PREFACE

PURPOSE

The purpose of this document is to describe the Optiq Market Data Gateway.

TARGET AUDIENCE

This document should be read by Euronext's clients developing a Market Data Feed Handler.

SCOPE

The scope of this document is listed below¹ (✓ In scope, ✗ Out of scope):

| OPTIQ SEGMENT | SEGMENT VALUE | IN/OUT OF SCOPE | SBE VERSIONS* |
|--|---------------|-----------------|----------------|

¹ How to read the 'SBE versions' information provided in the table:

- When two version numbers are provided with '-' between them, it means that any version between those two versions can be used to access the Optiq segment (SBE forward/backward compatibility).
- When two version numbers are provided with '/' between them, it means that members must use the last version to access the Optiq segment because the SBE compatibility is broken between them.
- When only one version is provided, it means that this version only can be used to access the Optiq segment.

1. EURONEXT OPTIQ MARKET DATA GATEWAY SOLUTION

1.1 INTRODUCTION

The Euronext Optiq Market Data Gateway (MDG) provides high-speed, real-time market data for Euronext markets.

The data feed has the following high-level features:

- Multicast technology
- Ultra-low latency
- EU and UK MiFID II compliance
- Cash & Derivatives message harmonization
- Optimized feed for each type of connectivity
- High availability
- Reliable network solution
- High level of scalability
- Access to a wide range of European market data sets

This document provides detailed information about the features of the feed to support the development of client applications.

The APA/ARM sections of this document comply with the governance requirements under the UK DRSP regulatory framework.

1.2 EU AND UK MIFID II

Markets in Financial Instruments Directive 2 (MiFID II) is a European Commission set of new regulations to reduce systemic risk and guarantee more transparency for clients. The laws and regulations of EU MiFID II will be effective as of January 3, 2018. It has been amended and transposed into the laws of the United Kingdom pursuant to the European Union (Withdrawal) Act 2018 and the European Union (Withdrawal Agreement) Act 2020, is referred to as "UK MiFID II" and has been effective since January 1, 2021.

Euronext Optiq Market Data Gateway is EU and UK MiFID II compliant by offering:

- Market Data channel disaggregation
 - Each multicast channel published by MDG is disaggregated as follows: asset class, currency and country. Additionally, there are dedicated channels for pre-trade and post-trade.
- Higher Transparency
 - The Full Trade Information message (1004) delivered by Optiq MDG will carry MMT Trade flags and other fields as required by EU and UK MiFID II.

1.3 GLOSSARY

Euronext Approved Publication Arrangement (APA):

It is an EU and UK MiFID II Regulatory trade publication facility allowing clients to receive required trade reporting data through a Market Data Feed Handler for APA publication. Also applicable in the United Kingdom onshored regulations.

Euronext Synapse:

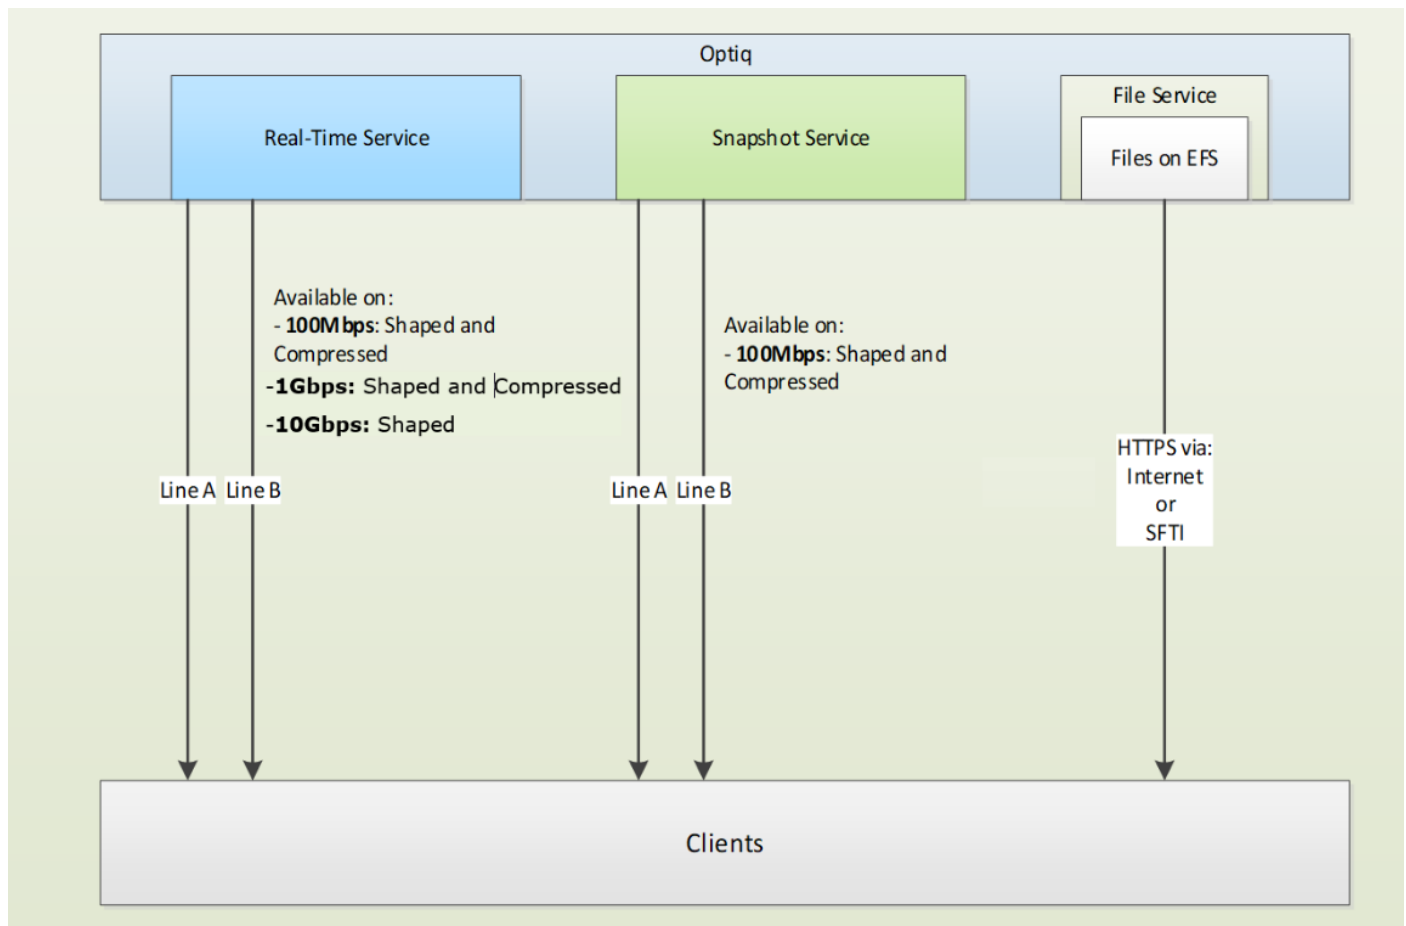

It is a Multilateral Trading Facility (MTF) that connects pools of liquidity and market participants within a new anonymous inter-dealer centralised market place. It links banks and their customers together for liquidity, execution and reporting services with the appropriate level of protection for fixed income markets. When using this facility clients are subscribed to Euronext Synapse Market Data.

The table below provides the mapping between Euronext field name and ESMA name in order to facilitate the aggregation of data by Market Data consumers.

| Euronext Name | ESMA Name |
|--|--|
| Trading Date Time | Trading date and time |
| MiFID Instrument ID | Instrument identification code |
| MiFID Price | Price |
| Missing Price | Missing Price |
| MiFID Currency | Price currency |
| MiFID Price Notation | Price notation |
| MiFID Quantity | Quantity |
| Venue | Venue of execution |
| Publication Date Time | Publication date and time |
| Trade Unique Identifier | Transaction identification code |
| MiFID Quantity Measurement Unit | Quantity in measurement unit |
| MiFID Qty in Measurement Unit Notation | Notation of the quantity in measurement unit |
| MiFID Notional Amount | Notional amount |
| Notional Currency | Notional currency |
| MiFID Emission Allowance Type | Type |
| MiFID Clearing Flag | Transaction to be cleared |

1.4 ACCESS TO MARKET DATA

The following diagram presents the Optiq MDG services:

Clients access Market Data as follows:

- **Real-Time service:** Clients connect to multicast UDP/IP channels to receive Market Data messages in real-time
- **Snapshot service:** Clients connect to multicast UDP/IP channels to receive unsolicited Snapshots sent periodically on dedicated multicast channels to recover from packet loss or for intraday starts.
- **File service:** Clients connect to a file server every morning to download XML files containing static and daily data (Standing Data, Timetables, Tick Tables, XML SBE template, Pattern IDs and Feed Configurations).

Market Data are available in the following modes:

- **Shaped:** Allow optimized emission of Market Data with low latency, optimized bandwidth use and packet loss prevention (service available on the 100 Mbps, 1 Gbps and 10 Gbps lines)
- **Compressed:** Messages are compressed in order to reduce the use of bandwidth (available on 100 Mbps lines, and on 1 Gbps channels for Warrants)

Other methods could be available in the future upon performance analysis study.

Two recovery mechanisms are available:

- **Line arbitration:** Identical packets are sent on two lines (line A and line B). Clients are strongly invited to use this first recovery mechanism in case of message loss

- **Snapshot service:** If messages are lost on both lines or if a client connects intra-day

1.5 MESSAGING PROTOCOL AND PUBLISHING MODEL

Real-time and Snapshot Market Data are message-based over the UDP/IP protocol with SBE (Simple Binary Encoding). This binary encoding is optimized for low latency encoding and decoding while keeping bandwidth utilization reasonably small and is used across all asset classes.

The process of subscribing to a multicast group ID is also known as “joining” a multicast group. Upon session termination, the member’s host system should issue an “unjoin” message. This will terminate delivery of data to that local host network. If a client application terminates without issuing an “unjoin” message, the network will eventually issue a “timeout” for the multicast group subscription that will automatically terminate delivery of the multicast packets to the local host network. The “join” and “unjoin” processes are standard functions. No specific instructions are provided here, as they are specific to the user’s operating system and programming language.

Using the push-based publishing model, data will be published as soon as it is available.

1.6 FUTURE USE

In preparation for various functionalities expected to be implemented in the future on Optiq, a number of fields and values were added and flagged ‘For Future Use’.

Details of functionalities flagged in the specifications as for ‘Future Use’ are provided for information purposes only, and may change significantly until such time as the finalised specifications for the relevant service are communicated to clients.

The effective use of fields and/or values will not be technically supported until the announced date for implementation of these functionalities.

Note: Fields and Values for future in the messages structures are represented in *italic and in grey*.

2. MARKET DATA CHANNELS

2.1 TYPE OF MARKET DATA CHANNELS

2.1.1 Market Data Channels

Euronext offers real-time and snapshot Market Data through different channels that clients can subscribe to. Each channel is linked to a unique IP multicast group address and a unique port.

Channels are split according to the following criteria:

- **Asset Class:** EU and UK MiFID II requirement
- **Country of issue:** EU and UK MiFID II requirement
- **Currency:** EU and UK MiFID II requirement
- **Real-time or Snapshot:** Real-time and snapshot messages are sent through different channels
- **Types of data:**
 - Full Order Book Market Update pack (FBMU) provides Market by Limit (full price limit depth) and BBO using the Market Update message.
 - Full Order Book Order Update pack (FBOU) provides Market by Order (full order book depth) using the Order Update message and BBO with Market Update.
 - Best Bid and Offer pack (BBBO) will only provide the best limits when they are updated.
 - Reference Data and Full Trade Information pack (REFT) provides all instrument characteristics, scheduled phases, market administration messages and EU and UK MiFID II compliant trade messages. Index messages are included in this channel only for Luxembourg Stock Exchange (LuxSE).
 - Reference Data and Index Package pack (REFI) provides all instrument characteristics, scheduled phases, market administration messages and Index messages.
 - Reference Data and Trade & NAV Information and Instrument Suspension pack (IBFR) provides Non Traded Bonds and Funds characteristics, Trade, NAV and instrument State Information.
 - APA Trade Reporting and Referential pack (APRT) provides all instrument characteristics, scheduled phases, market administration messages and EU and UK MiFID II compliant trade messages. It also includes trade from Euronext Synapse.
 - APA Systematic Internalized Quotes and Referential pack (APSI) provides all instrument characteristics and quotes.
- **Scalability:** For performance reasons, a feed can be split into several channels. It is also possible for an instrument to move from one channel to another, although intraday changes will not occur. Such changes would be communicated to clients with advance notice.

Note:

On-Exchange Off-Book (OEOB) covers multiple types of activity, that are identified in the *EMM* field. References to OEOB below comprise the following EMMs:

- For the Cash markets: 5 (Cash On Exchange Off book)
- For the Derivatives markets: 4 (Derivative Wholesales) and 7 (Derivative On Exchange Off book)

The mentioned channels are available for COB and On-Exchange Off-Book (OEOB). These are described by Asset Classes and organized in the table below by EU and UK MiFID II disaggregation of Asset Class + Currency + Country (and in several cases, + sub-segment MIC):

² While Equities IPO France concerns equities instruments, it is hosted for technical reasons in the BLK (Blocks) Optiq segment

³ Italian indices are not disseminated via MDG

Example of Market Data Channels:

- Equities – France – All currency – Unshaped – Real-time – FBMU

2.1.2 Client Connectivity

The subscription to a set of channels depends on the type of client connectivity. For example, if a client has a 100 Mbps line, then he cannot subscribe to the shaped channels on 10 Gbps nor subscribe to the shaped BBO channels for example, which are only available on 1 Gbps lines. 1 Gbps clients cannot subscribe to the 10 Gbps lines. Conversely, a client with a 10 Gbps line can subscribe to all available channels like the Full Order Book channels (either shaped (10 Gbps or 1 Gbps) as well as to the compressed and shaped channels (100 Mbps and on 1 Gbps channels for Warrants).

2.1.3 Market Data Messages per Channel

Optiq MDG will provide the Full Order Book (FOB) in two different ways based on instrument type:

- **Market by Order (FBOU - Full Book Order Update):** The **Order Update** (1002) message will be disseminated for each new order, modification or cancellation.
- **Market by Limit (FBMU – Full Book Market Update):** Price levels with aggregated volume and associated number of orders are published using the **Market Update** (1001) message.

Note:

- On FBOU: updates are only applicable on Optiq segments where the order book and its market data are provided by orders
- On FBOU and FBMU: BBO is provided through **MarketUpdate** (1001) messages

The following table provides an overview of all Optiq MDG messages. The aim is to provide a better understanding of the message types per channel table.

| MESSAGE NAME | MESSAGE TYPE | DESCRIPTION |
|------------------------|--------------|---|
| Start Of Day | 1101 | First message of the day sent by the Market Data Gateway |
| End Of Day | 1102 | Last message of the day sent by the Market Data Gateway |

3. MARKET DATA GATEWAY FEATURES

3.1 START AND END OF DAY

Start Of Day (1101) messages are sent on each channel once the Market Data Gateway starts. These messages will be sent periodically until another MDG message is sent on any channel of an aggregator (please refer to [The Market Data Sequence Number](#) paragraph for aggregator description). After the Start of Day messages, the Health Status (1103) messages will be sent periodically.

This mechanism guarantees that Start Of Day (1101) messages are the first messages sent by MDG.

At end of day, MDG will stop sending messages (including Health Status (1103)) and will periodically send End Of Day (1102) messages during a specified period before shutting down.

3.2 BOOK RETRANSMISSION

The Book Retransmission is an automated MDG process used by Optiq MDG to ensure continuity of the Market Data feed. It allows to retransmit at start of day the order books data following the previous trading day but also to resynchronize the Market Data feed in case of high availability event on Optiq platform (software recovery mechanism).

This process consists of resubmitting the depth of the book on real-time channels. This book retransmission occurs:

- Every morning at the start of the day.
- Intraday in case of HA recovery event.

3.2.1 Clear the Book

Before any market retransmission, Optiq MDG will send a clear book request.

For the first clear book, at the beginning of the day, customers are expected to clear any stored information for any Market Data Update Type values received the previous day.

For any intraday clear book request, customers are expected to clear only the Market Data Update Types related to the specific order book, listed below, and keep all other Market Data Update Type values unchanged.

- 1 - Best Bid (Cash and Derivatives)
- 2 - Best Offer (Cash and Derivatives)
- 3 - New Bid (Cash and Derivatives)

- 61 - Updated Offer With Liquidity Provider (Cash Only)
- 63 - Low Static Collar
- 64 - High Static Collar
- 70 - Low LP Collar (Cash Only)
- 71 - High LP Collar (Cash Only)

For market by orders, clients will receive an **Order Update** (1002) (and a **Long Order Update** (1015) for Fixed Income segment) with Market Data Action Type set to "3 - Deletion of all orders for the given instrument", quantity set to '0' (zero) and all other fields set to null according to the SBE protocol.

3.2.2 Morning Book Retransmission

At the initialization of each new trading day the exchange uses the following broadcasting sequence:

1. Date of trading session in **Start Of Day** (1101)
 - Market Data Sequence Number set to 0
2. Trading patterns in **Timetable** (1006)
3. Instrument characteristics in **Standing Data** (1007)
4. Contract reference data in **Contract Standing Data** (1013)
5. Outright reference data in **Outright Standing Data** (1014)
6. Strategy reference data in **Strategy Standing Data** (1012)
7. Book state inaccessible in **Market Status Change** (1005)
 - Book state: 'Inaccessible'
 - Trading period: 'Opening'
 - Rebroadcast Indicator: 0
8. Clear book in **Order Update** (1002)*
 - Market Data Action Type: 3 – Deletion of all orders by side
 - Rebroadcast Indicator: 0
9. Clear book in **Long Order Update** (1015)**
 - Market Data Action Type: 3 – Deletion of all orders by side
 - Rebroadcast Indicator: 0
10. Clear limits in **Market Update** (1001)
 - Market Data Update Type: 254 – Clear Book
 - Rebroadcast Indicator: 0
11. Reference Price and Settlement in **Price Update** (1003)
 - Market Data Price Type: 12 = Adjusted Closing Price, 9 = Official YDSP
 - Rebroadcast Indicator: 1
12. Full depth book in **Order Update** (1002)*
 - Market Data Action Type: 5 - Retransmission of all orders for the given instrument
 - Rebroadcast Indicator: 1

13. Full depth book in **Long Order Update** (1015)**
 - Market Data Action Type: 5 – Retransmission of all orders for the given instrument
 - Rebroadcast Indicator: 1
14. BBO in **Market Update** (1001)
 - Market Data Update Type: 1 - Best Bid and 2 - Best Offer
 - Rebroadcast Indicator: 1
15. Full depth in **Market Update** (1001)
 - Market Data Update Type: 3 – New Bid and 4 - New Offer
 - Rebroadcast Indicator: 1
16. End of book retransmission in **Technical Notification** (1106)
 - Technical Notification Type: 1 – Instrument Book Retransmission End
17. Closed in **Market Status Change** (1005)
 - Book state: 'Closed'
 - Rebroadcast Indicator: 1

*Note: The messages highlighted are only applicable on segments providing the order book by orders.

**Note: The messages highlighted are only applicable on Fixed Income segment.

3.2.3 Intraday Book Retransmission

A Market Update (1001) or Order Update (1002) message is sent for each instrument, respectively filled with *Market Data Update Type* = '254' (Clear Book) or *Market Data Action Type* = '3' (Deletion of all orders for the given instrument). Then the full book depth will be resent with *Rebroadcast Indicator* set to '1'.

For Market Update (1001) messages: limits will be aggregated, and the *Market Data Update Type* field will be '5' (Updated Bid) or '6' (Updated Offer) or "Updated Bid/Offer RLP" etc. At the end of book retransmission a Technical Notification (1106) is sent to indicate the '1' (Instrument Book Retransmission End).

For Order Update (1002) messages: each order will be resent with *Market Data Action Type* = '5' (Retransmission of all orders for the given instrument).

In order to differentiate a book retransmission from real time messages, the *Rebroadcast Indicator* is set to '1'.

