# 1. EURONEXT OPTIQ MARKET DATA GATEWAY SOLUTION

## 1.1 INTRODUCTION

This document details the Referential Data Service for Euronext, to be used in conjunction with the Optiq MDG and OEG messages specifications.

The service provides full referential data for the Euronext markets, as well as feed configurations, key trading information and MDG and OEG SBE templates. Users of the Euronext market data feed should use the service to:

- ◆ Configure feed connections,
- ◆ Obtain the referential data, configuration and setup parameters, that are published on a daily basis.

The APA/ARM sections of this document comply with the UK DRSP regulatory framework governance.

## 1.2 ACCESS TO SERVICES

Access to Euronext File Services (EFS) in EUA and Production is only available through the Internet using the HTTPS protocol.

Common File Transfer System (CFTS) access for EUA is available through the Euronext Colocation/CMC private network and through the internet using the SFTP protocol with SSH key pair authentication.

Access to CFTS for EUA and Production environments will only be granted to customers that have at least one of the agreements in place with Euronext as defined in Optiq Euronext File Services User Guide and Euronext Common File Transfer User Guide.

Clients have read only access that allows them to download files, but not to upload or modify them.

The details of the HTTPS connectivity can be found in Euronext File Service User Guide. The Common File Transfer System User Guide provides the details of SFTP connectivity.

Below is the description of the folder structure that contains files provided on EFS for 5 rolling trading days. The Common File Transfer System User Guide provides the description of the CFTS folder structure and files contained within each folder.

Folder	Description
OptiqMDG	Root folder, which identifies that all the following folders and files are used for Optiq
└ Environment	Defines if this is in "Production", "v-EUA" or "p-EUA"
└└ Current	For the current day file.
└ OptiqSegment	Defines the segment on Optiq
└└ Current	For the current day file.

Latest files are stored in the folder "Current" located either within the Environment or individual OptiqSegment folders.

Files available under the Environment folder are:

- ◆ CashTickSizeReferentialFile<sup>1</sup>
- ◆ Euronext RLP Universe<sup>2</sup>
- ◆ MBR\_FAMINSTR<sup>2,2</sup>
- ◆ LP\_OBLIGATIONS<sup>2,2</sup>

Files available in the individual OptiqSegment folder, as needed, are:

- ◆ SBE Templates (for OEG and MDG)
- ◆ CashStandingDataFile
- ◆ CashTickSizeReferentialFile
- ◆ AuthorizedPriceFluctuationFile
- ◆ DerivativesStandingDataFile
- ◆ DerivativesTickSizeFile
- ◆ OpenInterestFile
- ◆ ReferenceSpreadsFile
- ◆ PrevDayCapAndVolTradeFile
- ◆ TimetableFile
- ◆ RepoSettlementPriceFile
- ◆ TRF Conversion Parameters File

The files are needed / made available for individual segments as follows:

Files	Optiq Segment											
	EQ	FND	FXI	SP	EOD	IDD	CMO	BLK	Indices	IBF	Forex	TRP

<sup>1</sup> The CashTickSizeReferentialFile is currently provided under (1) Environment and (2) individual OptiqSegment folders for Derivatives

<sup>2</sup> Euronext RLP Universe, MBR\_FAMINSTR and LP\_Obligations files will be available through CFTS Referential Data Service only and are sourced from Euronext IDSCash database

### 1.3 FILE NAMING CONVENTION

The Optiq referential files available on CFTS are populated from the same data sources. Files are provided in different Optiq segment types:

- Cross Optiq Segment Files, i.e. a single file generated for multiple Optiq Segments.
- Individual Optiq Segment specific files generated / provided for each individual Optiq Segment on a daily basis

As a result, the file naming convention varies according to the type of file.

#### ■ Cross Optiq Segment Files

These files are unique referential files, valid for all Optiq Segments. It is therefore not required to generate the same file for each Optiq Segment.

Cross Optiq Segment files have the following naming convention:

<OptiqGateway>\_<Environment>\_<FileName>\_<ALL>\_<Date>.xml

Where:

- OptiqGateway is 'OptiqMDG', for MDG files or 'OptiqOEG', for OEG files
- Environment and FileName are the same as defined in folder structure
- OptiqSegment is always 'ALL'
- Date is the trading date for which the file is provided - with format 'YYYYMMDD'

The files provided in this manner are:

- CashTickSizeReferentialFile
- Euronext RLP Universe<sup>22</sup>
- MBR\_FAMINSTR<sup>22</sup>
- LP\_OBLIGATIONS<sup>22</sup>

Example of the Cash Tick Size Referential File generated in Production on the 1st of June 2022:

OptiqMDG\_Production\_CashTickSizeReferentialFile\_ALL\_20220601.xml.

