instruction for SBE:

1. The customer submits valid and correctly formatted Quote request (10) message making sure he remains connected to the OEG session with:

EMM= 1

0 Dark Indicator=0

3 Sweep Order Indicator =1 sweep order between Lit and hidden pool activated

2. OPTIQ analyst answers to the RFQ with a new order message(01) by setting the Execution Instruction to 'RFQ Answer'
3. The customer submits valid and correctly formatted New order (01) message to confirm the RFQ making sure he remains connected to the OEG session with:
Exec Instruction: RFQ Confirmation
Order Type: average price

Success Criteria for SBE:

1. The customer confirms the receipt and correct interpretation of an Ack (03) message with Ack Type= 11 (RFQ Ack) .
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (36) for any side involved.
OPTIQ analyst confirms the RFQ Notification (35) message was routed to the respective Liquidity provider (s)
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (36) for any side involved with potential matching quantity, price and the number of LP.
2. OPTIQ analyst confirms the RFQ LP Matching status message (37) was routed to the respective Liquidity provider (s)
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (36) for any side involved with potential matching quantity, price and the number of LP.
3. The customer confirms the receipt and correct interpretation of an Ack (03) message with Ack Type= 0.
The customer confirms the receipt and correct interpretation of an Fill (04) message
OPTIQ analyst confirms the Fill (04) message was routed to the respective Liquidity provider (s)

Instruction for FIX:

1. The customer submits valid and correctly formatted Quote request (R) message making sure he

remains connected to the OEG session with:

EMM= 1

0 Dark Indicator=0

3 Sweep Order Indicator =1 sweep order between Lit and hidden pool activated

2. OPTIQ analyst answers to the RFQ with a new order message(01) by setting the field RFQAnswerIndicator (tag 21037) to 1
3. The customer submits valid and correctly formatted New order (01) message to confirm the RFQ making sure he remains connected to the OEG session with:
RFQConfirmationIndicator (tag 21038) : 1
Order Type: T = average price

Success Criteria for FIX:

1. The customer confirms the receipt and correct interpretation of an Execution report(8) message with Exec Type= RFQ Ack(j) .
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (36) for any side involved.
OPTIQ analyst confirms the RFQ Notification (35) message was routed to the respective Liquidity provider (s)
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (U36) for any side involved with potential matching quantity, price and the number of LP.
2. OPTIQ analyst confirms the RFQ LP Matching status message (U37) was routed to the respective Liquidity provider (s)
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (U36) for any side involved with potential matching quantity, price and the number of LP.
3. The order should match. Client confirms receipt of two ExecutionReport (8) message, one as the Acknowledgement, and second for the match.
OPTIQ analyst confirms the ExecutionReport (8) message for the match was routed to the respective Liquidity provider (s)

11.5 RFQ PARTIALLY MATCHED

FUND

TEST CASE ID	11.5
REQUIRED SBE MESSAGES	Quote Request (10); RFQ Notification (35) ; RFQMatchingStatus (36); Ack(03); RFQ LP Matching status message (37); New Order(01)
REQUIRED FIX MESSAGES	Quote Request (R); RFQ Notification (U35) ; RFQMatchingStatus (U36) ;Execution report(08); RFQ LP Matching status message (U37); New Order(01)
MANDATORY	Yes
ASSISTED	No

Instruction for SBE:

- The customer submits valid and correctly formatted Quote request (10) message making sure he remains connected to the OEG session with:
 - EMM= 1
 - 0 Dark Indicator=0
 - 3 Sweep Order Indicator =1 sweep order between Lit and hidden pool activated
- OPTIQ analyst answers to the RFQ with 2 new order message(01) by setting the Execution Instruction to 'RFQ Answer' with 2 different price.
- The customer submits valid and correctly formatted New order (01) message to confirm the RFQ in order to match only 1 order, making sure he remains connected to the OEG session with:
 - Exec Instruction: RFQ Confirmation
 - Order Type: average price

Success Criteria for SBE:

- The customer confirms the receipt and correct interpretation of an Ack (03) message with Ack Type= 11 (RFQ Ack) .
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (36) for any side involved.
OPTIQ analyst confirms the RFQ Notification (35) message was routed to the respective Liquidity provider (s)
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (36) for any side involved with potential matching quantity, price and the number of LP.
- OPTIQ analyst confirms the RFQ LP Matching status message (37) was routed to the respective Liquidity provider (s)
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (36) for any side involved with potential matching quantity, price and the number of LP.
- The customer confirms the receipt and correct interpretation of an Ack (03) message with Ack Type= 0.
The customer confirms the receipt and correct interpretation of an Fill (04) message
The customer confirms the receipt and correct interpretation of an Kill (04) message with kill reason RFQ Remaining quantity killed
OPTIQ analyst confirms the Fill (04) message was routed to the respective Liquidity provider (s)
OPTIQ analyst confirms the Kill (04) message was routed to the respective Liquidity provider (s) with kill reason LP Order cancelled due to RFQ Confirmation

Instruction for FIX:

1. The customer submits valid and correctly formatted Quote request (R) message making sure he remains connected to the OEG session with:

EMM= 1

0 Dark Indicator=0

3 Sweep Order Indicator =1 sweep order between Lit and hidden pool activated

2. OPTIQ analyst answers to the RFQ with a new order message(01) by setting the field RFQAnswerIndicator (tag 21037) to 1
3. The customer submits valid and correctly formatted New order (01) message to confirm the RFQ in order to match only 1 order, making sure he remains connected to the OEG session with:
RFQConfirmationIndicator (tag 21038) : 1
Order Type: T = average price

Success Criteria for FIX:

1. The customer confirms the receipt and correct interpretation of an Execution report(8) message with Exec Type= RFQ Ack(j) .
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (36) for any side involved.
OPTIQ analyst confirms the RFQ Notification (35) message was routed to the respective Liquidity provider (s)
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (U36) for any side involved with potential matching quantity, price and the number of LP.
2. OPTIQ analyst confirms the RFQ LP Matching status message (U37) was routed to the respective Liquidity provider (s)
The customer confirms the receipt and correct interpretation of RFQMatchingStatus (U36) for any side involved with potential matching quantity, price and the number of LP.
3. The order should partially match. Client confirms receipt of three ExecutionReport (8) message, one as the Acknowledgement, second for the match and third for the kill with kill reason RFQ Remaining quantity killed
OPTIQ analyst confirms the ExecutionReport (8) message for the match was routed to the respective Liquidity provider (s)
OPTIQ analyst confirms the ExecutionReport (8) message for the kill was routed to the respective Liquidity provider (s) with kill reason LP Order cancelled due to RFQ Confirmation

RFQConfirmationIndicator (tag 21038) : 1
Order Type: T = average price

Success Criteria for FIX:

1. OPTIQ Analyst confirms the receipt and correct interpretation of an Execution report(8) message with Exec Type= RFQ Ack(j) .
OPTIQ Analyst confirms the receipt and correct interpretation of RFQMatchingStatus (36) for any side involved.
The customer confirms the RFQ Notification (35) message was routed to the respective Liquidity provider (s)
OPTIQ Analyst confirms the receipt and correct interpretation of RFQMatchingStatus (U36) for any side involved with potential matching quantity, price and the number of LP.
2. The customer confirms the RFQ LP Matching status message (U37) was routed to the respective Liquidity provider (s)
OPTIQ Analyst confirms the receipt and correct interpretation of RFQMatchingStatus (U36) for any side involved with potential matching quantity, price and the number of LP.
3. The order should match. OPTIQ Analyst confirms receipt of two ExecutionReport (8) message, one as the Acknowledgement, and second for the match.
The customer confirms the ExecutionReport (8) message for the match was routed to the respective Liquidity provider (s)

12. TRADING CHAIN FAILURES: EQ FUND FRM SP FUT OPT CMTD BLK

INTRODUCTION:

In the event of disruptive incident resulting in failure of a partition Optiq trading chain application will switch client system processing from being done on the Primary instance (or node) of this partition to its Mirror instance within the same environment. This is a case of a High Availability (HA) event / failover.

High availability testing is scheduled to take place with customers during the dress rehearsals. Euronext is offering customers the possibility to test High availability before these dates in the p-EUA environment. **Euronext strongly recommends the testing of High availability in advance** of the dress rehearsals and will offer conformance testing capabilities for this purpose.