Note: For Fixed Income segment, Order Update (1002) messages are followed by Long Order Update (1015) messages.

3.3 SNAPSHOTS

Snapshot is a service providing an image of the market data at a given time of the day to allow clients to recover from packet loss or for intraday starts. Customers can 'hop on' (connect) and 'hop off' the Snapshot multicast channels as needed.

Each real time channel has a matching snapshot channel. Real time channels giving the same information through different bandwidth speed share the same snapshot channel. An image contains all instruments broadcasted on this channel.

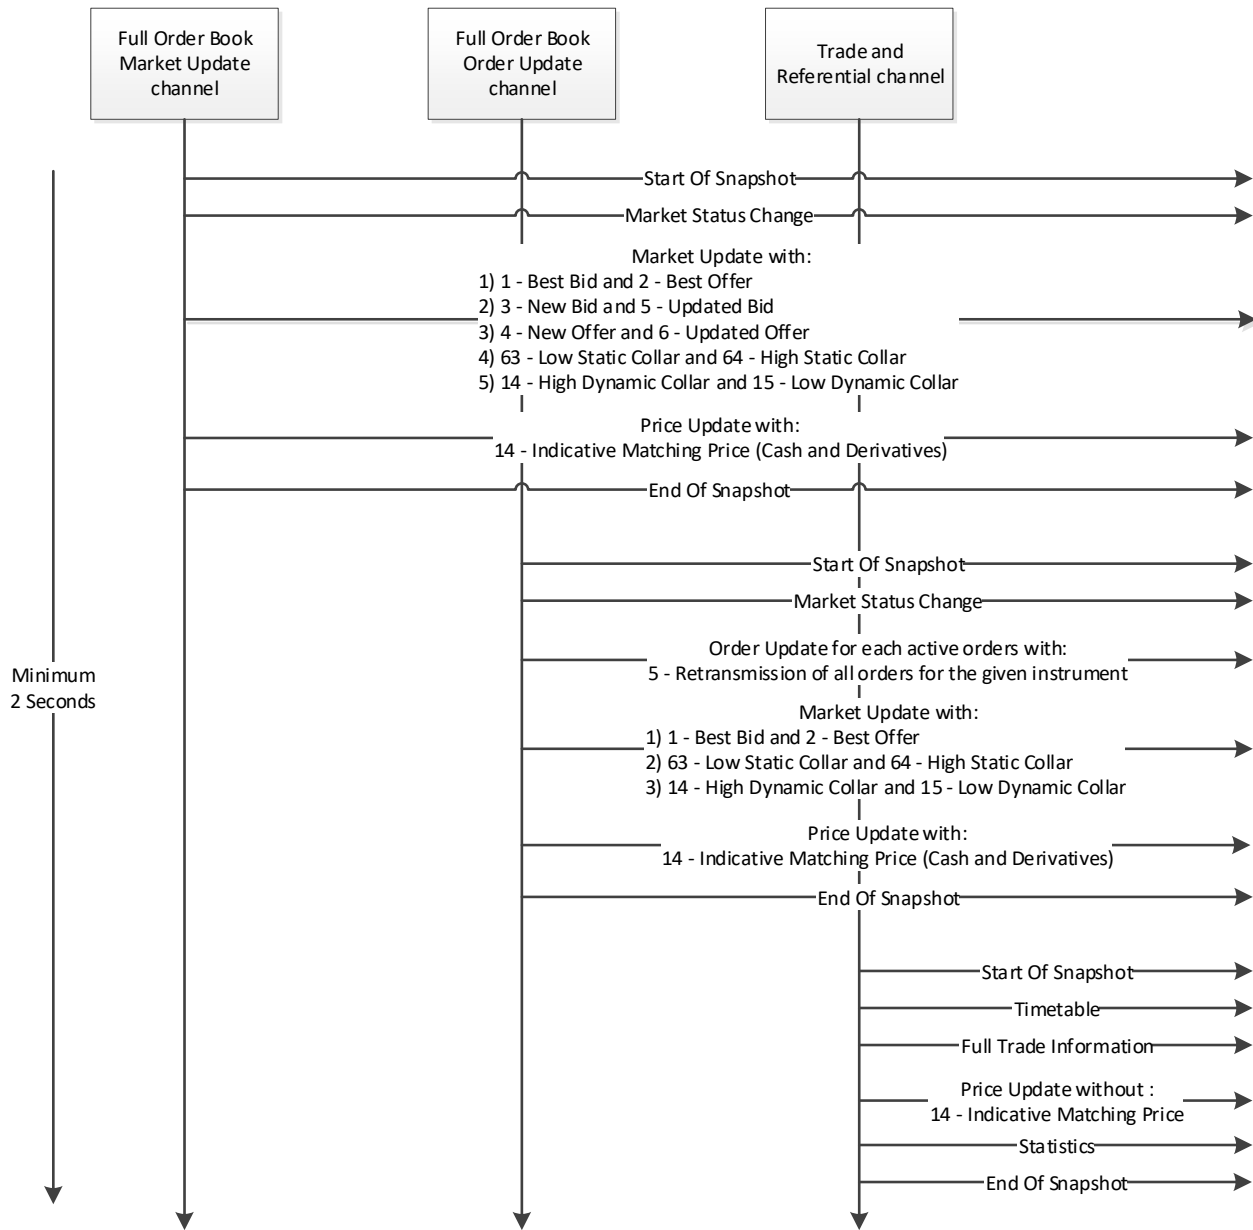

An image sent in the snapshot is linked to real time with the Last *Market Data Sequence Number* from the real time channel.

This broadcasted image of all channels of an aggregator (see section on [Market Data Sequence Number](#)) is a snapshot sequence and cannot be sent more than 1 every 2 seconds. The order of each channel images in a snapshot sequence is fixed for a day but can change from one day to another.

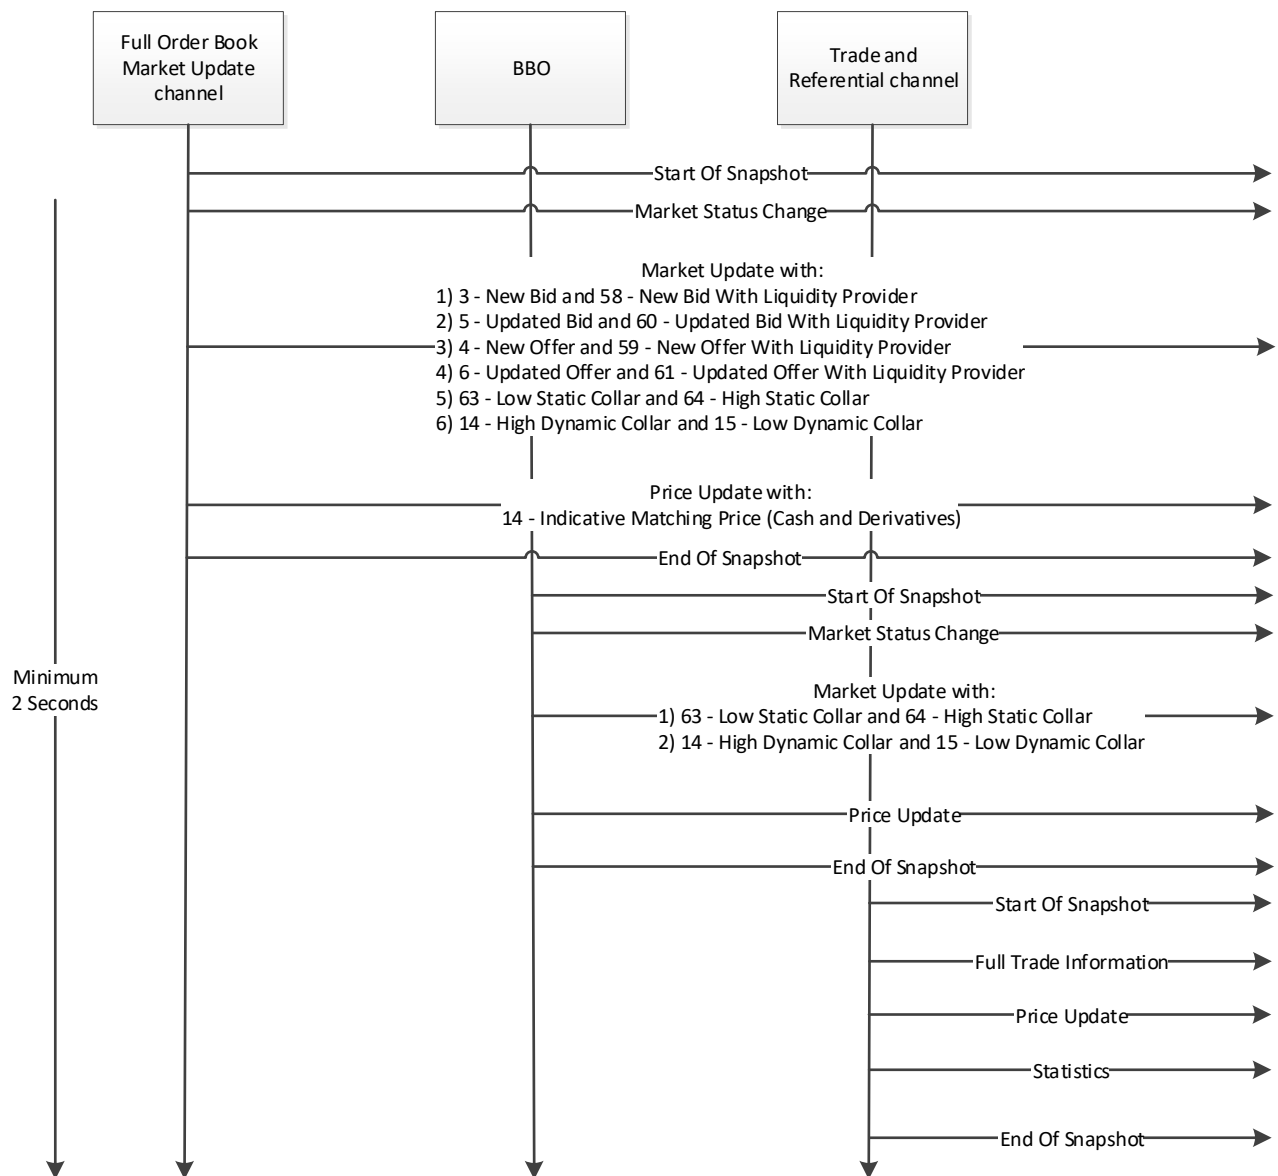

They will use the same messages as real time messages with *Rebroadcast indicator* set to '1'.

Here are the snapshot sequences for Cash, Derivatives, Indices and Best of Book (BoB):

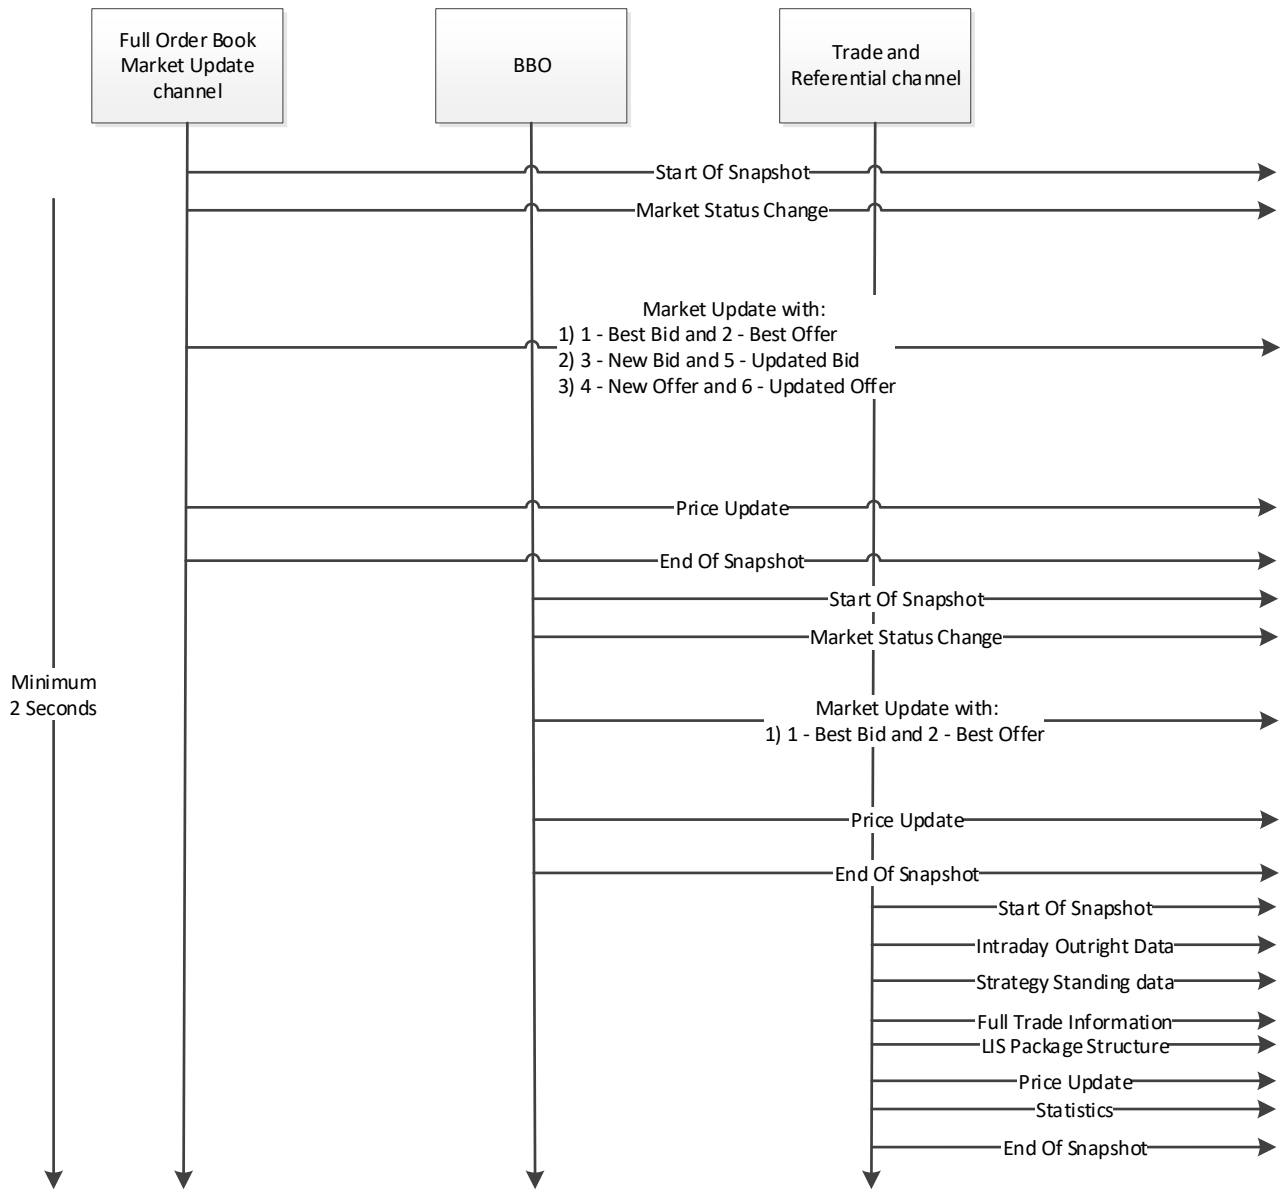

■ Snapshot sequence for Equities, Fixed Income and Funds:

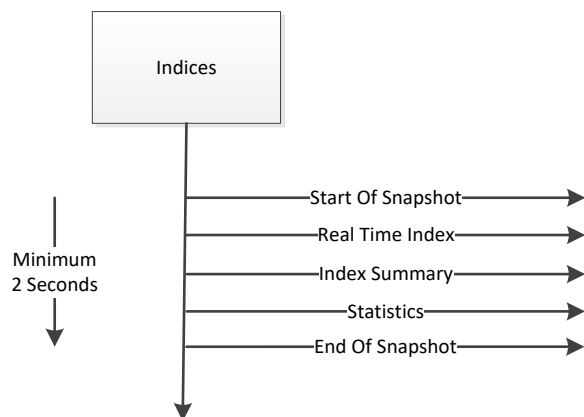

■ Snapshot sequence for Warrants:

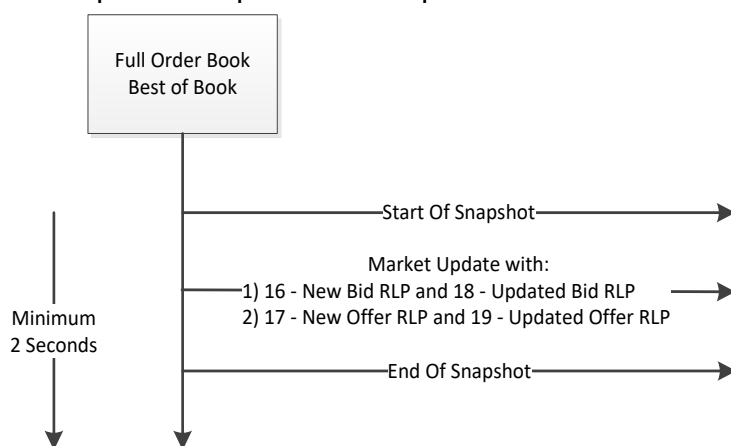

■ Snapshot sequence for Equities Derivatives, Indices Derivatives, and Commodities:

■ Snapshot sequence for Indices:

■ Snapshot Sequence for Equities Best of Book:

Both Start Of Snapshot (2101) and End Of Snapshot (2102) messages contain the last *Market Data Sequence Number* (MDSN) of the last real-time message taken into account by the snapshot (see [Sequence Numbers](#) and [Snapshot Sequence behaviour](#) for explanations on the MDSN). This last MDSN has been sent on each channel speed.

In the 2 following situations:

- Late connection to the exchange
- Loss of packets on both lines A and B

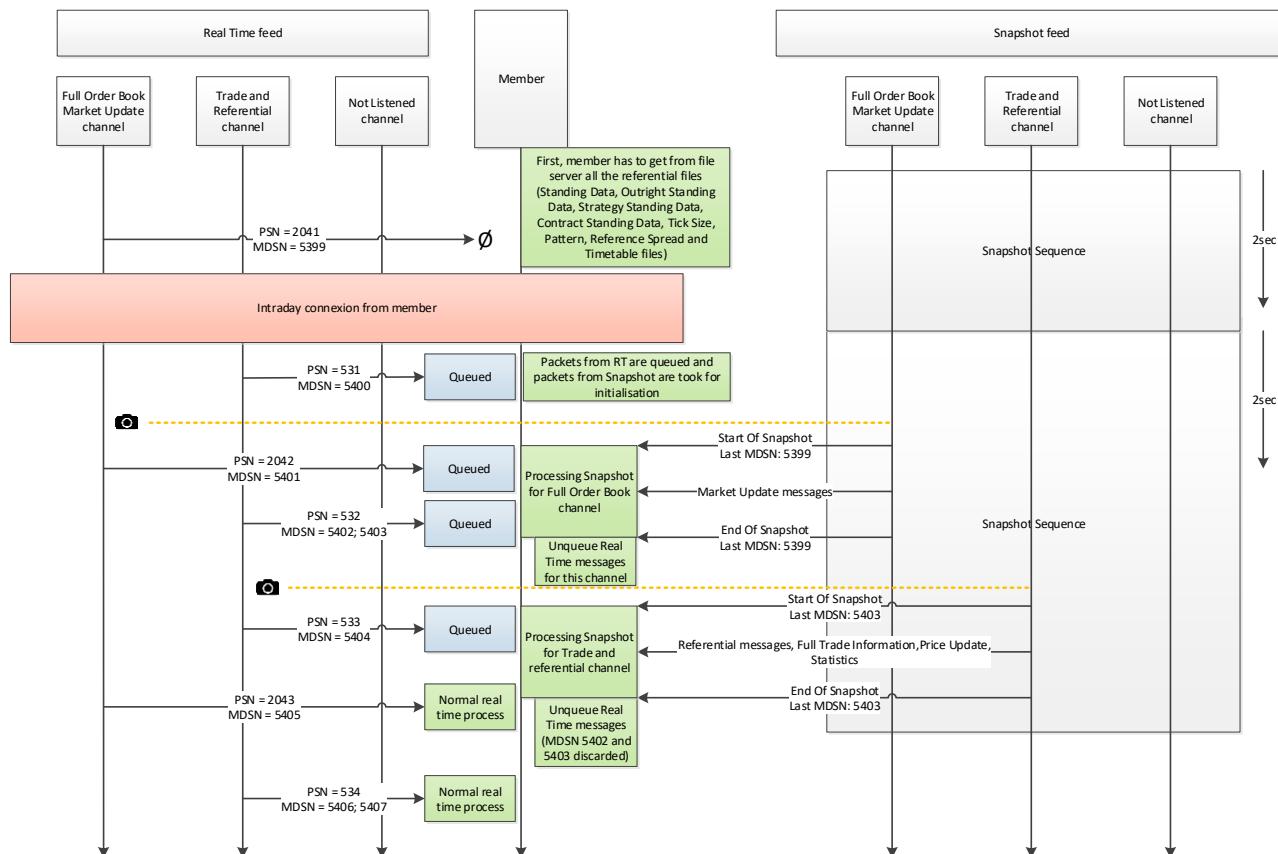

Members have to process as follow:

- Clear all the market data sent on this channel.
- Listen to the real time channel and start queuing all messages.
- Identify the lowest MDSN from real time feed.
- Wait for a **Start Of Snapshot** with a Last *Market Data Sequence Number* that is higher or equal to the MDSN identified just before on real time. Otherwise the Snapshot might not contain all the missing messages.
- Listen to the entire snapshot image until the **End Of Snapshot**.
- Discard all the real time messages with a MDSN lower or equal than the Last *Market Data Sequence Number* of the Start or End Of Snapshot message.
- Integrate all the remaining real time messages into the snapshot image.
- Keep listening real time as normal.