And it will be located in:

OptiqMDG

└ Production

└ Current

└ CashTickSizeReferentialFile

■ Files generated / provided for individual Optiq Segment

Files generated / provided for individual Optiq Segment on a daily basis have the following naming convention:

<OptiqGateway>\_<Environment>\_<FileName>\_<OptiqSegment>\_<Date>.xml

Where:

- OptiqGateway is 'OptiqMDG', for MDG files or 'OptiqOEG', for OEG files
- Environment and FileName are the same as defined in folder structure
- OptiqSegment is one of the values of the available segments available on EFS
- Date is the current trading date with format 'YYYYMMDD'

The files provided in this manner are:

- SBETemplates (for MDG and OEG)
- CashStandingDataFile
- CashTickSizeReferentialFile
- AuthorizedPriceFluctuationFile
- DerivativesStandingDataFile
- DerivativesTickSizeFile
- OpenInterestFile
- ReferenceSpreadsFile
- PrevDayCapAndVolTradeFile
- TimetableFile
- RepoSettlementPriceFile
- TRF Conversion Parameters File
- ExchangeRatesFile

Example of the Open Interest File generated in Production on 1<sup>st</sup> of June 2022, on the 'Commodities' Optiq Segment:

OptiqMDG\_Production\_OpenInterest\_Commodities\_20220601.xml

## 1.4 SERVER AVAILABILITY

The server is available 24 hours a day, seven days a week.

## 1.5 FILE VERSION AVAILABILITY

The OEG and MDG SBE Template files are Backward and Forward compatible. The latest supported versions for each Optiq segment are available on the server. For more information on Backward and Forward compatibility of SBE, please refer to the OEG and MDG specifications documents, as well as the technical notes on SBE compatibility and the chosen approach for individual migration / projects.

For all other file types, in case of a new version of the file, customers will have to migrate to the new version of the file on the go-live date. Only the latest version of the file, applicable for the environment, is provided for the current trading day.

---

## 1.6 FUTURE USE

In preparation for various functionalities expected to be implemented in the future on Optiq a number of fields were added and flagged "For Future Use".

Details of functionalities flagged in the specifications as for 'Future Use' are provided for information purposes only, and may change significantly until such time as the finalised specifications for the relevant service are communicated to clients.

The effective use of fields will not be technically supported until the announced date for implementation of these functionalities.

**Note:** Fields and Values for future in the files structures are represented in *italic and in grey*.

## 2. FILE OVERVIEW

The aim of this section is to describe the fields types used in the reference data files. For full details of file format, values and use, please review to the OEG and MDG specifications documents.

### 2.1 FUNCTIONAL FORMAT FIELDS

Functional Format	Description
Alphanumerical ID	String type identifying an element.
Amount	Signed numerical field representing an amount.
Bitmap	Array of bits, each bit specifying whether an optional value is present (set to "1") or not (set to "0") (in Little-Endian).
Boolean	Indicator having two possible values, either 'true - 1' or 'false - 0'. This value is set on the first bit of the byte (in Little-Endian).
Date	Date of an event.
Decimal Places	Number of decimals associated to a numerical field.
Enumerated	Information having a delimited set of possible values.
Epoch Time in Nanoseconds	UTC time in nanoseconds since 1970 January the 1st.
Integer Time in hhmss	Time in an integer on 2 bytes expressed as hhmss
Intraday Time in Seconds	UTC time in seconds since the beginning of the day.
Numerical	Generic numerical field.
Numerical ID	Numerical field identifying an element.
Price	Numerical field representing a price (either signed or not signed).
Quantity	Unsigned numerical field representing a quantity of elements (for example a number of shares).
Text	Text in UTF-8.
Timestamp	Time of an event.

## 2.2 TECHNICAL FORMAT FIELDS

The following technical types are used:

- All integers are numeric (signed/ unsigned specified in each field format description) using two’s complement method.
- Binary data are in Intel byte order (Little-Endian).
- All “Alphanumerical ID” and “Text” fields are alphanumeric based on UTF-8.

Technical Format	Description
character	Alphanumerical field containing only 1 character
signed integer 64	8 bytes signed numerical field
unsigned integer 8	1 byte unsigned numerical field
unsigned integer 16	2 bytes unsigned numerical field
unsigned integer 32	4 bytes unsigned numerical field
unsigned integer 64	8 bytes unsigned numerical field
XML date	Date displayed in YYYYMMDD format
XML timeSec	Text formatted according to ISO 8601: hh:mm:ssZ where Z = UTC
XML timeNano	Text formatted according to ISO 8601: hh:mm:ss:mmmμμμnnnZ where “mmm” indicate the milliseconds “μμμ” indicate the microseconds “nnn” indicate the nanoseconds Z = UTC
XML text50	Alphanumerical field which length is 50 characters
Decimals	Numerical field with “.” as a separator

## 2.3 DATE CONVENTION

Dates are defined in number of days since 1970 January the 1<sup>st</sup> (01/01/1970 is the day “0”). The file structure provides them in human readable format YYYYMMDD where

- “YYYY” is the year
- “MM” is the month
- “DD” is the day

## 2.4 TIME CONVENTION

In XML files, timestamps are provided in two (2) formats, based on ISO 8601: Time in seconds and time in nanoseconds.