Once tested customer can send the related webform available on the website:

In this section:

- inbound messages refer to messages sent by the client to the OEG
- outbound messages refer to messages received by the client from OEG

Testing Objectives:

The aim of these test is to guarantee no loss of service for clients in case of outage in the primary Trading Chain. More specifically

- Client detects failure and is able to resume the service.
- Client deals correctly with the “intentional increment sequence number”⁽¹⁾ for outbound messages after the reconnection.
- Client deals correctly with the reception of the Synchronization Time (51) / (FIX U51) message(s).
- Client detects any duplicate outbound message.
- Client detects any gap in sequence of inbound messages (based on the field “Last Client Message Sequence Number” (SBE) / NextExpectedMsgSeqNum (tag 789 in FIX protocol) in the Logon response message), and he is able to deal appropriately in accordance of his order entry retransmission policy.
- Client detects the scope of impacted instruments for which some previously received market events (trades/orders) are lost and therefore client must reconcile his order book with the central order book(with respect of those impacted instruments).

Testing preparation:

The partition on which the fail over will be triggered and schedule, will be provided in an Optiq notice.

The client chooses at his convenience trading groups as follows:

- scenarios 7.2,7.3 and 7.5 : trading group should be in call trading phase during failover test period
- scenario 7.4.: trading group should be in continuous trading phase during failover test period

The client chooses at its convenience symbols that belongs to the target trading groups as follows:

- symbol #A listed in the failing over partition.
 - symbol #B NOT listed in the failing over partition
- (conditional : relevant for multi-partitions segment HA testing)

For scenario 7.2,7.3 and 7.4 client enters only buy orders preferably at Market To Limit price

For scenario 7.5 , client is responsible for choosing symbols where matching is available.

12.2 CLIENT RECOVERY DOES NOT INVOLVE RETRANSMISSION OF OUTBOUND MESSAGES (HIGHLY RECOMMENDED)

Specific objective:

- Client successfully reconnects to the Mirror
 - Client deals correctly with the “intentional increment sequence number” for inbound messages after the reconnection.
 - Client deals correctly with the reception of the Synchronization Time (51) / (FIX U51) message(s).
 - Client detects the scope of impacted instruments for which some previously received market events (trades/orders) are lost and therefore client must reconcile his order book with the central order book(with respect of those impacted instruments).
-

Detailed course of events:

- Client use a connection that connects directly to the failing over partition.
- Client must have previously connected and received Instrument List (50) and recorded all segment instrument along with their related resynchronization ID
- Client enters the following order expected to remain in the book until the failover :
 - a non “Cancel On Disconnect” order #1 and a “Cancel On Disconnect” order #2 on symbol #A
 - a non “Cancel On Disconnect” order #1bis and an “Cancel On Disconnect” order #2bis on symbol #B (conditional: see above)
- Exchange experiences disruptive incident on the target partition
- **SUCCESS CRITERIA** : client order entry application is able to process successfully the whole recovery sequence as follows.

<p>1. Detecting Failover for Order Entry Gateways (OEG):</p> <ul style="list-style-type: none"> • One possible indication is unexpected drop of connection by the OEG (*) • Reception of the Synchronization Time (51) / (FIX U51) messages serves as confirmation of the switch to the Mirror instance. <p>(*)Please note – an unexpected drop in connection may be caused by different events</p>
<p>2. Reconnection and recovery</p> <p>On Euronext side, the automatic failover has the following impacts and the customer client connection should be able to process them :</p> <ul style="list-style-type: none"> • Client reconnects back to the exchange successfully • Client processes correctly the “intentional increment of sequence” as follows: <ul style="list-style-type: none"> ✓ For SBE The first outbound message received by the client feature an “Intentional increment of sequence number”⁽¹⁾. ✓ For FIX, a SequenceReset(4) is received to perform a gapfill of 1000. • Synchronization Time (51) / (FIX U51) messages is received on symbol #A but not for symbol #B, client checks potential stale outbound messages by discarding any previously received outbound message for which Book In Time / BookINTime (tag 21002) or Trade Time / TransactTime (tag 60) is higher than Last In Book time. There should be any for order #1 • Kill (05) / (FIX 8) messages for CoD orders for both #A and B# symbols generated by Cancel On Disconnect mechanism are received
<p>3. The real-time has resumed</p> <p>From now on, the customer should be able to enter new orders normally.</p>

12.3 CLIENT RECOVERY INVOLVES RETRANSMISSION OF OUTBOUND MESSAGES (HIGHLY RECOMMENDED)

Specific objective:

- Client successfully reconnects to the Mirror
- Client detects any gap in sequence of inbound messages (based on the field “Last Client Message Sequence Number” (SBE) / NextExpectedMsgSeqNum (tag 789 in FIX protocol) in the Logon response message), and he is able to deal appropriately in accordance of his order entry retransmission policy.
- Client deals correctly with the reception of the Synchronization Time (51) / (FIX U51) message(s).
- Client detects any duplicate outbound message.
- Client detects the scope of impacted instruments for which some previously received market events (trades/orders) are lost and therefore client must reconcile his order book with the central order book(with respect of those impacted instruments).