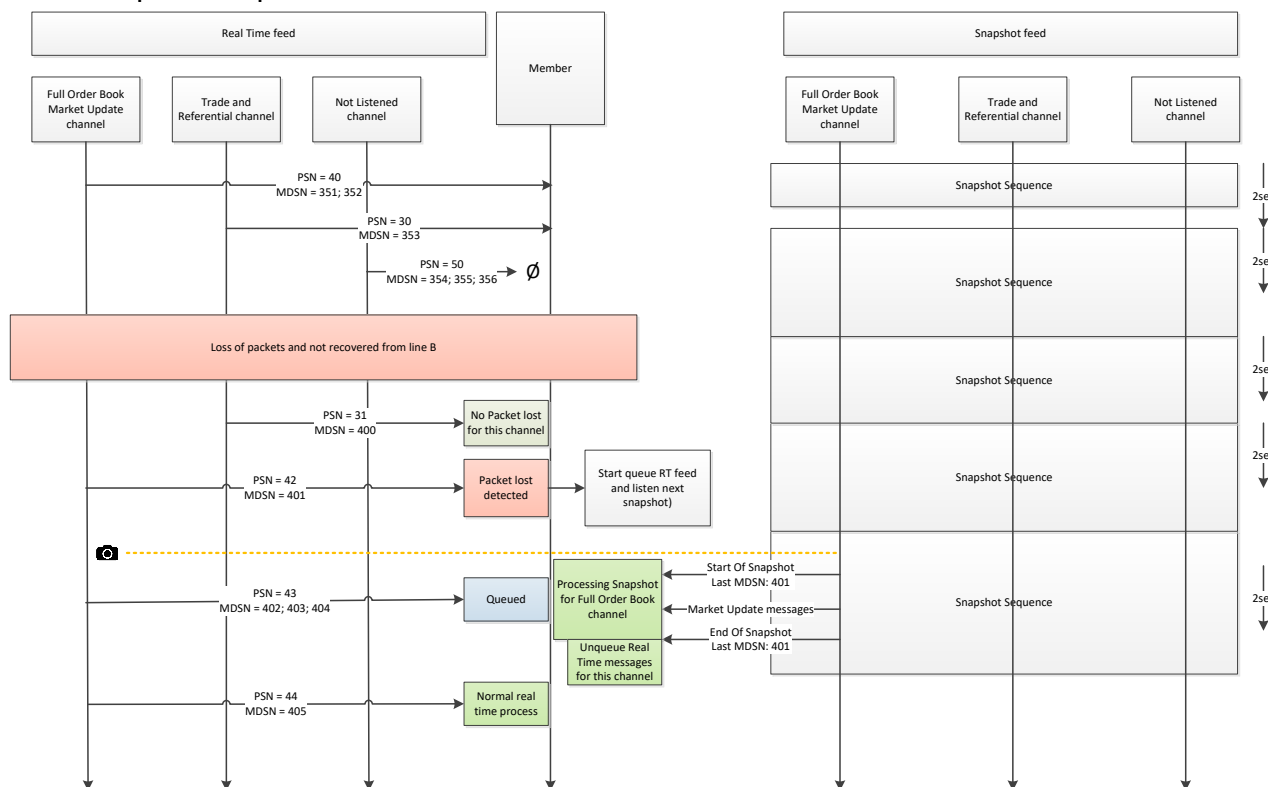

If in the snapshot a packet is missing, then try to get this packet from the second line. If it has not been retrieved with the second line, then use the next snapshot for this channel.

It is important to note that since the Market Data Sequence Number of snapshot channels does not necessarily increment by 1, the sequence number in the start or end snapshot messages might belong to another channel and was in fact not actually lost. In order to correctly identify which packets are indeed lost, please refer to section [Gap Detection and Line Arbitration](#).

■ Example of a late connection to the exchange:

■ Example of a packet loss:

■ How to use information type:

MDG offers another mechanism in the snapshot to resynchronize only for a subset of the information whatever the Symbol Index.

This information is functionally gathered into information type:

- For Market Update, the information types are BBO, Full Depth, Collars and Full Depth Best of Book (Please refer to the table below in this section to have all the Market Data Update Type for each Information Type)
- For the other messages, every message type is in a single information type (ex: all the order update messages are in the information type "Order Update")

For example, if members are only interested into the information type BBO and they have lost a packet in the real-time and they have to use the snapshot to recover, they can detect if the lost packet was containing BBO information.

To do so, members have to look at the *Market Data Sequence Number (MDSN)* of snapshotted messages. If for one information type, the MDSN in a snapshot message is lower or equals to the MDSN of a message received in real time (for this information type), it means that no messages have been lost for this information type.

The following table provides the exact mapping between *Market Data Update Type* and Information Type.

| MARKET DATA UPDATE TYPE | INFORMATION TYPE |
|---------------------------------------|------------------|
| 1 - Best Bid (Cash and Derivatives) | BBO |
| 2 - Best Offer (Cash and Derivatives) | |

| MARKET DATA UPDATE TYPE | INFORMATION TYPE |
|--|-------------------------|
| 3 - New Bid (Cash and Derivatives) | Full Depth |
| 4 - New Offer (Cash and Derivatives) | |
| 5 - Updated Bid (Cash and Derivatives) | |
| 6 - Updated Offer (Cash and Derivatives) | |
| 58 - New Bid With Liquidity Provider (Cash Only) | |
| 59 - New Offer With Liquidity Provider (Cash Only) | |
| 60 - Updated Bid With Liquidity Provider (Cash Only) | |
| 61 - Updated Offer With Liquidity Provider (Cash Only) | |
| 14 - High Dynamic Collar (Cash Only) | Collars |
| 15 - Low Dynamic Collar (Cash Only) | |
| 63 - Low Static Collar | |
| 64 - High Static Collar | |
| 70 - Low LP Collar (Cash Only) | |
| 71 - High LP Collar (Cash Only) | |
| 91 - AQS Expansion Factor | |
| 92 - Collar Expansion Factor | |
| 93 - Collar Enabled | Full Depth Best of Book |
| 94 - Collar Disabled | |
| 98 - FSP Triggered | |
| 16 - New Bid RLP (Retail Liquidity Provider) (Cash Only) | |
| 17 - New Offer RLP (Retail Liquidity Provider) (Cash Only) | |
| 18 - Updated Bid RLP (Retail Liquidity Provider) (Cash Only) | |
| 19 - Updated Offer RLP (Retail Liquidity Provider) (Cash Only) | |

Members that connect late just have to take the full snapshot and synchronize with real-time.

Example 1:

If members have the following from the real time:

MDSN for BBO = '98'

MDSN for Full Depth = '80'

MDSN for Collars = '45'

And if in snapshot the Last *Market Data Sequence Number* is '100' with:

MDSN for BBO = '100' (meaning all the messages where *Market Data Update Type* with a value that matches BBO Information Type have a MDSN equal to '100')

MDSN for Full Depth = '80'

MDSN for Collars = '45'

It means that members need to recover all the BBO Information Type but not Full Depth and Collars.

Example 2:

If the last **Market Status Change** message sent had MDSN = '80', then all **Market Status Change** messages in snapshot have MDSN = '80'.

Example 3:

If the last Best Bid sent has MDSN = '1000' in the real-time channel, then all **Market Update** message for Best Bid and Best Ask updates (types '1' and '2') will have MDSN = '1000' in the snapshot too.

3.4 COMPRESSION

Optiq MDG will use LZ4 compression in block mode with no headers. It will be available for real-time market data used on low bandwidth connections (100Mbps and on 1 Gbps channels for Warrants) and for all snapshots. Only the body of the Market Data packets will be compressed, excluding the packet header. It should be noted that a compressed market data packet can contain several different messages, which are all compressed into a single packet.

On compressed channels, it is possible to have compressed and uncompressed packets. The compression flag in the packet header defines if the packet is compressed or not.

The maximum extracted packet size cannot be greater than 8192 bytes.

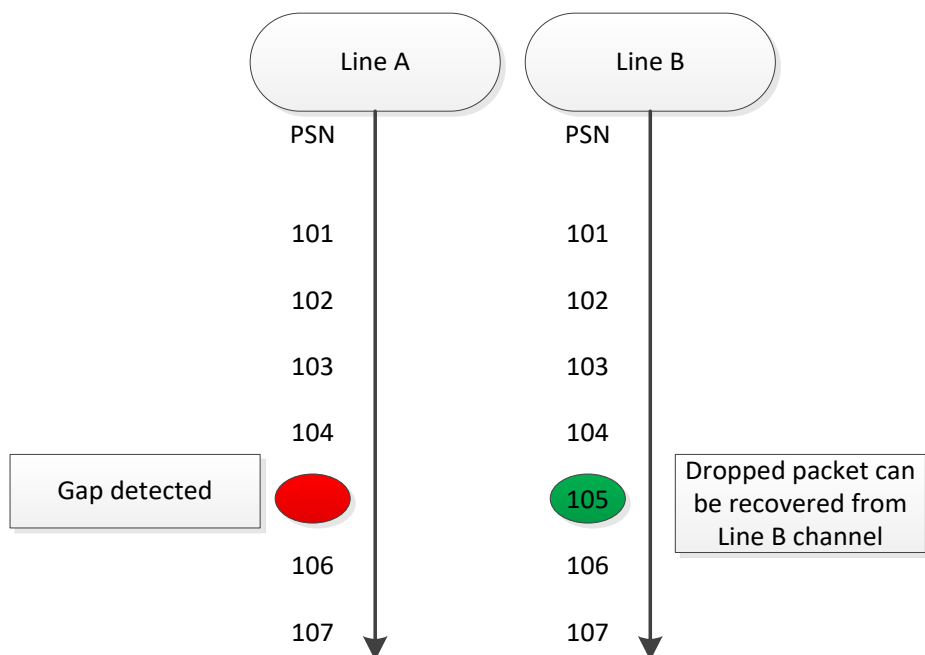

3.5 SHAPING

Optiq MDG Traffic shaping is used for all channels (10 Gbps, 1Gbps and 100 Mbps) connections on both real-time market data and snapshot market data. Traffic shaping by Optiq MDG is used to:

- Optimize the use of available bandwidth
- Prevent packet loss: Optiq MDG will keep track of what is being sent out per millisecond and will use this information to guarantee packets will be sent respecting the available bandwidth
- Guarantee performance
- Minimize latency

3.6 GAP DETECTION AND LINE ARBITRATION

The Packet Sequence Number (please see Market Data Packet Header) should be used to detect gaps in the transmission of packets.

Using this method, a lost packet can be recovered from the second line. In case of packet loss on both lines, then the snapshot mechanism should be used.

UDP packets can potentially arrive unordered and potentially sent twice. As such, systems should be able to reorder the packets and detect duplicate packets.

3.7 SYSTEM FAILURES

■ High Availability:

The High Availability (HA) functionality of Optiq MDG is set up to ensure that there is no loss of service during an outage on the primary publisher, such as a hardware failure. Failover to a secondary publisher can be identified by the change of sequence in the Packet headers (the Packet Sequence Number restarts to '1' and bits between '1' and '3' in the *Packet Flags* field increase by '1'. Keep in mind that these 3 bits can overflow, and it will result with a '0' again). The HA failover is designed to be as transparent as possible, and multicast groups and ports will not change. However, there are specific details that must be considered.

When a market data source restarts and is not able to keep its sequential behaviour, the Market Data Gateway initiates a new start sequence for this source. The Market Data Gateway then sends an order book retransmission sequence, and a list of corrected trades asynchronously inside the real-time channel used for trades. These messages are flagged as a retransmission (*Rebroadcast Indicator* = '1').

As the system is asynchronous, some trades might be lost in case of a matching engine failure. Therefore, the trade retransmission should be used to update the status of each trade that is resent, to complete trades not already taken into account, and even in certain cases, to indicate that some trades should be removed.

Please refer to [Book and Trades Retransmission](#) to have all details on how retransmitted books and trades are.

In case of a MDG restart:

- Clients have to use the *Packet Flags* field (bits 1 to 3) to maintain a unique Packet Sequence Number for the trading day.
- On real-time channels the Market Data Sequence Number (MDSN) is reset to '0' and first functional message that MDG receives gets MDSN 0 and higher.
- Messages that will be sent in snapshots, while there is no message to be resent in real time, will have a MDSN set to "0" (so several messages inside a snapshot can share the same MDSN).
- Clients need to take into account that the Last Market Data Sequence Number (LMDSN) in first Start and End Of Snapshot messages are set to '0' and not set to 'null' as at start-up of MDG.

■ Disaster Recovery Site:

In order to mitigate any serious outage in the primary data centre, a secondary data centre is online in standby mode.

Clients should ensure that all configurations surrounding the secondary data centre are included, as described in the Euronext Optiq Market Data Gateway Production and External User Acceptance Environment documents.

■ Client System Failure:

Real-time and snapshot market data will be available on two different multicast groups and will allow clients the possibility to set up more than one receiving system processing the same data. In case of client system failure, the backup client system should continue to process the real-time and snapshot data sent on the second multicast group.

3.8 TRADE RETRANSMISSION

Trade retransmission will only be used in case of HA event recovery and will be sent on the real-time channels. The retransmission will always start with the Technical Notification (1106) message with *Technical Notification Type* = 10 (Trade Retransmission Start) and contains the *Retransmission Start Time* and the *Retransmission End Time* fields. These times define a time window: all trades previously received with an *Event time* included in this time window must be considered invalid. A new Full Trade Information (1004) message with the *Rebroadcast Indicator* field set to '1' will be sent. The trade retransmission ends with the Technical Notification (1106) message and *Technical Notification Type* = '11' (Trade Retransmission End).

Note: If for a time window that contains trade(s) on real-time feed but no Full Trade Information (1004) messages are rebroadcast in between the Technical Notification (1106) messages, then members have to remove the trade(s) received in real-time.

3.9 HEALTH STATUS MECHANISM

The Health Status (1103) messages will be broadcasted on all channels repeatedly during the day, from the time the Standing Data (1007) messages are broadcasted until the End of Day (1102) messages are sent. The *Market Data Sequence Number* for this message will be the last *Market Data Sequence Number* of the message sent by the aggregator of this channel (please be advised that this message can have been sent on another channel managed by this aggregator).

For aggregators and detailed description please refer to the section [Market Data Sequence Number](#).

For Snapshot, please refer to: [Technical messages in Snapshot channels](#).

3.10 PRODUCTION TIMETABLE

The Timetable is an overview of the events during a trading day that impact market data activity. Clients should also refer to the Timetable (1006) message specifications for full details.

3.10.1 Euronext Cash and Derivatives Markets

| EVENT | TIME (CET) FOR CASH | TIME (CET) FOR DERIVATIVES | COMMENT |
|---|-------------------------------|-------------------------------|---|
| File Download (except for Indices) | 2:00 am CET | | Clients will connect via HTTPS to download: XML SBE templates, Standing Data files, Timetable files, Tick tables, Reference Spread, Feed configuration files and Pattern ID files |
| Application start-up | 2:00 am CET | | Sending Start Of Day (1101) messages and frequently repeated (with Rebroadcast Indicator set to "1") until the beginning of the Standing Data emission in the morning. |
| Standing Data and Timetables in the feed (except for Indices and forex) | 3:00 am CET | | The Exchange will send Standing Data (1007) messages for each instrument and on all markets except Forex instrument it will be send by file, and ISE IBF, BF Instrument Reference (1201) messages for ISE IBF only, followed by the Timetable (1006) message for Cash markets only. |
| Book Retransmission | 4:00 am CET | | Retransmission of books and associated messages from previous day. This will contain Market Update (1001) or Order Update (1002) messages and for some instruments the Price Update (1003) messages. |
| Indices files and messages sent | 3:00 am CET | | Clients will have access to Indices standing data on CFTS and received them in the feed. |
| Broadcast Indices | 7:00 am CET | | Start of Indices emission in the feed. |
| Market Status Change | All along the trading session | All along the trading session | Follow the trading timetable as scheduled in the Timetable message (1006). Refer to Trading Day Schedule: Timetable Mechanism section for full details. |
| Closing and Daily Settlement | NA | Between 5:30 and 9:58 pm CET | |

| EVENT | TIME (CET) FOR CASH | TIME (CET) FOR DERIVATIVES | COMMENT |
|------------------------|---------------------|----------------------------|--|
| Optiq MDG system close | 11:00 pm CET | | The market closes on the End Of Day message (1102) emission. It will be sent for 15 minutes with snapshot messages. No other messages will follow for a given trading Day. |

3.11 MULTICAST GROUP UNJOINING

The process of subscribing to a multicast group ID is also known as “joining” a multicast group. Upon session termination, the client’s host system should issue an “unjoin” message. This will terminate delivery of data to that host’s local network.

If a client application terminates without issuing an “unjoin” message, the network will eventually issue a “timeout” for the multicast group subscription that will automatically terminate delivery of the multicast packets to the host’s local network.

The “join” and “unjoin” processes are standard functions. No specific instructions are provided here, as they are specific to the user’s operating system and programming language.

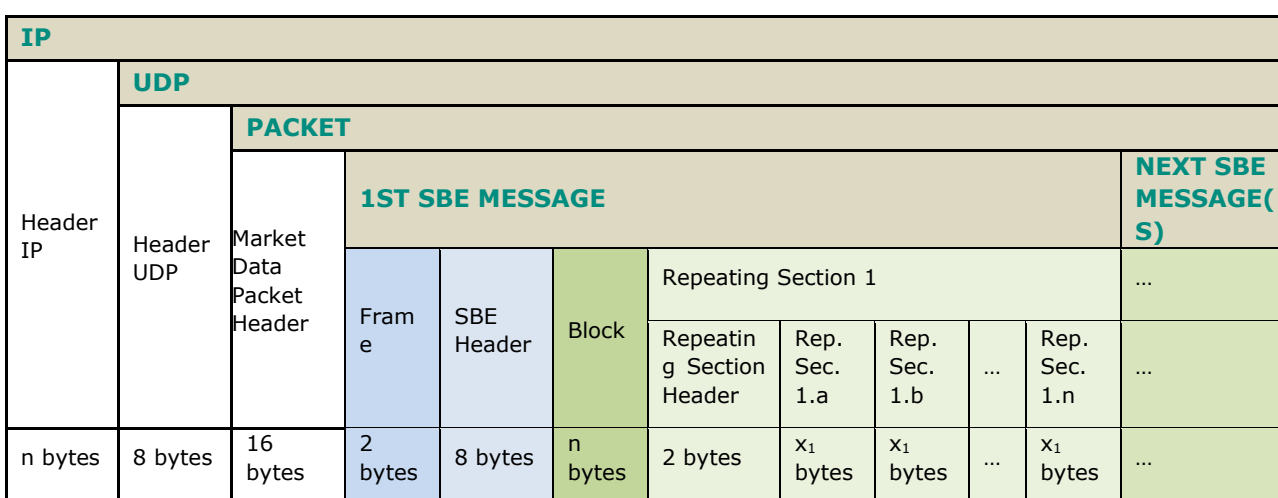

4. MESSAGING PROTOCOL

4.1 OVERVIEW

MDG messages will be sent within a Market Data Packet that will be broadcast using multicast UDP/IP standards. A Market Data Packet will be composed of N complete messages. A single message will never spread across multiple packets.