- Times in seconds: hh:mm:ssZ

Where:

- hh is the hours
- mm the minutes
- ss the seconds
- Z stands for UTC time

- Times in nanoseconds: hh:mm:ss:mmmµµnnnZ

Where:

- hh is the hours
- mm the minutes
- ss the seconds
- mmm the milliseconds
- µµµ the microseconds
- nnn the nanoseconds
- Z stands for UTC time

## 2.5 FEED CONFIGURATION

The **CashStandingDataFile** (9007) and **DerivativesStandingDataFile** (9013) are provided on a daily basis per Optiq Segment. Every Instrument in the file has a repeating section called MDGSetOfChannels and this repeating section provides the *MDGSetOfChannelsID* and the *MDGSetOfChannelsName*. The ID is a unique number for the combination of Asset Class and Country Split.

MDGSetOfChannels					
	<a href="#">MDGSetOfChannelsID</a>	Identifier of an MDG Set Of Channels.	unsigned integer 16	2	From 0 to 65534
	<a href="#">MDGSetOfChannelsName</a>	Name of the MDG Set Of Channels.	string	100	(See field description)
/MDGSetOfChannels					

Most instruments have only one repeating section, but instruments belonging to the Equities Optiq Segment for instance can have more than one repeating section :

1. ID=5 – Equities France
2. ID=11 – Best of Book (Retail Matching Facility)

At the end of the Standing Data file, two connectivity configuration sections are provided: SetOfChannels and LogicalAccessConnectivity.

For more information on the section LogicalAccessConnectivity please refer to the *Euronext Cash and Derivatives Markets – Optiq OEG Connectivity Aruba Datacentre – Technical Specification* document.

SetOfChannels provides the full feed configuration details for the Optiq Segment are made available. For each SetOfChannels, the ChannelType is provided for Real-Time and Snapshot channels, together with the available ChannelID's and ChannelSpeed.

SetOfChannels					
	<a href="#">MDGSetOfChannelsID</a>	Identifier of an MDG Set Of Channels.	unsigned integer 16	2	From 0 to 65534
	<a href="#">MDGSetOfChannelsName</a>	Name of the MDG Set Of Channels.	string	100	(See field description)

## 2.6 DERIVATIVES PARAMETERS

**DerivativesStandingDataFile** (9013) are provided on a daily basis per Optiq Segment. Every contract in the file comes with a set of trading parameters that are provided in a dedicated substructure.

The trading parameters are provided to clients as non-mandatory referential data than can be used to build finer trading algorithms across Exchange Market Mechanisms. The Derivatives parameters, for each contract, are provided as follows:

DerivativesParameters				0..254	Optional
<a href="#">EMM</a>	Defines the Exchange Market Mechanism applied on each platform.	Enumerated	1	(See field description)	Optional
<a href="#">Param Name</a>	Name of a Contract parameter.	Enumerated	1	(See field description)	Optional
<a href="#">Param Value</a>	Value of a Contract Parameter.	Text	255		Optional

<a href="#">Param Type Of Expression</a>	Parameter Type Of Expression of Contract Parameter Name.	Enumerated	1	(See field description)	Optional
/DerivativesParameters					Optional

- The Param Name field is an enumerated field. Repeated for each parameter for each EMM. It identifies for each record the parameter provided. Details of the parameter (description, use, unit) are provided in the field description.
  - Example (for EMM RFC): 4 - RFCMinimumQuantityForReactor: Quantity (Minimum quantity to submit for RFC as a reactor)
- The Param Type of expression is an enumerated field that provides the technical format of the parameter being given its unit provided in the description
  - Example (for EMM RFC, and Param Name 4 above): 3 – Absolute Value  
Absolute Value indicates that the value is provided – based on its unit – according to Optiq standards. For this parameter, it is a Quantity, it will be thus expressed as a non-decimalized integer.
- The Param Type field is a string allowing to provide the value as indicated by the combination of the parameter unit provided in the parameter description and the Param type of expression. Providing the field in a string allows client to format it on their side according to their needs.

This method allows Euronext to provide all parameters, whether they are prices, quantities, bitmaps, Booleans, or time in a single framework, to be systematically interpreted by clients willing to use them in order to build flexible trading algorithms able to adapt to each contract through calibration via the Derivatives parameters.

## 2.7 PRICE, QUANTITY, RATIO AND AMOUNT DECIMALS

Some numerical fields are processed using another field for decimalization. Client have to link each field to the associated decimal field.

Name of the associated decimal field is always defined in the field description.

The decimalized value must be calculated according to the following formula:

$$\text{Decimalized Value} = \frac{\text{Integer}}{10^{\text{Value in decimal field}}}$$

For example, a Tick Factor Max Period as defined in the field description is to be calculated with Ratio / Multiplier Decimals. Value provided in the **DerivativesTickSizeFile** (9021) file is integer of 300, and the field *Ratio Decimals* is equal to 2.

$$\text{Using these values the calculation is} = \frac{300 (\text{Tick Factor Max Period field in the file})}{10^2 (\text{Value in the Ratio Decimals field})}$$

As a result, the value of Tick Factor Max Period has the value of **3** (meaning 3 months).