Detailed course of events:

- Client use a connection that connects directly to the failing over partition.
- Client must have previously connected and received Instrument List (50) and recorded all segment instrument along with their related resynchronization ID
- Client enters the following order expected to remain in the book until the failover :
 - a non “Cancel On Disconnect” order #1 and a “Cancel On Disconnect” order #2 on symbol #A
 - a non “Cancel On Disconnect” order #1bis and an “Cancel On Disconnect” order #2bis on symbol #B (conditional: see above)Client must disconnect before the fail over schedule time. (the aim here to force at least one outbound message generated by the exchange but not received by the client before the failure)
- Exchange experiences disruptive incident on the target partition
- **SUCCESS CRITERIA** : client order entry application is able to process successfully the whole recovery sequence as follows.

1. Detecting Failover for Order Entry Gateways (OEG):

- One possible indication is unexpected drop of connection by the OEG (*)
 - Reception of the Synchronization Time (51) / (FIX U51) messages serves as confirmation of the switch to the Mirror instance.
- (*)Please note – an unexpected drop in connection may be caused by different events

2. Reconnection and recovery

On Euronext side, the automatic failover has the following impacts and the customer client connection should be able to process them :

- Client reconnect back to the exchange successfully
- Client receives outbound messages associated to the market events that occurred before the incident without any jump in sequence
- Client receives afterward a first outbound message with a jump of sequence equal to the “intentional increment of sequence” . In the current scenario, client receives Synchronization Time (51) / (FIX U51) messages.
- At this stage, thanks to Synchronization Time (51) / (FIX U51) messages received , client must have identified symbol #A but not for symbol #B as part of the scope for which reconciliation with central book is required by discarding any previously received message for which Book In Time / BookINTime (tag 21002) or Trade Time / TransactTime (tag 60) is higher than Last In Book time. There should be any for order #1 Kill (05) / (FIX 8) messages for CoD orders for both #A and B# symbols generated by Cancel On Disconnect mechanism are received.

3. The real-time has resumed

From now on, the customer should be able to enter new orders normally.

12.4 CLIENT RECOVERY INVOLVES SOME SUPPOSEDLY MISSED INBOUND SEQUENCE NUMBERS (MANDATORY)

Specific objective:

- Client successfully reconnects to the Mirror
- Client detects possible gap in sequence of messages sent to the OEG (based on the field Last Client Message Sequence Number / NextExpectedMsgSeqNum (789) in the Logon response message), and he is able to deal appropriately in accordance of his order entry retransmission policy.
- Client detects the scope of impacted instruments for which some previously received market events (trades/orders) are lost and therefore client must reconcile his order book with the central order book(with respect of those impacted instruments).

Detailed course of events:

- Client use a connection that connects directly to the failing over partition.
- Client must have previously connected and received Instrument List (50) and recorded all segment instrument along with their related resynchronization ID
- First , client send a high quantity non Cancel On Disconnect order #1 at the buy side on symbol #A (and non CoD order #1bis symbol #B). Then client sends continuously a sustained rate of very small quantity (minimum lots) CoD orders at the sell side that match totally against order #1 on symbol #A (and against order #1bis on symbol #B) nearly before the fail over scheduled time with the aim to generate a huge number of small trades but also provoke supposedly inbound message loss.
- Exchange experiences disruptive incident on the target partition
- **SUCCESS CRITERIA** : client order entry application is able to process successfully the whole recovery sequence as follows.

1. Detecting Failover for Order Entry Gateways (OEG):

- One possible indication is unexpected drop of connection by the OEG (*)
- Reception of the Synchronization Time (51) / (FIX U51) messages serves as confirmation of the switch to the Mirror instance.