The maximum length of a packet is 1400 bytes and does not include UDP/IP protocol fields.

Each message is enriched with a "Frame" field followed by a SBE header. The "Frame" field contains the length of the message including the length of the "Frame" and "SBE header" fields. The following diagram shows the structure of a packet:

Client applications should check that the length of the Market Data Packet (indicated in the UDP datagram) matches **16 bytes (Packet Header size) + \sum message size (indicated in the Frame field)**. If the length of the packet doesn't match the identified length, then the packet should be considered corrupted.

A message can contain n repeating sections for a trading event, but clients should not base algorithms on repeating sections since these repeating sections can also be in n messages.

4.2 MARKET DATA PACKET HEADER

The packet header is described below:

| FIELD | DESCRIPTION | FORMAT | LENGTH | VALUES | PRESENCE |
|--|---|---------------------------|--------|--------------------------|-----------|
| Packet Time | Time when the packet is pushed to the clients (Time in number of nanoseconds since 01/01/1970 UTC). | Epoch Time in Nanoseconds | 8 | 0..2 ⁶ 4-2 | Mandatory |
| Packet Sequence Number | Each channel has its own PSN sequence. Starting from 1 at every MDG start and increasing by step of 1. In case of overflow (over 4.2 billions), Packet Flags will increase for bits 4-6. With this mechanism the PSN has 35 bits available. | Numerical ID | 4 | 0..2 ³ 2-2 | Mandatory |

| FIELD | DESCRIPTION | FORMAT | LENGTH | VALUES | PRESENCE |
|------------------------------|---|-----------|--------|---------------|-----------|
| Packet Flags | <ul style="list-style-type: none"> - Used to flag information (Little-Endian): Bit 0: Compression - 0 = body of the packet is not compressed (the body is the packet without the packet header) - 1 = body of the packet is compressed - Bit 1 to 3: will be set to 0 every morning and incremented for each restart of MDG in the same day (wrapping to 0 if the field overflows) - Bit 4 to 6: used if the Packet Sequence Number (PSN) goes over $(2^{32})-1$. They are PSN high weight bits - Bit 7: is set to 1 when in the packet there is a Start Of Snapshot (2101) message, 0 otherwise - Bit 8: is set to 1 when in the packet there is an End Of Snapshot (2102) message, 0 otherwise - Bit 9: is set to 1 when in the packet there is a Health Status (1103) message, Start Of Day (1101) message or End Of Day (1102) message, 0 otherwise Bit 10 to 15: for future use | Numerical | 2 | $0..2^{16}-2$ | Mandatory |
| Channel ID | Identifies the channel. | Numerical | 2 | $0..2^{16}-2$ | Mandatory |

Client applications should check that the length of the Market Data Packet Body matches the sum of message sizes (indicated in the Frame field). If not, then the packet has to be considered corrupted.

The Market Data Packet Body size is also the:

- UDP datagram payload size minus 16 bytes for Packet Header size
- Uncompressed body size if the packet was compressed

Note: The Packet Header will not be compressed in compressed messages.

4.3 SBE MESSAGE STRUCTURE

A Market Data message is composed of the following parts:

| SBE MESSAGE STRUCTURE | | | | | | | | |
|-----------------------|------------|---------|--------------------------|----------------------|----------------------|-----|----------------------|-----|
| Frame | SBE Header | Block | Repeating Section 1 | | | | | ... |
| | | | Repeating Section Header | Rep. Sec. 1.a | Rep. Sec. 1.b | ... | Rep. Sec. 1.n | ... |
| 2 bytes | 8 bytes | n bytes | 2 bytes | x ₁ bytes | x ₁ bytes | ... | x ₁ bytes | ... |

The maximum length of a message is 1384 bytes (maximum packet length (1400 bytes) minus the packet header length (16 bytes)).

The SBE Header is defined as follows:

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |
|--------------------------------|--|--------------|-----|----------------------|-----------|
| Block Length | Length of the block. The Block is the message without the repeating sections. | Numerical | 2 | 0..2 ¹⁶⁻² | Mandatory |
| Template ID | Identifier of the message template. This is the message type of the Market Data messages. | Numerical ID | 2 | 0..2 ¹⁶⁻² | Mandatory |
| Schema ID | Identifier of the message schema that contains the template. Used to differentiate Exchange Specifications. | Numerical ID | 2 | 0..2 ¹⁶⁻² | Mandatory |
| Schema Version | Version of the message schema in which the message is defined. Used to add messages and/or modify some others. | Numerical ID | 2 | 0..2 ¹⁶⁻² | Mandatory |

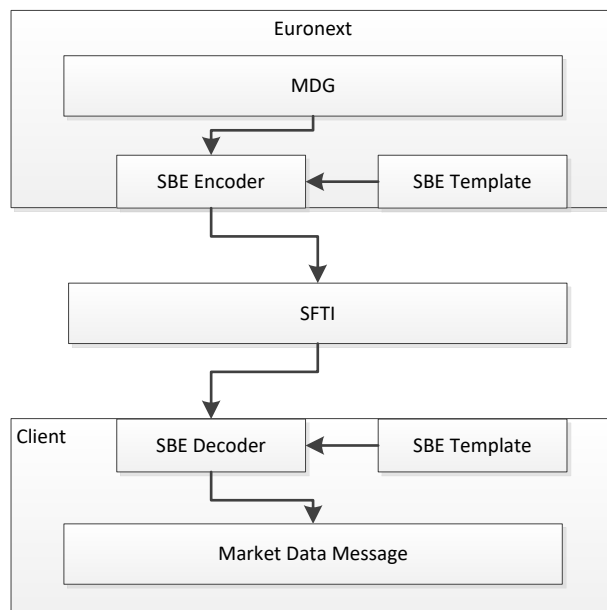

The Repeating Section Header is defined as follows:

| FIELD | DESCRIPTION | LENGTH | VALUES |
|--------------------------|---|--|------------------------|
| Repeating section header | Defines how many times the repeating section is repeated and the length in bytes of a repeating section. It is set to "0" if there is no repeating section. | 2 bytes (the first byte for the length and the second byte for the count) | From 0 to 254 for both |

A Schema ID is composed of Template IDs (or message types) and each Template ID has its own Schema version (message version).

Please note that the SBE Header and Repeated Section Header must be present on the wire for each message (SBE Repeated Section Header only for messages that have a repeated section), but for readability purpose it is not represented in the message structures in this document.

The Exchange provides SBE Template XML files that contain all message types supported by MDG. Client systems can decode SBE messages from MDG using the schema and template files as below:

4.4 SBE BACKWARD AND FORWARD COMPATIBILITY

The aim of backward and forward SBE compatibility is to allow members to choose to update to the latest SBE version or remain in previous versions.

To do so, the main element is the SBE version provided in SBE Template file. This SBE version is in the attribute: "version". In addition, each change on message, field or possible value (for enumerated or bitmap) in the SBE Template file, are flagged with attributes:

- SinceVersion for additions
- deprecated for removals

Each of the above attributes will be set with the value of the SBE version when the change occurred. As such their value cannot be greater than the SBE version.

It is crucial for members to check for each new SBE Template if the compatibility is insured and until which version in order to update if necessary.

These compatibilities are not ensured for the following situations:

- New field added wherever, except if added at the end of the block or a repeated section
- Existing field length changed
- Field, message or possible value name changed
- For enumerated field, if the value is changed (example: in field "EMM", value Not Applicable changes from 254 to 99)

The following describes the mechanism for each compatibility:

■ New field compatibility

Consider SBE version is set to 5.

If in a message a field has been added at the end of the block and before the repeated section with "sinceVersion = 5" then members that are not interested by this new field can ignore it.

To ignore it, members are using the SBE Version 4 (or lower) that has not this new field. Therefore, the block length in the SBE header does not include the field added in version 5. Then SBE Decoder when processing the new message will process all fields inside the block length in SBE version 4 and ignore the new fields in version 5 to continue processing the message with the repeated section header.

Same logic is used for field added at the end of the repeated section. The length of the repeated section is in the Repeated Section Header and it is not the same size between version 4 and 5.

- New possible value compatibility

If a new possible value is added in SBE version 5, it will be flagged with "sinceVersion = 5". Members that are not interested by this new possible value will potentially receive this new value but will have to define a specific behaviour. They can for example ignore it.

- New message compatibility

In case a new message is created and until the member wants to use it by updating the SBE version, this message will be ignored.

- Removals

The field or message or possible value will still be sent with a consistent value in order to ensure the compatibility and will be flagged with the attribute "deprecated".

Note: In case Euronext breaks the SBE compatibility, client will be made aware in timely manner.

For the more in depth detailed explanation of Euronext implementation of the SBE protocol, clients are invited to refer to the dedicated Optiq Notice : [SBE Template Introduction and Compatibility Rules](#)

5. MESSAGE OVERVIEW

5.1 TECHNICAL FORMAT FIELDS

The field formats contained in the messages will adhere to these rules:

- Binary data is in Intel byte order (Little-Endian).
- All integers are unsigned numeric or signed binary using two's complement method.
- All message fields are sent for every message. Only the field values will be broadcast (field names in this document are only for reference purpose).
- All field sizes are fixed and constant.
- Segmentation of messages across packets is not supported, so a message will never straddle a packet boundary.
- Even if it is not always mandatory to be able to process last message version (Schema Version), it is mandatory to check each update for important or regulatory updates.

NULL VALUES

- SBE allows optional fields with a null value. The applicable NULL value is defined in the SBE Template file. In message and field specifications, only the not null values are indicated in the "Values" column.
- All text fields (Text and Alphanumerical Id that have more than 1 character) have a specific null value that is not defined in the SBE Template. This null value is binary 0 (/0) for each character.
- All "Alphanumerical ID" and "Text" fields are alphanumeric based on UTF-8, left aligned and null padded (\0).

| FORMAT FIELDS | DESCRIPTION | NULL VALUE |
|-------------------|---|--|
| Alphanumerical ID | String type identifying an element, left aligned and completed with null padding (\0). | Each character is a UTF-8 null code point (\0) |
| Amount | Signed or unsigned numerical field representing the price multiplied by the quantity. See the description in Price, Quantity, Ratio And Amount Formats . | Null value defined in SBE Template |
| Bitmap | Array of bits, each bit specifying whether an optional value is present (set to "1") or not (set to "0") (in Little-Endian). E.g. For the Trade Qualifier bitmap field if its bit in position zero (0) is set to one (1) then it defines the trade as an Uncrossing Trade. At the same time bit in position one (1) can also be set to one (1) which will in this case indicates that this is also a First Traded Price. | No null value |
| Boolean | This field acts as an enumerated field with the possible values 0 (false), 1 (true) or null value. | Null value defined in SBE Template |
| Date | Date of an event (in number of days since 01/01/1970 UTC - 01/01/1970 is the day "0"). | Null value defined in SBE Template |

| FORMAT FIELDS | DESCRIPTION | NULL VALUE |
|---------------------------|---|---|
| Decimal Places | Number of decimals associated to a numerical field. See the description in Price, Quantity, Ratio And Amount Formats . | Null value defined in SBE Template |
| Enumerated | Information having a delimited set of possible values. | Null value defined in SBE Template Note: The null value here depends on the technical type which can be unsigned integer or character. |
| Epoch Time in Nanoseconds | UTC Timestamp indicating the number of nanoseconds since epoch (January the 1 st 1970). | Null value defined in SBE Template |
| Integer Time in hhmmss | UTC Timestamp using an integer to define the time as hhmmss. | Null value defined in SBE Template |
| Intraday Time in Seconds | UTC Timestamp indicating the number of seconds since the beginning of the day. | Null value defined in SBE Template |
| Numerical | Generic numerical field on unsigned integer. | Null value defined in SBE Template |
| Numerical ID | Numerical field identifying an element. | Null value defined in SBE Template |
| Price | Signed numerical field representing a price. See the description in Price, Quantity, Ratio And Amount Formats . | Null value defined in SBE Template |
| Quantity | Unsigned numerical field representing a quantity of elements (for example a number of shares). See the description in Price, Quantity, Ratio And Amount Formats . | Null value defined in SBE Template |
| Sequence | See the description in §5.3 - Sequence Numbers. | Null value defined in SBE Template |
| Signed Numerical | Generic numerical field on signed integer. | Null value defined in SBE Template |

5.2 DATE AND TIME CONVENTIONS

Times and Timestamps are expressed in UTC (Universal Time, Coordinated) and are synchronised using Precision Time Protocol (PTP). They are defined in number of nanoseconds since 01/01/1970 UTC based on Unix Epoch or number of seconds since the beginning of the day.

Phase Time and Scheduled Event Time for Cash markets are expressed in an unsigned integer 32 to define a time in hhmmss UTC. Thus, this time is in the range from 0 to 235 959. Each time 60 (seconds) is reached, it increments the hundreds by 1 and seconds are reset to 0. The same applies every 60 minutes (or for each increment of a second when we have 59

minutes and 59 seconds), system increments the 10 thousands by 1 and reset all the inferior figures to 0.

Example: if we have 25959 (2h 59m 59s), the next second will be 30000 (3h 0m 0s).

Dates are defined in number of days since 01/01/1970 UTC (01/01/1970 is the day "0").

Dates and Times formatted for ESMA reporting (EU MiFID II and onshored UK Regulation) are defined with a 27 bytes character string following ISO 8601:

YYYY-MM-DDThh:mm:ss.dddddZ.

Where:

- "YYYY" is the year.
- "MM" is the month.
- "DD" is the day.
- "T" is a constant letter used as a separator between "YYYY-MM-DD" and "hh:mm:ss.dddddZ".
- "hh" is the hour.
- "mm" is the minute.
- "ss.ddddd" is the second and its fraction of a second.
- "Z" is a constant letter standing for UTC time.

5.3 SEQUENCE NUMBERS

The feed contains two sequence numbers:

5.3.1 The Packet Sequence Number (PSN)

The Packet Sequence Number (PSN) is part of the packet header and should be used for UDP gap detection and packet ordering. Each channel has its own PSN sequence.

5.3.2 The Market Data Sequence Number

Aggregators are MDG internal components that are dealing with a set of channels. The Market Data Sequence Numbers are managed at the aggregator level. Each one of them has its own sequence, starting from 0 and incrementing by step of 1 along the day. Since clients may listen to only a subset of the channels managed by one aggregator, they will not see all the Market Data Sequence Numbers in the messages they get from the channels they listen to. Therefore, on one channel the Market Data Sequence Numbers will increment all along the day but not necessarily by step of 1.

The behaviour of the Market Data Sequence Numbers for the following messages is different. Please refer to their message definition for further explanations:

- **Start Of Day** (1101)
- **End Of Day** (1102)
- **Health Status** (1103)

Reminder: For gap detection: please use the Packet Sequence Number (PSN).

5.4 PRICE, QUANTITY, RATIO AND AMOUNT FORMATS

All prices must be processed with two values: the price value in an integer and its scale code. Each instrument must be linked to the associated [Price / Index Level Decimals](#) from the Standing Data message or file.

Prices must be calculated according to the following formula:

$$\text{Price} = \frac{\text{Integer}}{10^{\text{Price/Index Level Decimals}}}$$

For example, a price of 27.56 can be represented by an Integer of 275600 and a Price / Index Level Decimals of 4.

Only 2 prices are not using the generic field above: "Issue Price" and "Strike Price". Since these fields have decimals computed instrument per instrument, they have a dedicated decimal location field that are respectively: "[Issue Price Decimals](#)" and "[Strike Price Decimals](#)".

Note 1: The same mechanism is used for:

- All quantities that are calculated with Quantity Decimals⁴
- All ratios and percentages with Ratio / Multiplier Decimals
- All amounts with Amount Decimals

Note 2: Prices, quantities and amounts for EU and UK MiFIDII do not follow this [Price / Index Level Decimals](#) behaviour. The complete format is described in the Field Description.

5.5 TRADING DAY SCHEDULE: TIMETABLE MECHANISM

A trading day (or business day) is a day when the Exchange is open and allows buying and selling financial instruments. A trading day cannot span several calendar days. Typical trading days are Monday through Friday. Non-trading days are the weekends and some holidays.

5.5.1 Trading Cycle

During the trading day, financial instruments are traded following a trading cycle, which is the sequencing of market transitions (up to 30) and market events scheduled at precise times within a defined duration.

■ Market transition

A market transition is the triggering of a new Market Phase. Market phases that can be scheduled in a trading cycle are the following:

- 'Inaccessible': no access to the market, typically at the beginning of a trading day and between two trading days; Equivalent to a 'down' status of the trading chain;
- 'Closed': the market is fully available for Market Operations, who can perform consistency checks and other operations; Market participants can modify and cancel their orders (no order creation) on Derivative markets and cancel only on Cash markets;

⁴ Please see exceptions for fields like Leg Ratio

- ‘Call’: the market is available to market participants and orders are collected without matching; some information is broadcast, such as the best bid/offer prices (BBO), the Indicative Matching Price (IMP);
- ‘Uncrossing’: the matching engine applies an uncrossing algorithm where crossed orders (i.e. bid orders with prices higher than offer orders) are matched;
- ‘Continuous’: entering orders are matched as soon as a counterpart can be found.
 - Market Events

Market Events provide specific information to market participants, such as the expiry time of an instrument.

There are two types of market events:

- Market events explicitly configured within the trading cycle pattern;
- Market events triggered by Market Operations or the trading engine itself (out of scope).
 - Link between a product and its Trading Cycle

Each product (respectively a cash instrument or a derivative contract) is linked to a Trading Cycle indicating the sequence of market transitions and market events. The Trading Cycles are identified by a field provided in referential data: Pattern Identifier. It is available either in on the feed through respectively Standing Data (1007) and Contract Standing Data (1013) message, or on CFTS through Standing Data files. The timetables themselves are provided in a dedicated CFTS file - Timetable File (1006).

5.5.2 Broadcast Information

- Start of trading day

At the beginning of the Trading Day and before traders start sending any orders, the Matching Engine generates and broadcasts:

- A “Timetable” message for each trading cycle pattern indicating for each pattern ID the sequence of market phase transitions and market events to be triggered for the coming trading day;
- A “Market Status Change” message for each Contract/Instrument which was in a Suspended status or whose order entry rejection flag is set to “0” (Order entry, modification and cancellation forbidden) to indicate to Market Participants that the Instrument cannot be traded.

- Throughout the trading day

Throughout the trading day, the Matching Engine generates:

- A “Timetable” message each time Market Operations modify the trading cycle of a contract;
- A “Market Status Change” message at the time of the transition for a derivatives contract from one market phase into another one;
- A “Market Status Change” message at the time of the transition for a derivatives instrument from one status into another one (in case the Derivatives instrument does not follow anymore the contract phase)
- A “Market Status Change” message at the time of the transition for a cash instrument from one status into another one.
- A “Market Status Change” message whenever market events are scheduled, triggered or cancelled.

5.6 INSTRUMENT TICKS

- Link between a product and its Tick Table: :

Each product (respectively a cash instrument or a derivative contract) is linked to a Tick table indicating for each price range the ticket applied in Optiq. The tick tables are identified by a field provided in referential data: Tick Size Identifier. It is available either in the feed through respectively Standing Data (1007) and Contract Standing Data (1013) messages, or on EFS through Standing Data files. The tables themselves are provided in dedicated EFS files (respectively Cash Tick Size Referential File and Derivatives Tick Size Referential File).