The same mechanism is used for:

- All quantities with "[Quantity Decimals](#)"
- All prices with "[Price Decimals](#)" (Where the field name is Price / Index Level Decimals)
- All amounts with "[Amount Decimals](#)"

## 3. FILE DESCRIPTION

---

### 3.1 SBE TEMPLATE FILES

SBE Template files aim to help decode SBE messages using an SBE decoder.

- Two (2) SBE Template files are available: one for OEG and one for MDG. These files are stored in each individual <OptiqSegment> folder.

SBE tools and documentation that can be used to generate (encode and decode) SBE messages are available on:

<https://github.com/real-logic/simple-binary-encoding> (refer to [SBE Disclaimer in appendix](#))

This file structure is defined by SBE protocol and contains:

- The list of all technical fields
- SBE Headers structure
- The list of all possible values for each Enumerated field
- The list of all possible values for each Bitmap field
- The structure of each message with the expected order of each fields

Clients must check the file every day to determine whether a new Schema Version is available.

Full and detailed message structures are specified in the **Euronext Cash and Derivatives Markets – Optiq MDG Message – Interface Specification**.

- File Availability: Available 24/7.
- Scope of contents: All Euronext segments and all SBE messages for Market Data and Order Entry. One file per Optiq Segment.

---

### 3.2 CASHSTANDINGDATAFILE (9007)

The **CashStandingDataFile** (9007) provides referential data for cash markets.

The file provides three structures per instrument breakdown, as per the following tree:

- CashStandingDataFile
  - StandingDataUnitary
    - Common Standing Data
    - MDGSetOfChannels
    - *ETFDDataFromMarketOfReference (not used)*
  - FeedConfigurationFile
    - SetOfChannels
      - Channels
        - MulticastDataRealTime
          - MulticastA

- Repeated sections in the tree structure are displayed with a green border below, including their header.
- XML Headers and Footers are displayed in a different colour than fields

- The first structure provides the standing data functionally needed for trading purpose.
  - All operational referential data broadcasted on the feed at start of day via Optiq MDG Standing Data 1007 message is also available in this section.
  - As an example, Timestamps on the feed are provided in number of ns since 1970 January the 1st. The file structure provides them in human readable format (YYYYMMDD).
- The second structure is dedicated to MD connectivity. It provides the physical addresses of channels on which data is disseminated for the given instrument, access to which depends on client authorization.
- The third structure provides connectivity information for all Cash Order Entry Gateways (OEG) of the concerned Optiq Segment and the associated Drop Copy (DC) gateways.
- File Availability: Available 24/7.
- Scope of contents: Cash instruments.  
Note: For Forex segment, fields are by default filled-in (as they are mandatory) but no snapshot is provided through MDG. Standing Data is only available via EFS.
- Intraday updates: This file will be updated overnight.

### 3.3 CASHTICKSIZEREFERENTIALFILE (9020)

- The Ticksize file contains different tables defining the variable tick sizes used for trading activity. A tick size table is composed of an index (identifying a table instance) with a list of price ranges that have corresponding tick sizes.
- Fixed tick sizes are also included in the tick size file, they correspond to indexes for which only one entry range [0,MaxValue] is defined.
- Point of attention: certain TCS products do not have tick sizes (and this is the expected behaviour). Tick sizes depend of the EMM and certain EMMs do not support tick sizes.
- File availability: This file is available at the start of day and is needed by the Customers for the trading day. Customers must be able to download and process this file on a daily basis.
- Scope of contents: The file scope includes a tick size table for Cash markets, and the variable (price range-dependent) ticks and fixed price ticks.
- Intraday updates: No intraday update will be performed on the Tick Size table. Should the need arise, updates will be done in the referential tool and will be applied on the following business day (i.e. D+1). Meaning, the file will only be updated on a daily basis.

The file provides three structures per instrument breakdown, as per the following:

- CashTickSizes
  - Tick Size Index ID
  - Cash Tick Size

### 3.4 DERIVATIVESSTANDINGDATAFILE (9013)

The **DerivativesStandingDataFile** (9013) provides all referential data for derivatives markets.

On the derivatives market, three (3) different messages will broadcast standing data on the feed: Contract Standing Data, Outright Standing Data and Strategies Standing Data.