(*)Please note – an unexpected drop in connection may be caused by different events

2. Reconnection and recovery

On Euronext side, the automatic failover has the following impacts and the customer client connection should be able to process them :

- Client reconnect back to the exchange successfully
- Client detect that some inbound messages he has sent before the reconnection are supposedly missed by the exchange (based on the field Last Client Message Sequence Number/ NextExpectedMsgSeqNum (789) in the Logon response message. At this stage, client should identify the list of those sent messages for symbol #A and #B to prepare further actions depending on his risk management strategy :
- client might receive messages on symbol #A and #B associated to the market events occurred before the incident, including response related to messages supposedly missed by the exchange .
- Synchronization Time (51) / (FIX U51) messages are received. At this stage
- ✓ client must have identified symbol #A but not for symbol #B as part of the scope for which reconciliation with central book is required by discarding any previously received message for which Book In Time / BookINTime (tag 21002) or Trade Time / TransactTime (tag 60) is higher than

<p>Last In Book time.</p> <p>✓ no orders on symbol #A within the list of supposedly missed messages should remain in pending state: Either not acknowledged before Synchronization Time message (->lost) , or acknowledged before Synchronization Time message (-> discarded or valid based on BookInTime and Last In Book time comparison)</p> <p>Client deals with the list of inbound messages supposedly missed for symbol #B by the exchange by checking their status via OpenOrderRequest(15) / OrderMassStatusRequest (AF) or by pulling them from the market.</p> <p>Kill (05) / (FIX 8) messages for CoD orders for both #A and B# symbols generated by Cancel On Disconnect mechanism are received.</p>
<p>3. The real-time has resumed</p> <p>From now on, the customer should be able to enter new orders normally.</p>

12.5 CLIENT RECOVERY INVOLVES CROSS ACCESS PARTITION FAILURE (MANDATORY IN THE CASE OF MULTI-PARTITION SEGMENT)

Specific objective:

- In case the client connection is not involved in cross access trading , client ignore the Synchronization Time (51) / (FIX U51) message(s)
- In case the client connection is involved in cross access trading:
 - ✓ Client deals correctly with the reception of the Synchronization Time (51) / (FIX U51) message(s).
 - ✓ Client detects the scope of instruments for which some previously received market events (trades/orders) are lost and therefore client must reconcile his order book with the central order book in scope.

Detailed course of events:

- Client use a connection that DO NOT connect directly to the failing over partition.
- Client must have previously connected and received Instrument List (50) and recorded all segment instrument along with their related resynchronization ID
- If client connection is involved in cross access trading, client enters the following likely on symbol #A to remain in the book until the failover :
 - a non Cancel On Disconnect order #1 on symbol #A
 - a Cancel On Disconnect order #2 on symbol #A
- Client sends a non Cancel On Disconnect orders on the target symbol #B nearly before the fail over scheduled time.
- Exchange experiences disruptive incident on the target partition
- **SUCCESS CRITERIA** : client order entry application is able to process successfully the whole recovery sequence as follows.

- | |
|---|
| <p>1. Detecting Failover for Order Entry Gateways (OEG):</p> <ul style="list-style-type: none"> • One possible indication is reception of Reject (07) / (FIX 8) message from the OEG with status “System Unavailable” from the partition (*) • Reception of the Synchronization Time (51) / (FIX U51) messages serves as confirmation of the switch to the Mirror instance. <p>(*)Please note – reception of Reject / FIX 8 with Status “System Unavailable” may be caused by</p> |
|---|

different events
<p>2. Recovery</p> <p>On Euronext side, the automatic failover has the following impacts and the customer client connection should be able to process them :</p> <ul style="list-style-type: none"> • Client checks that orders sent on symbol #B are acknowledged normally and not impacted by the failover. • Client receives outbound messages on symbol #A associated to the market events that occurred before the incident. • Synchronization Time (51) / (FIX U51) messages are received. <p>At this stage:</p> <ul style="list-style-type: none"> ✓ In case the client connection is not involved in cross access trading ,client ignore the message ✓ In case the client connection is involved in cross access trading, client must have identified symbol #A as part of the scope for which reconciliation with central book is required by discarding any previously received message for which Book In Time / BookINTime (tag 21002) or Trade Time / TransactTime (tag 60) is higher than Last In Book time There should be any for order #1 • Kill (05) / (FIX 8) messages for CoD orders generated by CoD mechanism are received
<p>3. The real-time has resumed</p> <p>From now on, the customer should be able to enter new orders normally.</p>

(¹): Intentional Increment of Sequence Number:

- In some cases when partition Primary instance fails over to the Mirror the message sequence number may be intentionally increments by a pre-defined number. This is being done specifically for cases of disruptive incidents (either HA or Business continuity) to guarantee delivery of full scope of messages for resynchronization and to reduce number of unexpected rejections of client Logon attempts.
- The latest values of this increment are provided in the section “Segment-Wide Configuration Settings” in the *Euronext Cash Markets – Optiq OEG Connectivity Configuration Specifications* document. For Day 1 of Optiq this value is set to 1000 for all trading segments.