Note: Settlement Tick Sizes and Exchange Delivery Settlement Prices Tick Sizes are still provided independently from the tick size in derivatives referential data, as indication of the parameters used for the computations of the settlements.

5.7 INSTRUMENT IDENTIFIERS

An instrument is identified by its Symbol Index, ISIN and/or the AMR (for the Derivatives) for all Optiq messages.

while it is identified by its MiFID Instrument Id for Approved Publication Arrangement (APA) MDG messages (EU and UK MiFID II Regulatory publication Tool)

5.7.1 Symbol Index

The Symbol Index is assigned by the exchange and will not change over the lifetime of the instrument, nor used again after instrument expiration.

Any Corporate Action leading to a change of ISIN will lead to change of Symbol Index. These Corporate Actions are generally part of the mandatory reorganisation events; the most frequent ones being stock split, reverse stock split, change of name / denomination. However the ISIN change is not systematic and will be in any case communicated upfront through the Euronext Corporate Action notices.

The standard security identifier (for example ISIN), mnemonic, tick size, instrument name and other instrument characteristics are carried only in the Standing Data (1007 message), Outright Standing Data (1014), Strategy Standing Data (1012), Contract Standing Data (1013) messages and in the Standing Data files on servers. As such, the client applications must link the Symbol Index which is sent in all messages, with other instrument characteristics present in the Standing Data messages or files.

5.7.2 Automated Market Reference (AMR)

The AMR Code remains in the referential data for the Derivatives to allow clients to map it to the Symbol Index used in trading in Optiq. The AMR Code is built from the following template and only applicable for Derivatives:

| Instrument attribute | Description | Attribute length (char) | Example |
|--|---|-------------------------|--|
| Exchange code | Code used to identify the Market Place upon which the product is listed | 1 | P - Paris Equity J - Paris Index |
| Contract Type | Code to identify the type of contract | 1 | F- Futures O - Options |
| Contract Code | Code assigned to identify the contract | 4 | FCE - CAC40 Index TO1 - Total SA 1FIB - ITA Index Future FIB |
| Expiry | Expiry year and month Format for all contracts: YYYY - "YY" is the last number of the year - "MM" is the month | 4 | 230421 - 2023, 21 st April Expiry = 2304 |
| Expiry Day code | Expiry day to be encoded : - Days from 1 to 9 : number 1 to 9 - Days from 10 to 31 : letters in alphabetic order : A, B, ..., V | 1 | 230421 - 2023, 21 st April Expiry Day code = L |
| Strike Price number of decimals | '1' - '4': Strike price number of decimals '0': Future instrument (strike price not applicable) 'S': Special AMR used for instrument with strike price decimals > 4 | 1 | 1 2 3 4 0 S |
| Strike Price | Strike price of the option. -For Strike Price greater or equal to 10000, the first char represents a multiple of 10000 (10 = A, 11 = B,..., 35 = Z), the last 4 chars are the price modulo 10000 left padded with '0' -For Special AMR (Strike Price number of decimals = 'S'), Strike Price is converted in base 36, left padded with 0. | 5 | |
| Instrument Type | Code to identify type of Derivative Instrument | 1 | F - Futures C - Call P - Put |

Examples:

| Instrument description | Strike Price Denominator | AMR code |
|--|--------------------------|---------------------------|
| ITA Index Future FIB – 2023, March 17th - Milan Index | N/A | IF1FIB2303H000000F |

| | | |
|---|--|--------------------|
| TOTAL Call Option – 2025, April 18th - Strike 43€ - Paris Equity | 100 – So Strike Price number of decimals is 2 | POT01 25041204300C |
|---|--|--------------------|

The AMR code of a strategy has a different composition and is built from the following template:

| Strategy Attributes | Description | Attribute Length (char) |
|------------------------|--|-------------------------|
| Exchange Code | Code used to identify the market place upon which the product is listed | 1 |
| Contract Type | Code to identify the type of contract | 1 |
| Contract Code | Code assigned to identify the contract | 4 |
| LegNumber | Number of legs of the strategy. Leg number to be encoded : - Legs from 1 to 9 : number 1 to 9 - Legs from 10 to 31 : letters in alphabetic order : A, B, ..., W | 1 |
| StrategyCode | Code used to identify the type of the strategy | 1 |
| Filler | Value of the filler is '0000' | 4 |
| StrategyCreationNumber | Corresponds to the last 5 numbers of the symbol index | 5 |
| StrategyIdentifier | Value is 'S' to identify the strategy | 1 |

5.7.3 MiFID Instrument ID

Field "MiFID Instrument Id" is used as unique instrument identifier for APA messages.

It has to be used with field "MiFID Instrument Id Type" which indicates if the identifier provided in "MiFID Instrument Id" is an 'ISIN' or another identifier (value 'OTHR').

The referential has to be used by clients to match the ISIN or OTHR instrument identifier with instrument characteristics to uniquely identify this instrument.

6. HOW TO ...

6.1 ... PROCESS CANCELLATIONS

6.1.1 Trade Cancellation

The trade will be cancelled with all the details of the trade in:

- **Market Update** (1001) message with *Market Data Update* Type "50 - Trade Cancellation". It will not be possible from this message to make the link with the original trade.
- **Full Trade Information** (1004) with *Trade Type* "24 - Trade Cancellation" and *MMT Modification Indicator* "CANC - Trade Cancellation". All other fields will be set with original trade details including the *MiFID Execution ID* field which allows client to easily identify the trade cancelled for this Symbol Index.

Note: In case of MDG for APA, the *MiFID Execution ID* becomes irrelevant. Identification of a trade cancelled is done by using the *MiFID Transaction ID* field.

6.1.2 Quote Cancellation

The behaviour is the same as Trade Cancellation. *APA Quotes (1026) - Deprecated*

6.1.3 Order Cancellation with Order Update message

For an order deletion an Order Update (1002) message is sent with a Market Data Action type set to "2 - Deletion of order identified by Previous Priority" with the Previous Priority set to identify the order to remove from the book. Price and Order Priority will be set to the null value and quantity set to '0'. Order side and order type will be populated according to the deleted order.

6.1.4 Limit Cancellation with Market Update message

In the Market Update message, if there is no more volume for a given price, the limit will be updated with an "Updated Bid" or "Updated Ask" with the quantity set to '0'.

If the BBO has no more volume, then it will be updated with a "Best Bid" or "Best Offer" with quantity set to '0'. If the book side is empty, the BBO will be sent with Price set to null according to the SBE protocol and quantity '0'. It will be followed by a limit update with the price of the limit to update and quantity set to '0'.

6.2 *APA FULL TRADE INFORMATION (1028) - DEPRECATED... DETERMINE THE MESSAGE TYPE*

Each message has a type that uniquely defines its structure and its content, and is represented by a numeric identifier.

First example, the message "Market Update" has the type "1001". In the SBE message header the "Template ID" field contains this type (see [SBE Message Structure](#)).

6.3 ... DETERMINE THE NUMBER OF REPEATING SECTIONS IN A MESSAGE

The number of repeating sections is defined in the second byte of the "Repeating Section Header" (see [SBE Message Structure](#)).

6.4 ... DETERMINE THE LENGTH OF A PACKET

The length of the packet is set in the UDP header. It includes the UDP header length.

6.5 ... DETERMINE THE LENGTH OF A MESSAGE

The length of a message (including the length of the "Frame" and "SBE header" fields) is in the field "Frame" (see [4.1 - Overview](#)).

6.6 ... MANAGE A NEW VERSION OF A MESSAGE IF THE CLIENT HAS NOT IMPLEMENTED THE NEW FIELDS

Please refer to the explanations in the paragraph [SBE Backward and Forward Compatibility](#).

6.7 ... LOOK FOR A TRADE

This is possible by checking in Full Trade Information (1004) message the MiFID Execution ID field. It is the association of Symbol Index, EMM and Execution ID completed with null on the right to complete until the 52 bytes of the field are filled.

6.8 ... LOOK FOR AN ORDER

For a given Symbol Index and EMM, the order can be found using its Order Priority that uniquely identifies an order. This value is given in the "Ack" message sent by Order Entry Gateway (OEG).

Since updated orders might have a loss of priority, members have to use *Previous Priority* field to find the order in the book. Previous Priority, when set, has to be matched with Order Priority in the existing orders.

6.9 ... RESYNCHRONIZE WITH SNAPSHOT AFTER PACKET LOSS

Please refer to the explanations on the Snapshot: [Snapshots](#).

6.10 ... MANAGE BBO

Best Bid and Offer (BBO) updates are sent with a price and a quantity to indicate the best limit on bid or offer side. When the Best Bid or Best Offer changes, a new Best Bid or Best Offer update is sent out and replaces the previous sent Best Bid or Best Offer. If a side of the book becomes empty, then a Best Bid or Best Offer is sent with quantity set to 0 and price set to null to clear the Best Bid or Best offer.

6.11 ... DERIVE IMPLIED PRICES VOLUME FROM THE AGGREGATED BBO

Implied price volumes are included in the Market data messages communicated for the associated price level. As implied are not considered as orders the associated Implied prices are displayed on the market only if they contribute to the Best Limit.

When an implied price contributes to a limit, the volume available on the market at that price increases without incrementing the number of orders. This logic allows client to distinguish volumes of implied prices vs. those of explicit orders. As such it is possible to have a Best Limit displayed with price and volume but with a number of orders equal to zero (when relying exclusively on implied prices).

Implied prices and volume are only provided at BBO in the messages with Market Update Type (1) and (2). The limit Market Update Type only include explicit volume.

6.12 ... BUILD THE BOOK

Optiq Market Data provides market by limits (with Market Update (1001) messages) or by orders (with Order Update (1002) messages) depending on the instrument type.

- For markets built using aggregated limits (**Market Update** (1001)), clients have to order the limits by prices (only one price by line):
 - On a new bid or ask, clients must add the new limit
 - On an updated bid or ask, clients must update the current limit with the new limit. This update can be on the limit: type, quantity or number of orders.
 - On a limit deletion, clients will receive an update with quantity set to '0' and the price matching the limit to delete.
- For markets built using **Order Updates** (1002), clients have to arrange each order by its Order Priority (The order with the lowest value of Order Priority has the highest priority):
 - On a New Order, clients must add the new order identified by its Order Priority
 - On an order modification with loss of priority, clients must remove the order identified by the Previous Priority and add a new order identified by its Order Priority.
 - On an order modification without loss of priority, clients must update the order identified by its Order Priority.
 - On an order cancelation, clients must remove the order identified by its Previous Priority.

Clients should not process both the BBO and limits to construct the book. If Best Bid and Offer updates are sent as a part of the same message, then they should be processed as one update to the BBO and not individually. Otherwise, the order book might appear crossed.

6.13 ... DETERMINE A CLOSING PRICE

Closing Price is determined depending on the Closing Price Type defined at the instrument level, this setting is defined by the Exchange and shared with members through the

CashStandingDataFile (9007);

- ◆ Triggering of the computation of the closing price is broadcasted to the market through the **Market Status Change** (1005) message with a dedicated *Scheduled Event* value '16' (Closing Price);
- ◆ Closing Price value is communicated through the **Price Update** (1003) message and flagged by a dedicated *Market Data Price Type* '33' (Closing Price);
- ◆ On top of the Market Data Price Type, members must also use the new *Price Qualifier* field to determine the exact source of the closing price value broadcasted in the *Price* field.

Example: if a given instrument has the *Closing Price Type* set to '1' (Last Traded Price) but there were no trades for that instrument during that trading day, then the closing price is set to the Last Adjusted Closing Price value. In this case, the **Price Update** (1003) message is sent with *Price* field set to "LACP" value, *Market Data Price Type* field set to '33' (Closing Price) and the *Price Qualifier* field set to '1' (Last Adjusted Closing Price);

6.14 ... DETERMINE THE OPTION UNDERLYING EXPIRY

If the Underlying Type is an Index or a Commodity (F or C), the field *Underlying ISIN Code* is populated at contract level. Additionally, underlying Expiry at Contract Level is set to null. The actual alternate underlying is populated at outright level:

- Index future expiry the underlying is an index
- Commodity future expiry the underlying is a commodity

AMR and SymbolIndex of the future expiry is provided at the outright level. This will allow customers to look-up the AMR to find the underlying future expiry.

6.15 ... DETERMINE ROUND LOT WITH QUANTITY NOTATION

In order to determine the Round Lot, clients have to consider field *Quantity Notation* as follow:

- If Quantity Notation is equal to 'UNT' then Round Lot equals Lot Size.
- If Quantity Notation is equal to 'FMT' then Round Lot equals Par value
- If Quantity Notation is equal to '-' then Round Lot equals 1.

It is important for Par Value to apply the decimal field associated.

6.16 ...USE AN EXECUTION SUMMARY MESSAGE

Execution Summary is a mechanism made available for Cash (Warrants and Block excluded) and Derivatives segments to provide a quick and efficient way for clients to make decisions on remaining state of the order book after an aggressive order execution.

Execution Summary is published in MDG using the **Market Update** (1001) messages, indicating the Total executed quantity (no matter how many price levels the aggressive order has executed against), and the Last (or deepest into the book) price that the aggressive order has executed against.

The sequencing of this broadcasting is the following:

- Execution summary:
 - Last price hit by the aggressive order
 - Total executed quantity
- Trades
- BBO
- Full depth of the book

Execution Summary is indicated using two Market Data Update Type values:

- '90' – Bid Execution Summary
- '97' – Offer Execution Summary

As the Execution Summary is always sent first following execution of a Trade upon reception of this message clients can anticipate the upcoming limit update on the resting side of the execution.

Technically, Execution Summary is sent as soon as possible, i.e. the market data packet is sent immediately once the event received.

6.17 ...DETERMINE THE STATISTICS ON AND OFF-BOOK FOR AN INSTRUMENTS (COB, WHOLESALERS & RFC)

Optiq Provides daily aggregated volume to the market through the dedicated **Statistics** (1009) messages. This section aims to describe how to reconcile the provided statistics with the trade published on Market Data through the **Full Trade Information** (1004) or **Market update** (1001) message.

- On Exchange On Book Update Type

This Statistic is the aggregated volume executed on-book. It is computed on a per instrument symbol index basis and is equal to the sum of all trades disseminated on the Central Order Book during the day through both **Full Trade Information** (1004) and **Market Update** (1001) messages.

- On Exchange Off Book Update Type

This statistic is the aggregated volume executed off-book. It is computed on a per Instrument level and is equal to the sum of all trades executed through either the Wholesale or the RFC facility during the day.

Trades in case of Wholesales (Against Actual, Exchange for Swap or Large in Scale transaction) are published via **Full Trade Information** (1004) message only – not via **Market Update** (1001).

It is equal to the sum of:

- The RFC trades (dedicated trade type) disseminated following an RFC through both **Full Trade Information** (1004) or **Market Update** (1001) messages

- The LIS, AA and EFS Trade volume disseminated through **Full Trade Information** (1004) messages
- The residual volume of a LIS Package Trade wholesale transaction to which this instrument contributes, disseminated through either the *Leg Last Traded Quantity* field in the **LIS Package Structure** (1016) or either computed by using the **Full Trade Information** (1004) – sent at contract level and indicating the Instrument Symbol Index in the dedicated repeating group.

This residual volume is computed as follows: volume of the wholesale transaction multiplied by leg weight as identified by the strategy definition in the related **LIS Package Trade** (1016) message

- $Residual\ Volume(i) = TransactionVolume \times Leg\ Ratio(i), i\ representing\ the\ symbol\ index$

Example: in case of a LIS on a Butterfly on the CAC40 Option contract, with 3 options A, B and C,

where $B = A - 2B + C$ (*), with a volume of 125 lots:

- SymbolIndex of Full Trade Information Contract
- Strategy Code of the Butterfly
- Volume executed: 125
- SymbolIndex of A, B and C instruments

The residual volume on each instrument is then equal respectively for A, B and C to 125, 250 and 125 resulting from strategy volume X leg ration, where each leg ration is defined by (*).

The weights of each component are provided to the market via the dedicated **LIS Package Structure** (1016) message.

As a consequence, the **Statistics** (1009) message are published immediately after the CAC40 Option **Full Trade Information** (1004) message disseminated for the LIS transaction, increasing accordingly the aggregated volumes.

- On and Off-book On Exchange Update Type

This statistic is the aggregation of the two previous ones.

6.18 ...DETERMINE THE TVTIC

The Trading Venue Transaction Identification Code (TVTIC) is the unique identifier of a trade in the EU and UK MiFID II framework. Each individual trade has a corresponding TVTIC. As a reminder, MiFID II reporting is at leg level.

The different ways to get a trade TVTIC are:

For Cash / Outright trades:

- ◆ Using the public Market Data feed, getting the *Trade Unique Identifier* in the **Full Trade Information** (1004) message;
- ◆ Using the private Order Entry feed:
 - In SBE **Fill** (04) or SBE **Declaration Notice** (42): getting the *Trade Unique Identifier*;

- In FIX **ExecutionReport** (8) or FIX **TradeCaptureReportAck** (AR) : getting the *Regulatory Trade ID* with *Regulatory Trade ID Type* equals 5 (TVTIC);
- ◆ Retrieving the *TVTIC* field from the EOD Day Trade file (**FTRRM**).

For Strategies:

- ◆ Using the private Order Entry feed:
 - In SBE **Fill** (04): getting the *Trade Unique Identifier* in Strategy fields section to get the “Leg” Trade Unique Identifier;
 - In FIX **ExecutionReport** (8): getting the *Regulatory Trade ID* with *Regulatory Trade ID Type* equals 5 (TVTIC) where *RegulatoryLegRefID* equals the corresponding *Leg ID* in NoLegs section.

7. MESSAGES

7.1 TECHNICAL MESSAGES

The message specification format is as follow:

| FIELD | DESCRIPTION | LENGTH |
|--------------------------|---|--|
| Block | The block is all the non-repeated fields. | Variable (in bytes) |
| Repeating section header | This is how many times the repeating section is repeated and the length of a repeating section. It will not be displayed in any below message. It is set to 0 if there is no repeating section. | 2 bytes (1byte for the length 1byte for the count) |
| Repeating section | All the fields that are repeated. All these fields are in bold and green table borders | Variable (in bytes) |

All field lengths are in bytes.

Field definition might not be exhaustive, please go to the [Field Description](#) section. Further details will be provided.

7.1.1 Start Of Day (1101)

These messages will be sent periodically until another MDG message is sent on any channel of an aggregator. After the Start of Day messages, the Health Status (1103) messages will be sent periodically

This mechanism guarantees that Start Of Day (1101) messages are the really first messages sent by MDG.

Message Sending Rules: Start Of Day (1101) messages are sent every 2 seconds on each channel once the Market Data Gateway starts.

Note: Start Of Day Market Data Sequence Number will always be set to "0".

| FIELD | SHORT DESCRIPTION | FORMAT | LE N | VALUES | PRESENC E |
|---|--|----------|------|-----------------------|------------|
| Market Data Sequence Number | Assigned by MDG for each message. Each channel has its own Market Data Sequence Number sequence. | Sequence | 8 | 0..2 ⁶⁴ -2 | Mandator y |
| Session Trading Day | Date of the current trading session (in number of days since the 1st of January 1970). | Date | 2 | 0..2 ¹⁶ -2 | Mandator y |

7.1.2 End Of Day (1102)

End Of Day (1102) messages are sent at end of day to inform that MDG will shut down 15 minutes after the first End Of Day (1102) message is sent. During these 15 minutes, MDG will stop sending messages (including Health Status (1103)).

Message Sending Rules: At the end of day, based on the production timetable, MDG will send **End Of Day** (1102) messages every 2 seconds during 15 minutes.

Note: The Market Data Sequence Number of all the **End Of Day** (1102) messages is the Market Data Sequence Number of the last message sent by the aggregator for this set of channels (be aware that this last message can have been sent on another channel managed by this aggregator).