This file provides the following structure breakdown:

- DerivativesStandingDataFile
  - ContractStandingDataUnitary
    - ContractEMMProperties
    - Derivatives Parameters Rep
    - OutrightStandingDataUnitary
      - Common Outright Standing Data
      - OutrightStandingDataRep
      - OutrightStandingDataCompositionRep
    - StrategyStandingDataUnitary
      - ~~Common Strategy Standing Data~~
      - ~~ExternalInstrumentID~~
        - StrategyStandingDataRep
    - MDGSetOfChannels
    - InterContractStrategyAuthRep
  - FeedConfigurationFile
    - SetOfChannels
      - Channels
        - MulticastDataRealTime
          - MulticastA
          - MulticastB
        - MulticastDataSnapshot
          - MulticastA
          - MulticastB
  - LogicalAccessConnectivity
    - Partition

- On a contract-based breakdown, data is provided with a file with one nested structure. Following that, at a contract level, two sections are added to deal respectively with MD connectivity and in the OE connectivity.
- File Availability: Available 24/7.
- Scope of contents: Derivative instruments.
- Intraday updates: This file will be updated overnight.

Note on values in the field Dynamic Collar Logic for Derivatives markets. Values have the following meaning:

- Dynamic Collar Logic "0" (Not Active): Trade Price Validation is not activated.
- Dynamic Collar Logic "3" (Reservation with Acceptation): Indicates that Trade Price Validation is activated.
  - The fields Collar Max Unhalt Nb and Collar Unhalt Delay provide the parameters for management of Trade Price Validation when it is activated.
- Value "2" (No Halt with Reject) - is not currently in use.

Note on **External Instrument ID** value:

- Determination in case of Power instruments (External letter is already part of Product Code.. in the [XXX] we'll add the corresponding number with the following result : I Instrument ID in OutrightStandingDataUnitary section).

The ID is identified by:

**[ProductCode] + [XXX] + '-' + [YY]**

Where:

- [ProductCode] represents the Product Code of the Contract the instrument belongs to
  - [ProductCode] itself identifies the expiration cycle of the Contract as [Name] + [Y/Q/M/W/D]
- [XXX] identifies the expiry and it is linked to the ExpiryCycleType
  - if it is set to **yearly** - nothing is attached to the string
  - if it is set to **quarterly** - the quarter number (from 1 to 4) is attached
  - if it is set to **monthly** - the three-letter month abbreviation are attached
    - can be : JAN / FEB / MAR / APR / MAY / JUN / JUL / AUG / SEP / OCT / NOV / DEC
  - if it is set to **weekly** - the number (from 01 to 53) of the week is attached
  - if it is set to **daily** - the day and month (in [DDMM] format) of Delivery Period End Date is attached
- [YY] represents the last two digits of the Delivery year

No padding is done in case of different lengths.

- For the determination in case of other instruments, the ID is identified by:

**[ProductCode] + [X] + [Y]**

- Where:[ProductCode] represents the Product Code of the Contract the instrument belongs to(the value is padded with ` ` up to 5 chars)
- [X] identifies the expiry month as per the following mapping rule:
  - 1=F / 2=G / 3=H / 4=J / 5=K / 6=M / 7=N / 8=Q / 9=U / 10=V / 11=X / 12=Z
- [Y] identifies the last char of the year of the Expiry Date (from 0 to 9)

Note on values in the field Param Value when ParamName is set to CVF (21) for Derivatives markets. The formula used to determine the CVF value is the following one:

$(LOT\_SIZE * TICK\_VALUE) * (TICK\_SIZE\_DENOMINATOR / EDSP\_TICK\_SIZE\_NUMERATOR) * 10^7$

Where:

- *LOT\_SIZE* = Lot multiplier \* Lot size
- *TICK\_VALUE* configured at Contract level
- *TICK\_SIZE\_DENOMINATOR* is an internal field for internal usage (is the number to divide the tick value to obtain the tick size)
- *EDSP\_TICK\_SIZE\_NUMERATOR* is an internal field for internal usage

### 3.5 DERIVATIVESTICKSIZEFILE (9021)

- The Ticksize file contains different tables defining the variable ticksizes used for trading activity. A table is composed of an index (identifying a table instance) with a list of price ranges that have corresponding ticksizes. A contract is associated to a table for each EMM it is tradable through.
- Derivatives TickSizetable also include two parameters to be used together with the sizes:
  - Tick Factor

– Tick Factor Max Period

■ Use of Tick Factor and Tick Factor Period :

Tick tables are defined on a per contract basis and are applicable to all outright and strategies within the contract, for both option contract and future contract.

The **Tick Factor** allows to define a reduction of the tick size for a maturity group identified through the **Tick Factor Max Period**.

**Tick Factor Max Period** is a time to expiry (TTE) expressed in months. For all instruments within the contract having a TTE smaller than the **Tick Factor Max Period**, the **Tick Factor** is applied on top of the tick size determined by the tick table and the price range - i.e. Tick size must be divided by **Tick Factor**.

Note: TTE is calculated the following way: (Last Trading Date – Today). To convert it to months and compare to various thresholds :  $TTE(\text{months}) = TTE(\text{Days}) * (12/360)$ .

TTE in days (Last Trading Day – Today) is provided explicitly for each outright in a dedicated field 'Days to Expiry' of **DerivativesStandingDataFile** (9013).

By definition, a strategy expires when one of its leg expires. So TTE of a strategy is the TTE of its nearest leg.