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |
|---|--|----------|-----|-----------------------|-----------|
| Market Data Sequence Number | Assigned by MDG for each message. Each channel has its own Market Data Sequence Number sequence. | Sequence | 8 | 0..2 ⁶⁴ -2 | Mandatory |
| Session Trading Day | Date of the current trading session (in number of days since the 1st of January 1970). | Date | 2 | 0..2 ¹⁶ -2 | Mandatory |

7.1.3 Health Status (1103)

The Health Status messages are broadcasted on all channels repeatedly all along the day as soon as the Standing Data messages are broadcasted and until End of Day messages are broadcasted. The Market Data Sequence Number for this message will be the last Market Data Sequence Number of the message sent by the aggregator of this channel (be aware that this message can be sent on another channel managed by this aggregator).

The Event time indicates the time of the generation of the Health Status message. This message is alone in the packet.

Message Sending Rules: Health Status are sent every 2 seconds even if there are market data messages sent on a channel.

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |
|---|--|---------------------------|-----|-----------------------|-----------|
| Market Data Sequence Number | Assigned by MDG for each message. Each channel has its own Market Data Sequence Number sequence. | Sequence | 8 | 0..2 ⁶⁴ -2 | Mandatory |

7.1.4 Technical Notification (1106)

Technical Notification message is used to notify the beginning of Start and End Retransmissions.

Message Sending Rules:

- At the end of each book retransmission on a single instrument (they start with a clear book request in Order Update or Market Update message). Field *Symbol Index* will have the value of the instrument book sent. *Retransmission Start Time* will be set to null.
- At the beginning and at the end of a trade retransmission, providing the time window to clear previous trades and to be replaced by the resubmitted trades. Field *Symbol Index* will be set to null.

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |
|---|--|---------------------------|-----|--|-----------|
| Market Data Sequence Number | Assigned by MDG for each message. Each channel has its own Market Data Sequence Number sequence. | Sequence | 8 | 0..2 ⁶⁴ -2 | Optional |

7.2 REFERENTIAL MESSAGES

7.2.1 Timetable (1006)

The Timetable (1006) message indicates the instrument trading patterns (state change sequence) for the current trading day.

Link between respectively Cash instruments and Derivatives contracts is explained in the dedicated section.

Message Sending Rules:

- Automatically for each Trading Pattern, after the Session Start and Referential messages
- On an exceptional basis, it may be sent during the trading day in case scheduled hours have changed due to manual intervention by Market Operations or if there are multiple openings during the day. If it indicates a Pattern ID, then the change applies on all instruments linked to this Pattern ID, otherwise it only applies on the Symbol Index and EMM.

7.2.2 Standing Data (1007)

The Standing Data (1007) message provides instrument characteristics for Cash and Index products, valid for the current trading day.

Message Sending Rules:

- Every morning following the Session Start messages.

Multi-Listing – Market of Reference – Single Order Book

An instrument can be listed on more than one of the market places operated by the Exchange. Multi-Listed instruments can be identified in the feed by using the field *MIC List* in the Standing Data (1007) message.

If an instrument is multi-listed, then a Market of Reference (MoR) is designated and Euronext's European Single Order Book will consolidate liquidity in such instruments by ensuring that all order flow in that instrument is concentrated on a single order book in the designated MoR. Companies can decide to be multi-listed on more than one Euronext market to benefit from increased visibility and exposure.

For example, ING Groep (NL0011821202) (headquartered in the Netherlands) is listed on two Euronext markets, Euronext Amsterdam (being its Market of Reference) and Euronext Brussels. Even though order flow in ING Groep is concentrated on the single order book in the designated Market of Reference (being Euronext Amsterdam), ING Groep is still considered as a listed company in the Netherlands and Belgium.

The MIC List will show an instrument being listed on more than one of Euronext's markets and it always begins with the MIC of the MoR.

The Euronext website should be used as the reference for correct display of multi-listed instruments; the display of a multi-listed instrument should include the relevant markets on which the instrument is listed and show the real-time quotes of the relevant instrument (based on the single order book in the designated Market of Reference).

Notes:

- Standing Data messages are also available in XML file.
- The repeating section links the "Exchange Market Mechanism" (EMM) with its "Pattern ID".

7.2.3 Contract Standing Data (1013)

The Contract Standing Data (1013) message provides the characteristics of Derivatives contracts and the underlyings. Contract Standing Data will be sent first, followed by the Outright Standing Data and Strategy Standing Data.

For Contract characteristics: *Symbol Index* will be included in the range defined in the Symbol Index chapter

For Underlying characteristics: *Symbol Index* will be populated with the Symbol Index from the underlying cash instrument (applicable for underlying instruments listed on Euronext).

Message Sending Rules: The **Contract Standing Data** (1013) message is sent every morning following the Session Start messages

Note: Parameters related to Contract Standing Data will only be available in XML file.

| Collar Unhalt Delay | Delay (in seconds) of automatic unhalt if collar logic enables unhalting. | Time | 4 | 0..2 ³²⁻² | Optional |

7.2.4 Outright Standing Data (1014)

The Outright Standing Data (1014) message provides characteristics of Derivatives instruments, valid for the current trading day.

Message Sending Rules:

- Every morning following the Session Start messages. **Contract Standing Data** (1013) will be sent first, followed by the **Outright Standing Data** (1014) and **Strategy Standing Data** (1012).
- During the day, following intraday creation of instruments.

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |
|---|--|--------------|-----|----------------------|-----------|
| Market Data Sequence Number | Assigned by MDG for each message. Each channel has its own Market Data Sequence Number sequence. | Sequence | 8 | 0..2 ⁶⁴⁻² | Mandatory |
| Rebroadcast Indicator | Indicates if this message is resent or new (1 if resent, 0 otherwise). For a snapshot, this field will always be set to '1'. | Numerical ID | 1 | 0..2 ⁸⁻² | Mandatory |
| Symbol Index | Exchange identification code of the instrument/contract. | Numerical ID | 4 | 0..2 ³²⁻² | Mandatory |
| Contract Symbol Index | Identifies the contract of this instrument by its Symbol Index. | Numerical ID | 4 | 0..2 ³²⁻² | Mandatory |

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |

7.3 APPLICATION MESSAGES

7.3.1 Market Update (1001)

The Market Update Message provides valuable data to the market in order to build the limits for the order book depth (COB and BoB), publish trade prices and collars:

- Best limits (BBO)

- Full depth limits
- Clear Book
- Short trade
- Requests
- Collars
- Request For Cross (RFC)
- Best of Book (BoB) full depth limits
- Execution Summary

Message Sending Rules:

- For Cash and Derivatives:
 - For the book retransmission every morning or in case of HA.
 - For new or updated price and/or volume in the book (including BBO).
 - For a Request for Quote (RFQ).
 - As a short trade message indicating its trade type, traded price and traded quantity.
 - As an execution summary indicating the total traded quantity and the deepest price reached by the aggressive order.
- For Cash:
 - For new or updated BoB depth of book price and/or volume.
 - For new or updated With Liquidity Provider depth of book price and/or volume for warrants.
 - For new Collars when the update is caused by a new trade which impact collar.
- For Derivatives:
 - For a Request for Cross activation on an instrument.

Limits (BBO and Full Depth):

The *Market Data Update Type* field indicates the type of price/volume update as follows:

- The Best Bid/Offer are the best explicit buy or sell limit price and aggregated volume (explicit and implied) at the best limit price. When best orders are Market Orders or Market To Limit orders, the Best Bid/Offer is sent out with a price set to null and a quantity equal to the aggregated volume of Market Order (MO) and Market To Limit (MTL).
- A Market Order is sent in Market Data with a price set to null value and the quantity is the one from the client order.
- When there is no more Limit on a book side, last BBO is sent with quantity set to '0' and Price set to null value.
- The Bid/Offer updates are the explicit buy or sell price and aggregated explicit volume at any price level. When the Bid/Offer is the best price, both the Bid/Offer and the Best Bid/Offer will be sent. Implied volume is not taken into account in the Bid/Offer updates.
- On Warrants, all updates with a "Liquidity Provider" flag, with a limit will contain at least one liquidity provider order. "Liquidity Provider" limits contain one or several liquidity provider orders along with zero to several non-liquidity provider orders.

Requests:

- On ETF/MTF, Request For Quotes (RFQ) have the following behaviour:
 - A RFQ request will be sent to liquidity providers in private messages. Market participants will not be informed of this RFQ.
 - If the RFQ results in a trade, and only in this case, all answers to the RFQ are sent in market data using *Market Data Update Type*: "83 = New Bid RFQ Answer" and/or "84 = New Offer RFQ Answer". The New Bid RFQ Answer and New Offer RFQ answer are aggregated price limits and show the total amount of orders at a price limit. The price limits are cleared using Updated Bid RFQ Answer and Updated Offer RFQ answer with quantity equal to 0.
- A Request for Size (RFS) notifies market participants that a member has an interest at the specified instrument price, but no quantity is indicated.

Collars:

The broadcast information regarding collars varies according to the segment to which the collar is applicable.

Collars are sent as described below.

- For dynamic collars:
 - On each book retransmission (including morning and HA book retransmission)
 - On each dynamic collar price changes
 - On action from Market Operation
- For static collars:
 - On each book retransmission (including morning and HA book retransmission)
 - On Market Operation request
 - For some instruments, on the first trade of the day

- For some instruments, at each uncrossing of the day
 - For order price control collars:
- On each book retransmission (including morning and HA book retransmission)
- On each dynamic collar price changes (if the order price control collar is following a dynamic price)
- For some instruments, on the first trade of the day (if the order price control collar is following a static price)
- For some instruments, at each uncrossing of the day (if the order price control collar is following a static price)
- On action from Market Operation
 - For LP collars:
- Only for instrument on LP Quote Driven market model and during One Side Only period to indicate opposite side virtual collar.

For more details on interaction of Optiq in cases of collar expansion associated to the Trading patterns, Spreads, triggering of FSP events, please review the Derivatives Kinematics document.

Request For Cross:

For interaction of order entry and market data messages for Request For Cross clients should review the Derivatives Kinematics document.

Clear Book:

A Clear Book requests client to clear the entire book for a given Symbol Index. Quantity will be '0' and Price set to null value.

Short trades:

Trades will also be notified using the Market Update message. This comprises a short summary of the trade information since more detailed trade information is provided on Full Trade Information (1004) message. For the specific case of Wholesales, no short trade information will be disseminated through Market Update message.

Customers that are only using short trade messages can retrieve MMT levels 1 (MMT Market Mechanism), 2 (MMT Trading Mode) and 3 (MMT Transaction Category). Rules to get this information with Market Update messages are available in appendix of this document. Please refer to both appendix sections:

- [MMT Flags Rules](#)
- [Link Between EMM and Trade Types](#)

Execution Summary:

Execution summary message provides information of the order book state after the processing of an aggressive order against orders in the order book. Execution summary messages are published with following characteristics:execution

- Number Of Orders is always set to null value
- Hidden iceberg orders quantities are included in the execution summary
- Dark Trades are not included in the execution summary
- RLP orders in case of an aggressive RLO order are included in the execution summary

- Trades with deferred publication will not generate execution summary messages
- Stop order is considered as new aggressive order and thus will generate a dedicated execution summary for the transaction
- For cash segments, execution summary messages are only published during continuous phase

For Derivatives, in case of Implied Trading, the Execution Summary is sent for the Strategy book, as well as the Outright books that participate in the execution taking into account outright orders and implied orders that have already been published.

Peg Orders (for future use):

Peg orders will be communicated on its creation and for each update with:

- Aggregated volume at this limit
- Number Of Orders with the number of peg orders

On a BBO update peg order updates will be disseminated with the BBO message in different repeated sections.

If a peg order has the same limit as other orders quantity and Number Of Reference fields will always provide aggregated limit that is containing both peg and non-peg orders.

7.3.2 Order Update (1002)

On all markets, the Order Update Message provides the market with the information needed to build the order book.

Multiple changes can be disseminated within a single Order Update (1002) message.

This message takes into account all order types, with the exception of Stop Loss, Stop Limit and Auction Volume Discovery (AVD) orders.

Stop orders are not broadcasted to market participants until they are triggered.

Order Update (1002) is not sent to the market to notify that an AVD order is submitted.

Message Sending Rules:

- In the morning, before market opening, when the trading engine is initialized, to retransmit orders remaining in the book from previous days (taking into account expired orders and order book purges). This is known as the 'order book retransmission' or 'market sheet retransmission'.
- During the day, on each new order, modify order or deletion order from a member firm.
- During the day, in case of order book retransmission. This is a failsafe in case of order book resynchronization.

Market Data Action Types

The Market Data Action Types apply for all cash instrument on central order book. Therefore, no Order Update messages are sent on derivatives.

Order Modifications

For modification of orders, the field *Market Data Action Type* will flag if there is a loss of priority or not. The order will lose its priority for:

- A price change
- An amendment with an increase of its displayed quantity

Peg Orders (for future use)

Peg orders will be communicated on its creation with its characteristics:

- Type of peg order
- Peg Offset

■ Quantity

On a BBO update no peg order update will be disseminated. Members will have then to update the peg orders for each BBO without changing the previous priority of the original order. Indeed, this will identify the order in case of a partial fill or update.

If a peg is partially filled or updated, then it loses its priority and the message will contain the new quantity.

To be noted:

- Symbol Index, EMM and Order Priority identify the rank of the order in the order book.
- Order Priority identifies the priority of the order in the order book (the order book is identified with Symbol Index and EMM).
- In case of a Deletion (Market Data Action Type '2' or '3'), the quantity will be set to '0' and the price set to default value.
- Orders for cash must be arranged according to:
 - Order type: Priority should be given first to Market order and Market to limit followed by Limits and Peg orders
 - Order price
 - Order priority
 - For Market Orders the price will be set to null value and the quantity is the one from the client order.

Client applications should do the following in order to build the market sheet:

- Determine the Market Data Action Type (add, modify, delete)
- Determine the priority of an order based on Order Type, Order Price, and the Order Priority. The priority of orders of the same type and price depends on their order priority. The order with the lowest value of Order Priority has the highest priority. Bid orders with higher prices have higher priority; ask orders with lower price have higher priority.
- Determine the price and size of an order.

7.3.3 Long Order Update (1015)

On Fixed Income markets for non-anonymous instruments, the **Long Order Update** (1015) Message provides the market with the information needed to build the order book. It completes (and does not replace) the **Order Update** (1002) message with the issuing firm information.

Multiple changes can be disseminated within a single **Long Order Update** (1015) message.

This message takes into account all order types, with the exception of Stop Loss and Stop Limit orders. Stop orders are not broadcasted to market participants until they are triggered.

Message Sending Rules

- In the morning, before market opening, when the trading engine is initialized, to retransmit orders remaining in the book from previous days (taking into account expired orders and order book purges). This is known as the 'order book retransmission' or 'market sheet retransmission'.

Order Modifications

For modification of orders, the field *Market Data Action Type* will flag if there is a loss of priority or not. The order will lose its priority for:

- A price change
- An amendment with an increase of its displayed quantity

To be noted:

- *Symbol Index*, *EMM* and *Order Priority* identify the rank of the order in the order book.
- *Order Priority* identifies the priority of the order in the order book (the order book is identified with *Symbol Index* and Request for Size).
- In case of a Deletion (*Market Data Action Type* '2' or '3'), the quantity will be set to '0' and the price set to default value.
- Orders for cash must be arranged according to:
 - Order type: Priority should be given first to Market order and Market to limit followed by Limits and Peg orders
 - Order price

* Only for TCS

For derivatives markets, all settlement prices and Indicative Uncrossing Prices for each uncrossing are provided in the Price Update (1003) message. It is sent for both past settlements (in the morning) and intraday settlements (during the trading day).

Indicative Matching Price

A Price Update message with Market Data Price Type: 14 (Indicative Matching Price) indicates the instrument theoretical opening conditions which consist of:

- The Indicative Matching Price (IMP): price at which the instrument would trade if it opened at the moment the price is calculated
- The Indicative Matching Volume (IMV): quantity that would trade at the IMP if the instrument opened at the moment the price is calculated
- The indicative imbalance volume: remaining unmatched quantity at the IMP
- The indicative imbalance volume side: side of the indicative imbalance volume
- Depending on the market, the Indicative Matching Price is sent on a fixed basis or in real time. The real-time messages are sent if at least one of the instrument's theoretical opening conditions changes (indicative matching price, indicative matching volume, imbalance volume or imbalance volume side).
- If the Indicative Matching Price remains undetermined, but the reason for this undetermined state changes, then an Indicative Matching Price is sent with null values (in field *Price*).

Quantity field will be set to null for the following Market Data Price Type:

- 13 - Subscription Price
- 23 - Valuation Price
- 27 - Last Traded Price
- 28 - Alternative Indicative Price (AIP)
- 33 - Closing Price

For Cash markets, all reference prices are published through a Price Update message, for both Central Order Book and Out of Session contexts:

- Closing Price
- Uncrossing Price
- Valuation Price
- Min/Max Out of Session Trade Price
- Net Asset value for eligible instruments

Fund features (subscription and redemption) are also communicated through a Price Update Message.

7.3.5 Full Trade Information (1004)

The **Full Trade Information** (1004) Message is a trade summary sent to the Market (EU and UK MiFID II compliant). Simultaneously, a short trade message is sent via the Market Update (1001) message for all markets, except for the specific case of Wholesale LIS Package.

Wholesale LIS Package transaction is disseminated via **LIS Package Structure** (1016) and followed by a **Full Trade information** (1004) (EU and UK MiFID II Compliant) which contains the following main fields:

- In the core part of the message, the SymbolIndex of the contract;
- In the core of the message, the executed volume of the transaction at package level;

- In the core of the message, the *MiFID Execution ID* field to retrieve the corresponding **LIS Package Structure** (1016)
- In the core of the message, *MMT Transaction Category* set to 'TPAC: Package Trade' in case of a Wholesale strategy

For the Cash Markets

MiFID Execution ID is composed of the Symbol Index (on 10 characters), the EMM (on 3 characters) and the Execution ID (on 10 characters). It is a unique Execution ID by instrument per day on the different available EMM.

Example: Trade done with Execution Id: 42 on the Symbol Index: 1384659 on EMM: 1 (COB) will have this MiFID Execution ID: 00013846590010000000042.

For the Derivatives Markets

The *MiFID Execution ID* is populated:

- In case of a COB, RFC trade or wholesale transaction on a single instrument:
Execution ID (10 char) from OEG concatenated with the instrument's identifier (ISIN code [12 char]). Example: Execution ID provided in Order Entry: 257; Instrument ISIN = ABCDEF123456; TVTIC will be 257ABCDEF123456)
- In case of a wholesale transaction or RFC trade on several instruments (Strategies):
LIS Transaction ID (10 char) from OEG concatenated with instruments identifier (Symbol Index [10 char]).
Example: LIS Transaction ID provided in Order Entry: 9012345678; Contract SymbolIndex = 1111100000; MiFID Execution ID will be 90123456781111100000).
Client should note that Wholesales LIS on Strategies are allowed only on exchange recognized strategies.

Message Sending Rules

- For each trade notification.
- For each trade retransmission.

If the Transaction Type is "Summary Report", then it will be a deferred publication of aggregated trades. Therefore, only the MiFID Notional Amount will be filled, and the high and low prices will be in the **Statistics** (1009) message.

EU and UK MiFID II flags are populated using the Market Model Typology (MMT) in version 4.0. For more information please visit: <https://www.fixtrading.org/mmt/>

With the introduction of SBE 362, the following flags are populated using the Market Model Typology (MMT) in version 5.0:

- MMT Market Mechanism
- MMT Trading Mode
- MMT Publication Mode
- MMT Benchmark Indicator
- MMT Contribution to Price
- MMT Agency Cross Trade Indicator
- MMT Algorithmic Indicator
- MMT Contingent Transaction Indicator
- MMT Negotiation Indicator
- MMT Off Book Automated Indicator

Please note that the following mappings between values sent into the MDG **Full Trade Information** (1004) message and Mifid expected values should be applied by clients once receiving the message for the Mifid compliance:

MMT Market Mechanism:

| FIELD | MIFID VALUE |
|--|-------------|
| 1 - Central Limit Order Book | "CLOB" |
| 2 - Quote Driven Market | "QDTS" |

| Num in Group for repeating section | Defines how many times the repeating section is repeated | Header | 1 | 0 | Mandatory |

7.3.6 BF Trade (1202)

The **BF Trade** (1202) message provides trade information for the ISE IBF Optiq segment.

The MMT Modification Indicator indicates whether it is a new trade, a trade amendment or a trade cancellation.

This message is sent:

- Every morning following the Session Start messages, to provide information on the last trade that occurred for this instrument.
- During the trading session, when there is a new trade for this instrument.
- During the trading session, in case of trade amendment or cancellation.

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |
|--|--|---------------------------|-----|--------------------------------|-----------|
| Market Data Sequence Number | Assigned by MDG for each message. Each channel has its own Market Data Sequence Number sequence. | Sequence | 8 | From 0 to $2^{64}-2$ | Optional |
| Rebroadcast Indicator | Indicates if this message is resent or new (1 if resent, 0 otherwise). For a snapshot, this field will always be set to '1'. | Numerical ID | 1 | From 0 to 2^8-2 | Mandatory |
| Symbol Index | Exchange identification code of the instrument/contract. | Numerical ID | 4 | From 0 to $2^{32}-2$ | Mandatory |
| MiFID Transaction ID | MiFID Transaction Identification Code is a unique reported trade identifier. | Alphanumeric ID | 52 | (See field description) | Mandatory |
| Event Time | Time when an event has been processed | Epoch Time in Nanoseconds | 8 | From 0 to $2^{64}-2$ | Mandatory |
| Bid/Offer Date Time | Bid/Offer date time , expressed as number of nanoseconds since Epoch. | Epoch Time in Nanoseconds | 8 | From 0 to $2^{64}-2$ | Optional |
| MMT Modification Indicator | Defines the modification indicator following MMT level 3.4. | Text | 4 | (See field description) | Mandatory |
| Price | Price per unit of quantity (to be calculated with the Price/Index Level Decimals). | Price | 8 | From $-2^{63}-1$ to $2^{63}-1$ | Optional |
| Bid Price | Quote bid price, (To be calculated with Price/Index Level Decimals). | Price | 8 | From $-2^{63}-1$ to $2^{63}-1$ | Optional |
| Offer Price | Quote offer price, (To be calculated with Price/Index Level Decimals). | Price | 8 | From $-2^{63}-1$ to $2^{63}-1$ | Optional |
| Quantity | Number of traded or ordered units (to be calculated with Quantity Decimals). | Quantity | 8 | From 0 to $2^{64}-2$ | Mandatory |
| MMT Agency Cross Trade Indicator | Defines the agency cross trade indicator following MMT level 3.3. | Text | 4 | (See field description) | Optional |

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |

| MiFID Price Notation | Indication as to whether the price is expressed in monetary value, in percentage or in yield. | Text | 4 | (See field description) | Optional |
| Quantity Notation | Indication of the type of measurement (e.g. number of units, nominal, monetary value, etc.) in which the transaction is expressed. | Text | 3 | (See field description) | Optional |
| Notional Amount Traded | Whole amount of the trade. | Amount | 8 | From $-2^{63}-1$ to $2^{63}-1$ | Optional |
| Trading Currency | Code of the currency (ISO 4217-3A). | Alphanumeric ID | 3 | (See field description) | Optional |

7.3.7 BF NAV (1203)

The **BF NAV** (1203) message provides Net Asset Value information for the ISE IBF Optiq segment.

The *MMT Modification Indicator* indicates whether it is a new NAV, a NAV amendment or a NAV cancellation.

This message is sent:

- Every morning following the Session Start messages, to provide information on the last NAV for this instrument.
- During the trading session, when there is a new NAV for this instrument.
- During the trading session, in case of NAV amendment or cancellation.

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |

| NAV Offer Price | Net Asset Value offer price. | Price | 8 | From $-2^{63}-1$ to $2^{63}-1$ | Optional |

7.3.8 LIS Package Structure (1016)

The **LIS Package structure** (1016) message is sent to the market to provide the structure of the package negotiated through the Optiq Wholesale facility. It allows to:

- Determine the components of the package,
- Determine which type of the Exchange Known Strategies was created to negotiate the LIS Strategy transaction (formerly package),
- Map the coming Transaction published via **Full Trade Information** (1004) message with its structure at component level,
- Automatically compute the statistics,
- Determine the price and quantity traded for each leg of a LIS package.

- Each LIS Package Structure is sent with the *MiFID Execution ID* of the transaction it relates to – allowing to associate both 1004 and 1016 messages.

Message Sending Rules

- For each LIS Package trade notification (trade types 4 and 43)
- For each LIS Package trade retransmission.

| Leg Ratio | Ratio of lots for the leg. For contingent trades, the delta. | Quantity | 4 | 0..2 ³²⁻² | Mandatory |
| Leg Last Traded Price | Indicates the price of the trade for the leg (to be calculated with the Price/Index Level Decimals). | Price | 8 | -2 ⁶³⁺¹ ..2 ⁶³⁻¹ | Optional |
| Leg Last Traded Quantity | Indicates the quantity of the trade for the leg (to be calculated with the Quantity Decimals). | Quantity | 8 | 0..2 ⁶⁴⁻² | Optional |

7.3.9 Market Status Change (1005)

The Market Status Change message provides market participants with all market events and/or market phase transitions occurring at the instrument level for cash markets, and both contract and instrument levels on derivatives markets.

The Market Status Change message informs the market of the following changes on the instrument or contract:

- Book State
- Instrument State
- Status Reason
- Phase Qualifier
- Trading Period
- Trading Side
- Order Entry Qualifier
- Session
- Price Limits
- Scheduled Event

Message Sending Rules

The Market Status Change message is sent:

- Scheduled status changes, event changes or a combination from the previous according to the predefined pattern of Trading Groups/Contracts (i.e. uncrossing of a contract, transition from one session to the next one, ...)

- Unscheduled status changes (i.e. reservation of an instrument, suspension of an instrument, order entry updates ...)

This message is sent on cash at the instrument level and on derivatives at the contract level. However, on derivatives, when an instrument does not follow any more the contract status or follows again the contract status (for example after a reservation), a specific Market Status Change message is sent for the instrument. This happens in the following cases:

- Instrument intra-day creation
- Instrument suspension by Market Operations
- Instrument expiration
- Instrument reservation due to Static Collars
- Instrument reservation due to Future Limit Interruption Protection (FLIP)
- Instrument reservation due to dynamic collar breach
- Instrument reopening following a reservation

A derivative instrument which behaves "normally" (i.e. follows its contract status), is considered to be in a "Scheduled" status.

For Structured Products segment, one Market Status Change message is sent per instrument at each session change (transition from session 1 to session 3 and from session 3 to session 4).

Status changes following the predefined pattern

A Market Status Change (1005) message is sent to notify each phase change or event triggering as defined in the Timetable (1006) message.

On an exceptional basis, scheduled hours of a timetable can be modified by Market Operations. In that case a new Timetable message is sent, and subsequent Market Status Change messages will follow this new pattern.

Following is an example of content that are sent in Market Status Change message through the day.

7.3.10 BF Instrument Suspension (1204)

The **BF Instrument Suspension** (1024) provides instrument status updates for the IBF Optiq segment.

The *Security Condition* provides the latest instrument status.

This message is sent during the trading session whenever the instrument status changes as compared to the initial instrument condition provided by the **BF Instrument Reference** (1201) message or to a previous **BF Instrument Suspension** (1204) message.

7.3.11 Statistics (1009)

This message provides statistics on prices and volumes on an instrument which comprises the following:

- High and Low Prices
- Percentage Variation Previous Close
- Percentage Variation Previous NAV
- Last Traded Price
- Variation Last Price
- Open Price
- Trade Count
- Cumulative quantities

Stats Update Type

The following table lists the statistics available per instrument:

| Stats Update Type | On-exchange on-book ⁶ | | | | | | | | | | | On-exchange off-book | Off-exchange off-book |

⁶ On-Exchange Off-Book (OEOB) covers multiple types of activity, that are identified in the EMM field. References to OEOB below comprise the following EMMs: For the Cash markets: 5 = Cash On Exchange Off book; For the Derivatives markets: 4 = Derivative Wholesales and 7 = Derivative On Exchange Off book.

Valuation prices computation generates some *Stats Update Type* which are identified under the column "Val."

Message Sending Rules

The Statistics message is sent each time a statistic value is modified.

High and Low

- Daily High: Highest traded price for the current trading day (to be calculated with the [Price / Index Level Decimals](#)).
- Daily Low: Lowest traded price for the current trading day (to be calculated with the [Price / Index Level Decimals](#)).
- Lifetime High: Highest traded price for the instrument lifetime for booked trades only (to be calculated with the [Price / Index Level Decimals](#)).
- Lifetime Low: Lowest traded price for the instrument lifetime for booked trades only (to be calculated with the [Price / Index Level Decimals](#)).

■

Note: Leg prices that are calculated by the leg price algorithm following a strategy trade are not taken into account in the High/low values provided.

Cumulative quantities

MDG will deliver 4 (four) cumulative quantity fields that will allow clients to compute all possible statistics based on this. These fields are:

- Off Book Cumulative Quantity: Cumulated volume traded outside the central order book and on regulated market since the start of the current trading session (to be calculated with the Quantity Decimals).
- On Book Auction Cumulative Quantity: Cumulated volume of regulated market trades done in Auction phase since the start of the current trading session (to be calculated with the Quantity Decimals).
- On Book Continuous Cumulative Quantity: Cumulated volume of regulated market trades done in Continuous phase since the start of the current trading session (to be calculated with the Quantity Decimals).
- On and Off Book Cumulative Quantity: Cumulated volume of trades on regulated market (in or outside the central order book) since the start of the current trading session (to be calculated with the Quantity Decimals). This is the sum of Off Book Cumulative Quantity, On Book Auction Cumulative Quantity and On Book Continuous Cumulative Quantity.

Statistics will not be provided for off-exchanges off-book trades. The "Off Book Cumulative Quantity" will only be provided for the on-exchange off-books trades.

Note: Check [...Determine the Statistics On and Off-Book for an instruments \(COB, Wholesales & RFC\)](#) for more information regarding Statistics On and Off Book for Wholesales.

Other Statistics

- Percentage Variation Previous NAV: Percentage of variation for last Net Asset value. Only provided for NAV book.
- Percentage Variation Previous Close: Percentage of variation for price (or index) versus Last Adjusted Closing Price (LACP).
- Variation Last Price: Percentage variation of price with last reference price.
- Last Traded Price: The Last Traded Price indicates the price of last fill on an instrument.
- Open Price: Opening Price of the instrument.
- Trade Count: The number of trades done intra-day on the instrument.
 - For cash it is only for on-book trades.
 - For derivatives it is for both on-book and off-book on exchange.

Decimals for Statistics

For Statistics, the decimal field to apply on the *Stats Update Value* field will depend on the *Stats Update Type* field as follow:

- For prices and index levels, use the *Price/Index Decimals* field for:
 - High and Low (Stats Update Types: 5 to 10)
 - Open Price (Stats Update Type: 15)
 - Last Traded Price (Stats Update Type: 17)
- For quantities, use the *Quantity Decimals* field for:
 - Cumulative Quantities (Stats Update Types: 19 to 23)
- For Ratio, use the *Ratio / Multiplier Decimals* field for:
 - Percentage Variation Previous NAV (Stats Update Type: 1)
 - Variation Last Price (Stats Update Type: 14)
 - Percentage Variation Previous Close (Stats Update Type: 18)

Trade cancellation in statistics

In case of a trade cancellation the statistics message will broadcast all the statistics updates. If the cancellation cancelled the only trade and there is no Valuation Price, then the statistics will be set to null except for the Trade Count and the cumulative quantities.

Statistics after HA (applied both to cash and derivatives)

The first statistics messages after a MDG HA will carry the most accurate and up to date statistics since some trades may not have been persisted (Clients can detect the a MDG restart with the "Packet Flags" when counter on bits between position 1 and 3 changes).

7.3.12 Real Time Index (1008)

A Real-Time Index (1008) message handles the real-time characteristics of an index: the level of the index, type of index level (opening index level, real-time, indicative level) and various indicators for the instruments that make up the index. This message is sent for:

- Stock Indices
- Strategy Indices
- Volatility Indices
- Indicative Net Asset Value (iNAV) of an ETF

Message Sending Rules

Sending of these messages for a given index is conditioned by a flag configured at the index level. These conditions and the nature of these messages that are sent for each index are dependent on two factors:

- The publication mode of the index; there are three publication modes:
 - Continuous: Calculated index levels are published periodically, at a frequency that can be configured for each index. Currently an index that is published continuously can either be published every 15 seconds or every 30 seconds.
 - Discontinuous: A single Closing level (level 5) before the provisional closing phase, occurring at a time (a 'fixed time') that can be configured for each index
 - At closing only: No broadcast before the provisional closing phase
- The current calculation phase of the index

The following sections provide an overview of the different conditions at which an index level can be sent.

At System Start-up

The Closing level of the index of the previous trading day (level 5) is sent at the start of each trading day in the referential.

During the Trading Session

Opening Kinematics

At the reception of the first trade price of any instrument that is part of the composition of the CAC 40, the index moves into the Session phase. If at this point 65% or more of the market cap of the index has traded, the Official Opening level (level 1) is calculated and published. The Official Opening level is based on the last trade prices or the last-adjusted closing price if a last traded price is not available. Subsequently, real-time Session levels (level 2) are calculated and published every 15 seconds.

If, at the opening of the index, less than 65% of the market cap of the index has traded, an Automatic Indicative level (level 3) is published every 15 seconds following the opening of the market until at least 65% of the market cap of the index has traded. Once this threshold of 65% has been reached (and the index is not in the 'Indicative' phase), the Official Opening level (level 1) is calculated and published. Subsequently, real-time Session levels (level 2) are calculated and published every 15 seconds.

For most other French indices, there are two thresholds that need to be reached for the index to send an official opening level:

At the opening of the market, at least 65% of the market cap needs to have traded. If at the opening of the market this threshold of 65% has not been reached, an Automatic indicative level (level 3) is sent every 15 seconds.

The Automatic indicative level continues to be sent every 15 seconds until a second threshold has been reached. For most French indices this second threshold is configured at 95% of the market cap. Once this second threshold has been reached, the Official Opening level (level 1) is calculated and published. Subsequently, real-time Session levels (level 2) are calculated and published every 15 seconds.

If the index remains in an Automatic Indicative state the entire day, the last Automatic Indicative index level (level 3) is considered to be the official close. (There is no official opening level in this case.)

As soon as 100% of the market cap of the non-regulated-halted constituents of the index has traded (and the index is not in 'indicative' state), the Reference level (level 4) is calculated and broadcasted. This level is calculated using only the opening (first trade) prices of its constituents.

Following the Opening

Once the Official Opening level (level 1) has been published, the real-time Session levels (level 2) are calculated and published every 15 seconds.

In the case of an 'Indicative' Phase:

The compiler can decide, following the opening of the index, to change the status of the index. This decision can be made if it is believed that circumstances prevent the proper calculation of the index. In this case, instead of the real-time Session level (level 2), an

indicative level (level 0) is sent every 15 seconds. This level 0 is calculated by using the last-traded price or the last-adjusted closing price if a last traded price is not available.

The index levels that are calculated during the 'Indicative' status of an index are not taken into account to update the highest and the lowest levels of the index.

Once the compiler is sure that the index level is representative again, the real-time index levels (level 2) are calculated and published again every 15 seconds.

Options Liquidation Index (Level 7) for CAC 40

Definition / Purpose

- The liquidation index is used as a basis for the automatic exercise of options that are within the price range on their expiration date, as well as for the calculation of resulting payments.
- It is the average of the index level calculated every 15 seconds between 15:40 (CET) and 16:00 (CET). The result of the calculation is published every 15 seconds during the same time interval.
- This average is sent at each expiry date.

At the End of the Trading Day

When all Index instruments are closed, the index moves into the Temporary Closing phase. On a normal trading day, this occurs around 18:00:00 (CET). During this phase, the first Closing level (level 5), the first confirmation of the Reference level (level 6) and the first Index Summary message (message 1011) are published. During the Temporary Closing phase, Euronext can make any necessary adjustments to the index if deemed necessary. The Temporary Closing phase currently lasts 5 minutes.

At the end of the Closing delay, the index moves into the Final Closing phase. The second Closing level, the second confirmation of the Reference level (level 6) and the second Index summary message (message 1011) are published. Any adjustments that are made during the Temporary Closing Phase are taken into account in the second Closing level and the Index Summary message.

The first and second Closing levels (level 5) are calculated based on the last trades of the instruments that take part in the index. This level represents the official Closing Reference Level of the CAC 40.

The confirmation of the Reference level (level 6) is calculated using only the opening (first trade) prices of its constituents not taking into account any cancellation of opening trades.

AEX Index, BEL 20 Index and PSI 20 Index

At System Start-up

The Closing level of the index of the previous trading day (level 5) is sent at the start of each trading day in the referential.

During the Trading Session

Opening Kinematics

At the reception of the first trade price of any instrument that is part of the composition of the index, the index moves into the Session phase. If at this point 100% or more of the market cap of the index has traded, the Official Opening level (level 1) is calculated and

published. The Official Opening level is based on the last trade prices, including previous day, adjusted closing prices. Subsequently, real-time Session levels (level 2) are calculated and published every 15 seconds.

If by 9:05 the threshold of 100% is still not met, the threshold is dropped to 80% (second threshold). As soon as 80% of the market cap is available any time after 09:05, the Official Opening level (level 1) is calculated and published followed by real-time Session levels (level 2).

From the opening of the index up until the first or second threshold is met, an Automatic Indicative level (level 3) is published every 15 seconds.

If the index remains in an Automatic Indicative state the entire day, the last Automatic Indicative index level (level 3) is considered to be the official close. (There is no official opening level in this case.)

Following the Opening

Once the Official Opening level (level 1) has been published, the real-time Session levels (level 2) are calculated and published every 15 seconds.

In the case of an 'Indicative' Phase:

The compiler can decide, following the opening of the index, to change the status of the index. This decision can be made if it is believed that circumstances prevent the proper calculation of the index. In this case, instead of the real-time Session level (level 2), an indicative level (level 0) is sent every 15 seconds. This level 0 is calculated by using the last-traded price or the last-adjusted closing price if a last-traded price is not available.

The index levels that are calculated during the 'Indicative' status of an index are not taken into account to update the highest and the lowest levels of the index.

Once the compiler is sure that the index level is representative again, the real-time index levels (level 2) are calculated and published again every 15 seconds.

Options Liquidation Index (Level 7) for AEX Index

Definition / Purpose

- The liquidation index is used as a basis for the automatic exercise of options that are within the price range on their expiration date, as well as for the calculation of resulting payments.
- It is the average of the index level calculated every 1 minute between 15:30 (CET) and 16:00 (CET). The result of the calculation is published every minute during the same time interval.

At the End of the Trading Day

When all Index instruments are closed, the index moves into the Temporary Closing phase. On a normal trading day this occurs around 18:00:00 (CET). During this phase, the first Closing level (level 5) and the first Index Summary message (message 1011) are published. During the Temporary Closing phase, Euronext can make any necessary adjustments to the index if deemed necessary. The temporary Closing phase currently lasts 5 minutes.

At the end of the Closing delay, the index moves into the Final Closing phase. The second Closing level (level 5) and the second Index Summary message (message 1011) are

published. Any adjustments that are made during the Temporary Closing Phase are taken into account in the second closing level and the Index Summary message.

The first and second Closing levels (level 5) are calculated based on the last trades of the instruments that take part of the composition of the index. This level represents the official Closing Reference Level of the index.

End of Day Innovative Indices

As there is no Temporary Closing phase for this type of indices then a single **Real Time Index** (1008) message is sent, once the index moved to the final closing phase, to broadcast the closing level (level 5).