■ Tick Sizes for Strategies :

Strategies always use the smallest possible tick. Independently from TTE and Tick Factor, strategies will always use the smallest tick of the tick table of the contract.

If on top of it, the Strategy has a TTE < Tick Factor Max period, then the Tick Factor also applies.

■ File availability

This file is available at the start of day and is needed by the Customers for the trading day. Customers must be able to download and process this file on a daily basis.

■ Scope of contents

The file scope is the following: a tick size table for Derivatives markets, contains variable (price range-dependent) ticks and fixed price ticks.

■ Intraday updates

No intraday update will be performed on the Tick Size table. Should the need arise, updates will be done in the referential tool and will be applied on the following business day (i.e. D+1). Meaning, the file will only be updated on a daily basis.

The file provides structure is as per the following tree:

- DerivativesTickSizes
  - Tick Size Index ID
  - Tick Table Name
  - Tick Factor Max Period
  - Tick Factor
    - Derivatives Tick Size

### 3.6 OPENINTERESTFILE (9014)

Open Interest file provides open interest information calculated by the Clearing system as per the end of the trading day session for Index, Equity and Commodity Derivatives contracts. The following files are generated:

- OptiqMDG\_[Env]\_OpenInterestFile\_EquityDerivatives\_YYYYMMDD
- OptiqMDG\_[Env]\_OpenInterestFile\_IndexDerivatives\_YYYYMMDD
- OptiqMDG\_[Env]\_OpenInterestFile\_CommodityDerivatives\_Power\_YYYYMMDD
- OptiqMDG\_[Env]\_OpenInterestFile\_Commodities\_YYYYMMDD
- OptiqMDG\_[Env]\_OpenInterestFile\_Commodity\_Other\_YYYYMMDD

For Commodity contracts instead, the Open Interest file is made available at the end of the trading day session for Power Derivatives and Other Derivatives, while a separate version containing all agricultural commodities is provided around 10:30 of the next day before market opens and contains information calculated by the Clearing system considering also nightly netting activities.

- File Availability: Available 24/7.
- Scope of contents: Derivative instruments.
- Intraday updates: XML file will be created as soon as the open interest file is received from ENX Clearing.

### 3.7 REFERENCESPREADSFILE (9045)

Reference Spreads File provides the following referential data used for:

- Reference Spread for contracts on which Market Making Agreements are defined. The spread is expressed as on a per maturity group basis and as a relative to the bid value. Reference Spread is not updatable intraday.
- The Actual Quality Spread (AQS) multiplier, allowing to determine the effective Reference Spread applicable at start of day. AQS can be updated intraday (via MDG) and is the effective spread used to measure Market Makers performance. AQS is defined through this multiplier relatively to the Reference Spread and is as such defined relatively to the bid value.
- The Collars multiplier, allowing to determine the collars spread size, defined as a multiplier of the reference spread. The Reference Spread provides values relative to a price level. As such it is applied as compared with the Dynamic Collar Reference Price (instead of the Best Bid Price used for Market Making).

For more details about the use of reference spreads and associated variables please refer to the How the Market Works.

- File Availability: Available 24/7.
- Scope of contents: Derivatives instruments.
- Intraday updates: No intraday updates.

The file provides structure is as per the following tree:

### 3.11 AUTHORIZEDPRICEFLUCTUATION FILE (9008)

The Authorized Price Fluctuation file details the Authorized Price Fluctuation (APF) tables, on a given day.

The APF tables are used in the context of Static, Dynamic and Order Price Control Collars. Using the instrument price as a key, the APF table allows to deduce the corresponding Allowed Price Fluctuation.

The file is provided on a per Segment basis.

- File Availability: Available 24/7.
- Scope of contents: All the Exchange segments for Market Data.
- Intraday updates: This file will be updated overnight.

Field	Short Description	Format	Len	Values	Presence
<a href="#">APF Index ID</a>	Identifier of the APF table	Numerical ID	2	0..2 <sup>16</sup> -2	Mandatory

<a href="#">Authorized Price Fluctuation Type</a>	Indicates whether the APF is expressed in Percentage or Absolute Value	Enumerated	1	1 Percentage 2 Absolute Value	Mandatory
/APFTableSection					

Below an example of an APF table:

APF Index ID	Minimum Price	Authorized Price Fluctuation	Authorized Price Fluctuation Type
12	0	5	Percentage
12	75	10	Percentage
12	150	15	Percentage

The above APF table example is to be read as follows:

- If  $0 < \text{Instrument Price} < 75$ , then allowed Price Fluctuation is 5%
- If  $75 \leq \text{Instrument Price} < 150$ , then allowed Price Fluctuation is 10%
- If  $150 \leq \text{Instrument Price}$ , then allowed Price Fluctuation is 15%

An APF table will always contain at least one line, with 0 minimum Price.

### 3.12 EURONEXTRLPUNIVERSE FILE

The Euronext RLP (Retail Liquidity Providers) File, is flat csv file, delimited by a semi-colon. It provides a list of instruments codes with their associated index. The file will be available through CFTS Referential Data Service using SFTP with SSH key authentication.