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |
|--|---|---------------------------|-----|-------------------------|-----------|
| Market Data Sequence Number | Assigned by MDG for each message. Each channel has its own Market Data Sequence Number sequence. | Sequence | 8 | 0..2 ⁶⁴ -2 | Mandatory |
| Rebroadcast Indicator | Indicates if this message is resent or new (1 if resent, 0 otherwise). For a snapshot, this field will always be set to '1'. | Numerical ID | 1 | 0..2 ⁸ -2 | Mandatory |
| EMM | Defines the Exchange Market Mechanism applied on each platform. | Enumerated | 1 | (See field description) | Mandatory |
| Event Time | Time when an event has been processed | Epoch Time in Nanoseconds | 8 | 0..2 ⁶⁴ -2 | Mandatory |
| Symbol Index | Exchange identification code of the instrument/contract. | Numerical ID | 4 | 0..2 ³² -2 | Mandatory |
| Index Level | The value of the last level for the index that is the subject of this message (to be calculated with the Price/Index Level Decimals). | Price | 8 | (See field description) | Mandatory |
| Percentage of Capitalization | Percentage of capitalization for the active instruments in the index (to be calculated with the Ratio / Multiplier Decimals). | Numerical | 8 | 0..2 ⁶⁴ -2 | Optional |
| Percentage Var from Prev Close | Percentage of variation for last price (or index) versus previous closing price (or closing reference price) (to be calculated with the Ratio / Multiplier Decimals). | Signed Numerical | 8 | (See field description) | Mandatory |

| Index Price Code | Type of Price as positioned in Session High/Low or to indicate the trend or at the contrary the reference value from which the price may change. | Enumerated | 1 | (See field description) | Mandatory |

7.3.13 Index Summary (1011)

The Index Summary (1011) message is sent twice at the end of the day in order to disseminate the final statistics related to an index, which aggregates daily data.

Message Sending Rules

Every trading day, for each index type 'stock index', two types of index summary messages are sent (this rules out iNAV's, End of Day Innovative Indices):

- The first summary is sent when the index enters the provisional closing phase.
- The second summary is sent when the index enters the final closing phase.

End of Day Innovative Indices

As there is no provisional closing phase for this type of indices then a single **Index Summary** (1011) message is sent to indicate that the index moved to the final closing phase.

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |
|---|--|---------------------------|-----|-------------------------|-----------|
| Market Data Sequence Number | Assigned by MDG for each message. Each channel has its own Market Data Sequence Number sequence. | Sequence | 8 | 0..2^64-2 | Mandatory |
| Rebroadcast Indicator | Indicates if this message is resent or new (1 if resent, 0 otherwise). For a snapshot, this field will always be set to '1'. | Numerical ID | 1 | 0..2^8-2 | Mandatory |
| EMM | Defines the Exchange Market Mechanism applied on each platform. | Enumerated | 1 | (See field description) | Mandatory |

| Low Time | Time of provisional lowest index level (Time in number of nanoseconds since 01/01/1970 UTC). | Epoch Time in Nanoseconds | 8 | 0..2 ⁶⁴ -2 | Mandatory |
| Liquidation Level | Index Level of reference at expiration settlement (to be calculated with the Price/Index Level Decimals). | Price | 8 | (See field description) | Optional |
| Liquidation Time | Time of provisional expiration settlement index level (Time in number of nanoseconds since 01/01/1970 UTC). | Epoch Time in Nanoseconds | 8 | 0..2 ⁶⁴ -2 | Optional |

7.4 SNAPSHOT MESSAGES

The Snapshot mechanism uses the same messages as the real-time feed.

When used for the snapshot, the messages have the field *Rebroadcast Indicator* set to "1".

| MESSAGE | PURPOSE | SENDING RULES |
|--|--|--|
| Start Of Snapshot (2101) | Defines the start of a snapshot sequence on all channels | This is the first message of a snapshot sequence. It contains the last Market Data Sequence Number from real-time that is contained in this snapshot sequence. |
| End Of Snapshot (2102) | Defines the end of a snapshot sequence on all channels | This is the last message of a snapshot sequence. It contains the last Market Data Sequence Number from real-time that is contained in this snapshot sequence. |
| Outright Standing Data (1014) Strategy Standing Data (1012) | Provides all the characteristics of instruments | Only intraday instrument creation will be snapshotted. For all other standing data please refer to the file servers. |
| Timetable (1006) | Provides all the scheduled events for the instruments | Only intraday modifications will be snapshotted. Otherwise, use the file servers to retrieve data. |
| Market Status Change (1005) | Notifies of a market status change along with its reason | Only the last applicable Market Status Change per Symbol Index and EMM will be sent. |
| Market Update (1001) for BBO (with Market Data Update Type set to "1" or "2" only) | Provides the Best Bid and the Best Offer for each instrument | Only the last Best Bid and the last Best Offer will be resent. |

| MESSAGE | PURPOSE | SENDING RULES |
|-------------------------------|--|--|
| Start Of Snapshot (2101) | Defines the start of a snapshot sequence on all channels | This is the first message of a snapshot sequence. It contains the last Market Data Sequence Number from real-time that is contained in this snapshot sequence. |
| End Of Snapshot (2102) | Defines the end of a snapshot sequence on all channels | This is the last message of a snapshot sequence. It contains the last Market Data Sequence Number from real-time that is contained in this snapshot sequence. |
| Market Update (1001) | Allows clients to rebuild the book with full depth | Only for market by limits. |
| Order Update (1002) | | Only for market by orders. |
| Price Update (1003) | Provides all last updated reference prices | Only last Price Update, for each Market Data Price Type, will be sent. |
| Full Trade Information (1004) | Provides Trade reporting for last trades | Only last 50 intraday trades and if they are not older than 15 minutes, for the whole instrument set on a given channel will be resent. |
| Statistics (1009) | Provides full statistics per instruments | Only last statistics will be sent. Clients might receive, in snapshot, statistics for an instrument in more than one packet. |
| Index Summary (1011) | Provides end of day index summary | Only the last message will be resent. |
| Real Time Index (1008) | Provides real-time index data | Only the last message will be resent. |

Any message that is not in the above table will not be disseminated using the Snapshot mechanism.

7.4.1 Technical messages in Snapshot channels

Start of Day, Health Status and End of Day are also sent on the snapshot channels. They are not part of the Snapshot Sequence and should be processed separately by the clients. Customers need to take into account that they can also be sent between a Start of Snapshot and an End of snapshot messages.

In the Health Status, still on the snapshot channels, the Market Data Sequence Number is the MDSN of the last message sent by the aggregator of this channel. Please note that this Market Data Sequence Number may be different from the Last Market Data Sequence Number in the Start / End of Snapshot messages that matches the last real time message taken into account to build the snapshot.

7.4.2 Snapshot Sequence behaviour

The snapshot sequences start as soon as MDG is ready to broadcast messages (and not after the first real-time message is sent on the real-time channels) and stops only when MDG stops. So, Start of Day, Health Status and End of Day messages will be sent along with the snapshots at the beginning of the day, during the day and at the end of the day respectively. At the beginning of the day the snapshots will contain only Start of Snapshot and End of

Snapshot messages with no snapshotted messages in between and the Market Data Sequence Number in Start of Snapshot and End of Snapshot will be set to null.

The minimum period between two snapshot sequences for a given channel is set to 2 seconds all along the day.

The snapshot sequence provides messages for all instruments of the channel at the same time, as opposed to instrument by instrument.

7.4.3 Start Of Snapshot (2101)

Provides the Market Data Sequence Number of the last real-time message processed for this snapshot.

Last Market Data Sequence Number is set to null at the beginning of the day until another message than Start Of Day (1101) is broadcasted.

Message Sending Rules:

Start Of Snapshot message is always the first message of a snapshot sequence, and indicates the beginning of a snapshot sequence.

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |
|--|---|---------------------------|-----|-----------------------|-----------|
| Last Market Data Sequence Number | Indicates the Market Data Message Sequence Number of the last real-time message processed for this snapshot. | Sequence | 8 | 0..2 ⁶⁴ -2 | Optional |
| Snapshot Time | Indicates the time when snapshot generation has respectively started/ended in the Start Of Snapshot/End Of Snapshot message (Time in number of nanoseconds since 01/01/1970 UTC). | Epoch Time in Nanoseconds | 8 | 0..2 ⁶⁴ -2 | Mandatory |

7.4.4 End Of Snapshot (2102)

The End Of Snapshot (2102) message indicates the end of a snapshot sequence.

It provides the Market Data Sequence Number of the last real time message processed for this snapshot. It also indicates that processing queued messages from the real-time feed with a higher Market Data Sequence member is now possible.

Message Sending Rules

End Of Snapshot message is always the last message of a snapshot sequence.

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |
|--|--|----------|-----|-----------------------|----------|
| Last Market Data Sequence Number | Indicates the Market Data Message Sequence Number of the last real-time message processed for this snapshot. | Sequence | 8 | 0..2 ⁶⁴ -2 | Optional |

| FIELD | SHORT DESCRIPTION | FORMAT | LEN | VALUES | PRESENCE |
|-------------------------------|---|---------------------------|-----|-----------------------|-----------|

8. FIELD DESCRIPTION

A

Amount Decimals

| FIELD NAME | AMOUNT DECIMALS |
|-----------------|---|
| Description | Indicates the number of decimals for each Amount related to this Symbol Index |
| Format | Decimal Places (unsigned integer 8) |
| Length | 1 |
| Possible Values | 0..2 ⁸⁻² Null value: 2 ⁸⁻¹ |
| Used In | Standing Data (1007) Contract Standing Data (1013) BF Instrument Reference (1201) |
| User For | Cash and Derivatives |

Anonymous

| FIELD NAME | ANONYMOUS |
|-----------------|---|
| Description | Indicates if the Market Data notifications on the instrument are anonymous or not. (0: Non Anonymous – Member Firm ID published ; 1: Anonymous – Member Firm ID not published). |
| Format | Boolean |
| Length | 1 |
| Possible Values | 0 Non Anonymous 1 Anonymous |
| Used In | Standing Data (1007) |

B

Bid/Offer Date Time

| FIELD NAME | BID/OFFER DATE TIME |
|-----------------|---|
| Description | Date/time of bid/offer, expressed as number of nanoseconds since Epoch. |
| Format | Epoch Time in Nanoseconds (unsigned integer 64) SBE: unsigned integer 64 |
| Length | 8 |
| Possible Values | 0..2 ⁶⁴⁻² Null value: 2 ⁶⁴⁻¹ |
| Used In | BF Trade (1202) BF NAV (1203) |
| User For | Cash and Derivatives |

Bid Px

| FIELD NAME | BID PRICE |
|-----------------|--|
| Description | Quote bid price, (To be calculated with Price/Index Level Decimals). |
| Format | Quote bid price (to be calculated with Price/Index Level Decimals). |
| Length | 8 |
| Possible Values | From -2^{63-1} to 2^{63-1} |
| Used In | BF Trade (1202) |
| User For | Cash and Derivatives |

Block Length

| FIELD NAME | BLOCK LENGTH |
|-----------------|---|
| Description | Length of the block. The Block is the message without the repeating sections. This is especially useful for new message versions in the case Exchange adds fields at the end of the block. Clients will remain able to process the block fields and know where the repeating sections starts. |
| Format | Numerical (unsigned integer 16) |
| Length | 2 |
| Possible Values | $0..2^{16-2}$ Null value: 2^{16-1} |
| Used In | SBE Header |
| User For | Cash and Derivatives |

Block Trade Code

| FIELD NAME | BLOCK TRADE CODE |
|-----------------|--|
| Description | Indicates if trade relates to a block or a negotiated deal following EU and UK MiFID II rules. |
| Format | Enumerated (character) |
| Length | 1 |
| Possible Values | B Block Trade N Regular trade or Negotiated deal - (Hyphen) Undefined |
| Used In | Full Trade Information (1004) |

Book State

| FIELD NAME | BOOK STATE |
|-------------|---|
| Description | Indicates the state of the book resulting of the current timetable phase, current contract/instrument state and current contract/trading group state. |

| FIELD NAME | BOOK STATE |
|-----------------|--|
| Format | Enumerated (unsigned integer 8) |
| Length | 1 |
| Possible Values | 1 Inaccessible 2 Closed 3 Call 4 Uncrossing 5 Continuous 6 Halted 7 Continuous Uncrossing (Warrants and Certificates Only) 8 Suspended 9 Reserved Null value: 2^8-1 |
| Used In | Market Status Change (1005) |

Closing Price

| FIELD NAME | CLOSING PRICE |
|-----------------|---|
| Description | Previous day's closing price (to be calculated with the Price / Index Level Decimals). |
| Format | Price (signed integer 64) |
| Length | 8 |
| Possible Values | From $-2^{63}-1$ to $2^{63}-1$ |
| Used In | BF Instrument Reference (1201) |
| User For | Derivatives |

Closing Reference Level

| FIELD NAME | CLOSING REFERENCE LEVEL |
|-----------------|---|
| Description | Reference closing index level. This level corresponds to the Index Level Type 5 of the message Real Time Index (1008) of the corresponding index (to be calculated with the Price/Index Level Decimals). |
| Format | Price (signed integer 64) |
| Length | 8 |
| Possible Values | $-2^{63}+1..2^{63}-1$ Null value: -2^{63} |

Currency Coefficient

| | |
|-------------|---|
| | |
| Description | When an actual price is displayed in a different 'price expression' than the official instrument trading currency, the Currency Coefficient represents the ratio 'price expression' divided by 'official currency' (To be calculated with Ratio / Multiplier Decimals). For example a UK-listed instrument with its trading currency GBP having a price expressed in Pence, the Currency Coefficient will be 0.01 expressed with Currency Coefficient set to 1 and Ratio / Multiplier Decimals set to 2. The Currency Coefficient may be used for the Instrument Trading Price (the Referential field Trading Currency Indicator is then set to 1), and/or for the Derivatives and Warrants Instrument Strike Price (the Referential field Strike Currency Indicator is then set to 1). |

| FIELD NAME | LEG LAST TRADED QUANTITY |
|-----------------|--|
| Description | Indicates the quantity of the trade for the leg (to be calculated with the Quantity Decimals). |
| Format | Price (unsigned integer 64) |
| Length | 8 |
| Possible Values | 0..2 ⁶⁴ -2 |
| Used In | LIS Package Structure (1016) |
| Used For | Derivatives |

Leg Price

| FIELD NAME | LEG PRICE |
|-----------------|---|
| Description | Price of corresponding strategy leg (to be calculated with the Price/Index Level Decimals). |
| Format | Price (signed integer 64) |
| Length | 8 |
| Possible Values | $-2^{63}+1..2^{63}-1$ Null value: -2^{63} |
| Used In | Strategy Standing Data (1012) |
| User For | Derivatives |

Leg Ratio

| FIELD NAME | LEG RATIO |
|-----------------|--|
| Description | Ratio of lots for the leg. For contingent trades, the delta. <ul style="list-style-type: none"> ■ For Contracts (Future or Option), it is the leg ratio, with the maximum value being 99999. If the value submitted by a customer is higher, it will be changed by the system to the maximum value (99999). ■ For Underlyings (Cash or Future), the delta is used with special rules: For the Underlying leg of volatility strategies, this should be the delta represented directly as an integer value of the percentage, without division or decimals (e.g.: a delta of 65% should be represented by 65), with the maximum value being 9999 (9999%). If the value submitted by a customer is higher, it will be changed by the system to the maximum value (9999). For Conversion Reversal Strategies (Type = 'R'), the delta is always set to 100. |
| Format | Quantity (unsigned integer 32) |
| Length | 4 |
| Possible Values | $0..2^{32}-2$ Null value: $2^{32}-1$ |
| Used In | Strategy Standing Data (1012) LIS Package Trade (1016) |
| User For | Derivatives |

Leg Symbol Index

| FIELD NAME | LEG SYMBOL INDEX |
|-----------------|--|
| Description | MDG proprietary identification code of the instrument leg for the strategy. This identifier is unique per triplet: MIC, ISIN and currency. Once the instrument is expired its number can be used for a new instrument. |
| Format | Numerical ID (unsigned integer 32) |
| Length | 4 |
| Possible Values | $0..2^{32}-2$ Null value: $2^{32}-1$ |
| Used In | Strategy Standing Data (1012) LIS Package Trade (1016) |

Liquid Instrument Indicator

| FIELD NAME | LIQUID INSTRUMENT INDICATOR |
|-----------------|---|
| Description | Indicates whether the instrument is liquid or not, as defined per EU and UK MiFID II. (0 = Illiquid ; 1 = Liquid) |
| Format | Boolean (unsigned integer 8) |
| Length | 1 |
| Possible Values | 0..2 ⁸⁻² Null value: 2 ⁸⁻¹ |
| Used In | Standing Data (1007) |

Liquidation Level

| FIELD NAME | LIQUIDATION LEVEL |
|-----------------|---|
| Description | Index Level of reference at expiration settlement (to be calculated with the Price/Index Level Decimals). |
| Format | Price (signed integer 64) |
| Length | 8 |
| Possible Values | -2 ⁶³ +1..2 ⁶³ -1 Null value: -2 ⁶³ |
| Used In | Index Summary (1011) |
| User For | Cash |

Liquidation Time

| FIELD NAME | LIQUIDATION TIME |
|-----------------|---|
| Description | Time of provisional expiration settlement index level (Time in number of nanoseconds since 01/01/1970 UTC). |
| Format | Epoch Time in Nanoseconds (unsigned integer 64) SBE: unsigned integer 64 |
| Length | 8 |
| Possible Values | 0..2 ⁶⁴⁻² Null value: 2 ⁶⁴⁻¹ |
| Used In | Index Summary (1011) |

Lot Multiplier

| FIELD NAME | LOT MULTIPLIER |
|-------------|---|
| Description | Amount of underlying instrument per unit of a derivative contract (to be calculated with the Ratio / Multiplier Decimals). Due to corporate actions, the value may be different between value provided within this field in Contract Standing Data and Outright Standing Data. Value in Outright Standing Data reflects the adjustment due to the corporate action and should be used for that Outright instrument. Lot Multiplier field is used instead of Trading Unit , because Lot Multiplier supports decimals. |

Strike Price Decimals Ratio

| FIELD NAME | STRIKE PRICE DECIMALS RATIO |
|-----------------|---|
| Description | In Outright section only, it is used to determine the number of decimals for the Strike Price in the Derivatives Instrument Trading Code (AMR code). Following a corporate event, the value may be updated. |
| Format | Numerical (unsigned integer 8) |
| Length | 1 |
| Possible Values | 0..2 ⁸⁻² Null value: 2 ⁸⁻¹ |
| Used In | Contract Standing Data (1013) |
| User For | Derivatives |

Symbol Index

| FIELD NAME | SYMBOL INDEX |
|-----------------|--|
| Description | Exchange identification code of the instrument/contract. This identifier is unique per triplet: MIC, ISIN and currency. The correspondence of the Symbol Index and with the instrument characteristics is provided in the standing data messages and associated files. Symbol Index is valid for the life of the instrument. |
| Format | Numerical ID (unsigned integer 32) |
| Length | 4 |
| Possible Values | 0..2 ³²⁻² Null value: 2 ³²⁻¹ |
| Conditions | For inbound messages, the Symbol Index must be specified. For second listing place trade, the Symbol Index and the MIC of secondary listing must be specified. If provided in the User Notification (39) message, it specifies the scope of the action specified in User Status. In the Reject (07) message, it is populated only if provided as a valid value in the corresponding Inbound request AND the corresponding Inbound request was technically correctly formatted; otherwise it is provided at the Null value. Field not populated in Reject (07) messages for rejection of strategy creation on derivatives markets. For all messages, with exception of MM sign-in and MM protection, this field represent the Symbol Index of the Instrument. For the MM sign-in and MM protection this field represents the Symbol Index of the Contract. For wholesale order this represents numerical leg instrument identifier (Security ID). |

Trading Unit

| FIELD NAME | TRADING UNIT |
|-----------------|---|
| Description | Amount of underlying instrument per unit of a derivative contract (to be calculated with the Quantity Decimals). Due to corporate actions, the value may be different between value provided within this field in Contract Standing Data and Outright Standing Data. Value in Outright Standing Data reflects the adjustment due to the corporate action and should be used for that Outright instrument. Trading Unit field does not support decimals and so Lot Multiplier field is introduced to handle integer and decimals. Lot Multiplier field should be used instead of Trading Unit. Trading Unit field is, therefore, populated only for Euronext legacy contracts and instruments. |