The first line of the files contains the filename, internal application reference, date and time the file was created.

The second line of the file contains the field names delimited by a semi-colon.

- File Availability: Available 24/7.
- Scope of contents: All the Exchange segments for Market Data.
- Intraday updates: This file will be updated overnight.

File name will follow this template:

### 3.13 MEMBERSFAMILYINSTRUMENTS

The Members Family Instruments (MBR\_FAMINSTR) file is a flat text file, delimited by field length. It provides a list of instruments codes with their associated internal instrument categories. The file will be available through CFTS Referential Data Service using SFTP with SSH key authentication.

The first line of the file contains the field names delimited by a forward slash.

- File Availability: Available 24/7.
- Scope of contents: All the Exchange segments for Market Data.
- Intraday updates: This file will be updated overnight.

File name will follow this template:

### 3.14 TOTAL RETURN FUTURES CONVERSION PARAMETERS FILES

The TRF Conversion Parameters files provide the following data on a daily basis:

- Contract characteristics: Maturity name, Number of days to expiry, Daily Settlement Price...
- Indices values of the previous day and current day: CAC 40 Funding index, CAC 40 Synthetic index and the CAC 40 Cumulative Dividend index

Two TRF Conversion Parameters files are produced each day. A Start Of Day (SOD) file is available before opening with limited data around 09:20 CET. And the End Of Day (EOD) file is available after closing with extended data before 20:00 CET. These files are available via the Euronext File Server (EFS), Common File Transfer System (CFTS) using SFTP with SSH key pair authentication, and on the Euronext website.

The TRF Conversion parameter files will be available under the 'IndexDerivatives' segment.

The layout of the file is the same between the Start Of Day (SOD) and the End Of Day (EOD) file.

### 3.16 CLOSING\_PRICE\_RECOVERY\_FILE

The Closing Price Recovery file is a csv file provided by the Exchange as a way for members to retrieve the closing price information in case there are issues with the standard flow (through Market Data messages).

The general rule is that the file isn't available, only on very specific situations the file is going to be generated and provided. When relevant, the file is made available through CFTS Referential Data Service.

The file may contain data related to a single or several Optiq segments.

Regarding the file technical details:

- Csv format, with a comma separator;

- File name: closing\_price\_recovery\_<yyyyMMdd>\_<hhmmss>.csv.

Field	Short Description	Format	Len	Values	Presence

### 3.18 EXCHANGERATESFILE (9024)

The Exchange Rates File is an XML file. It provides, on a daily basis, currency exchange rates for various currency pairs against euro, sourced from a data provider.

The file contains the closing exchange rates from the previous trading day, which are intended to be used for the current trading day.

Those exchange rates might be used on the Optiq platform for different purposes (e.g. Order Amount Limit conversion in euro as part of the Riskguard OAL command).

- File Availability: This file is available at the start of day and is needed by the Customers for the trading day. Customers must be able to download and process this file on a daily basis.
- Scope of contents: Exchange Cash segments except structured products (equities, funds, fixed income, block).
- Intraday updates: No intraday updates. This file will be updated overnight.

File name will follow this template:

#### Annualisation Factor

FIELD NAME	ANNUALISATIONFACTOR
Description	Always equal to 360
Format	Numerical
Length	1
Possible Values	360
Used In	<a href="#">Total Return Futures Conversion Parameters files</a>

#### Anonymous

FIELD NAME	ANONYMOUS
Description	Indicates if the Market Data notifications on the instrument are anonymous or not. (0: Non Anonymous – Member Firm ID published ; 1: Anonymous – Member Firm ID not published).
Format	Boolean
Length	1
Possible Values	0 = Non Anonymous 1 = Anonymous
Used In	<a href="#">CashStandingDataFile (9007)</a>

#### APF Index ID

FIELD NAME	APF INDEX ID
Description	Identifier of the APF table
Format	Numerical ID
Length	2
Possible Values	0..2 <sup>16-2</sup>
Used In	<a href="#">Authorized Price Fluctuation File (9008)</a>

## AQS Multiplier

FIELD NAME	AQS MULTIPLIER
Description	Actual Quality Spread Multiplier. Enable to calculate the Actual Quality Spread to know whether the DCRP is Mid-BBO or Fair Value (to be calculated with the Ratio / Multiplier Decimals).
Format	Numerical (unsigned integer 32)
Length	4
Possible Values	0..2 <sup>32</sup> -2 Null value: 2 <sup>32</sup> -1
Used In	<a href="#">ReferenceSpreadsFile (9045)</a>
User For	Derivatives

## Asset Class

FIELD NAME	ASSET CLASS
Description	Defines the Asset Class for a group of products.
Format	Enumerated
Length	3
Possible Values	EQT = Equities BoB = Best of Book (BoB) TRP = Trade Reporting and Publication SIS = Société Générale Systematic Internalizer (SI) ETF = ETFs FIX = Fixed Income WAC = Warrants and Certificates BDL = Luxembourg Stock Exchange EQO = Equity Options IDO = Index Options CCO = Currency Options ATO = AtomX (for Flex Contracts) EIF = Equity and Index Futures CCF = Currency Futures COD = Commodity Derivatives EXI = Euronext Indices INA = Euronext iNAVs TPI = Third Party Indices APA = Approved Publication Arrangement

## AUM

FIELD NAME	AUM
Description	Stands for Asset Under Management. Indicates the fund's total market value (to be calculated with the Amount Decimals).
Format	Amount (unsigned integer 64)
Length	8
Possible Values	0..2 <sup>64</sup> -2 Null value: 2 <sup>64</sup> -1
Used In	<a href="#">CashStandingDataFile (9007)</a>
User For	Cash

## Authorized Price Fluctuation

FIELD NAME	AUTHORIZED PRICE FLUCTUATION
Description	Lower Limit of the APF range. Price with '.' as a separator followed by 7 decimals.
Format	Price
Length	8
Possible Values	From $-2^{63}+1$ to $2^{63}-1$
Used In	<a href="#">Authorized Price Fluctuation File (9008)</a>

## Authorized Price Fluctuation Type

FIELD NAME	AUTHORIZED PRICE FLUCTUATION TYPE
Description	Indicates whether the APF is expressed in Percentage or Absolute Value
Format	Enumerated
Length	1
Possible Values	1 Percentage 2 Absolute Value
Used In	<a href="#">Authorized Price Fluctuation File (9008)</a>

## B

## Benchmark Style

FIELD NAME	BENCHMARK STYLE
Description	Instrument Benchmark Style
Format	Enumerated (unsigned integer 8)
Length	1
Possible Values	1 Emerging 2 Corporate and Government Bond 3 Style 4 Developed Markets 5 Others 6 Currencies 7 Commodities 8 Cryptocurrencies
Used In	<a href="#">CashStandingDataFile (9007)</a>

## BIC Main Depository

FIELD NAME	BIC MAIN DEPOSITORY
Description	Identifies the BIC of the default depository organization.
Format	Alphanumerical ID (character)
Length	11
Used In	<a href="#">CashStandingDataFile (9007)</a>
User For	Cash

## Block Price Control ID

FIELD NAME	BLOCK PRICE CONTROL ID
Description	ID of the Block Price Table.
Format	Numerical ID (unsigned integer 16) XML: unsigned integer 16
Length	2
Possible Values	0..2 <sup>16</sup> -2 Null value: 2 <sup>16</sup> -1
Used In	<a href="#">CashStandingDataFile (9007)</a>
User For	Cash

## Bloomberg Ticker Code

FIELD NAME	BLOOMBERG TICKER CODE
Description	Indicates the Bloomberg Ticker Code.
Format	Alphanumerical ID (character)
Length	13
Used In	<a href="#">CashStandingDataFile (9007)</a>
User For	Cash

## Bps High Collar

FIELD NAME	BPS HIGH COLLAR
Description	Indicates the High collar applied on the NAV order book of ETF MTF. It is derived from the creation fees of the primary market. Information expressed in basis points (bps) (to be calculated with the Price/Index Level Decimals).
Format	Price (signed integer 64)
Length	8
Possible Values	-2 <sup>63</sup> +1..2 <sup>63</sup> -1 Null value: -2 <sup>63</sup>
Used In	<a href="#">CashStandingDataFile (9007)</a>

## Business Day Offset

FIELD NAME	BUSINESSDAYOFFSET
Description	Always equal to 2
Format	Numerical
Length	1
Possible Values	2
Used In	<a href="#">Total Return Futures Conversion Parameters files</a>
User For	Derivatives

## Buy Back Indicator

FIELD NAME	BUY BACK INDICATOR
Description	Flag indicating whether the buy back functionality is activated or not (0: deactivated; 1: activated).
Format	Boolean (unsigned integer 8)
Length	1
Possible Values	0..2 <sup>8-2</sup> Null value: 2 <sup>8-1</sup>
Used In	<a href="#">CashStandingDataFile (9007)</a>

## C

### CFI

FIELD NAME	CFI
Description	Classification code of a financial instrument defined by the ISO-10962:2015 standard.
Format	Text (character)
Length	6
Used In	<a href="#">CashStandingDataFile (9007)</a> <a href="#">DerivativesStandingDataFile (9013)</a>

## Trading Unit

FIELD NAME	TRADING UNIT
Description	Amount of underlying instrument per unit of a derivative contract (to be calculated with the Quantity Decimals). Due to corporate actions, the value may be different between value provided within this field in Contract Standing Data and Outright Standing Data. Value in Outright Standing Data reflects the adjustment due to the corporate action and should be used for that Outright instrument. Trading Unit field does not support decimals and so Lot Multiplier field is introduced to handle integer and decimals. Lot Multiplier field should be used instead of Trading Unit. Trading Unit field is, therefore, populated only for Euronext legacy contracts and instruments.
